LUPUS CLINIC INFORMATION SYSTEM (LuCIS)

A Special Problem in partial fulfillment
of the requirements for the degree of
Bachelor of Science in Computer Science

Submitted by:

Therese Rosario A. Marcelo
April 2008

ACCEPTANCE SHEET

The Special Problem entitled “Lupus Clinic Information System (LuCIS)” is prepared and submitted by Therese Rosario A. Marcelo in partial fulfillment of the requirements for the degree of Bachelor of Science in Computer Science has been examined and is recommended for acceptance.

Ma. Sheila A. Magboo, MS
Adviser

ABSTRACT

A clinic information system is a computer based system that is designed for collecting, storing, manipulating and making available clinical information important to the healthcare delivery process.

A clinic information system has been developed for lupus clinics to replace the paper-based system of recording, updating and retrieving medical records. This system is equipped with functionalities that will lessen the burden of the person administering the patient records.

Aside from serving as storage of medical records, LuCIS also includes disease activity calculators that compute for the lupus scores based on the four commonly used disease activity indices such as SLEDAI, SLAM, ECLAM and BILAG. These scores are useful in evaluating the status of lupus in the patient. In addition, the import/export facility of LuCIS allows the integration of lupus data from other clinics' LuCIS database to the clinic's own LuCIS database. This allows the physician/ researcher to increase the number of subjects involved in his study. Searching based on different lupus data can also be done in LuCIS. Lastly, its SMS facility answers the problem of reducing the "did-not-attend" incidences during check-ups and lupus meetings, and helps improve the ability of the clinic to provide efficient service.

The issue of confidentiality in LuCIS is upheld since the system can be accessed only within the clinic. This makes the system protected from illegal entry of non-authorized users and corruption of data. Moreover, authorized users have different user privileges so confidentiality of the patient information is still ensured even within the clinic.

Keywords: Clinic Information System, Medical Consultation Record, Lupus

I. INTRODUCTION

A. Background of the study

Lupus is a chronic autoimmune inflammatory multi-system disease of unknown cause that manifests itself in approximately 1/2000 individuals. Although lupus is a disease of women during the childbearing years of 15 to 45, the disease has manifested itself in young and elderly, male and female patients of every ethnicity [1].

Prevalence extrapolation for Lupus in the Philippines is estimated to be around 443,891 [2]. Usually, when these patients come to a rheumatology clinic, their demographic data, health history, clinical assessment results, laboratory test results and medication dosages are manually recorded, updated and retrieved. However, the problem with the manual way of keeping medical records is that it is slow, tedious and prone to misplacement or even loss of the records.

Currently, there is commercially available software that tracks the health, well-being and medication of lupus patients. This proprietary software is called British Lupus Integrated Prospective System (BLIPS). Basically, it serves a storehouse of patient records. Furthermore, it allows the user to graph and monitor laboratory results as well as drug dosages, and perform searching based on clinical assessment.

Patient failure to attend hospital outpatient appointments has a significant impact on the ability of hospitals to provide efficient and effective outpatient services. The high failure to attend (FTA) rate results in suboptimal utilisation of clinical and administrative staff, and reduced of revenue opportunities. The patients, who are most likely to forget, or not bother to turn up for appointments, fall within the 16 to 35 age group. By coincidence, people in this age group are heavy users of mobile phones and text messaging. At present, there are outpatient clinics that utilize SMS technology to remind the patients of their check-up schedules. Reports reveal that SMS patient reminder systems have reduced some outpatient clinics' does-not-attend rates by up to 30% [3].

B. Statement of the problem

The current manual system of recording, updating and retrieving medical records is slow and tedious. In addition, it brings about the possibility of loss or misplacement of medical records, which are essential in assessing and monitoring the health and well-being of the lupus patient. Although there is an alternative for hospitals/ clinics to use the proprietary software BLIPS, that idea is still not much preferred because BLIPS is very expensive, not user friendly and requires long time for encoding patient information.

In addition to keeping the medical records efficiently, there is also a need to address the problem of reminding the patient and physician of their check-up and lupus meeting schedules. Patient failure to attend hospital outpatient appointments has a significant impact on the ability of hospitals to provide efficient and effective outpatient service.

C. Objectives

Main Objectives

The objective of the proposal is to create an information system that would store medical records in a database that can be accessed through the hospital's intranet, to provide a disease activity calculator based on four disease activity indices, to incorporate an import/export facility for the integration of data from other clinics that can be used for research purposes, and to incorporate an SMS reminder application that would alert the patients and attending physicians of their check-up schedules and lupus meeting dates.

Specific Objectives

To create Lupus Clinic Information System (LuCIS) with the following functionalities:

- 1) allows the physician to perform the following functionalities on his patients only:

- a)** add medical consultation records which include:
 - a.1) demographics
 - a.2) chief complaint
 - a.3) history of present illness
 - a.4) birth and development history
 - a.5) menstrual history
 - a.6) personal and social history
 - a.7) disease prevention measures
 - a.8) past medical history
 - a.9) review of systems
 - a.10) laboratory exam results
 - a.11) physical exam results
 - a.12) case summary (subjective/objective/assessment/plans)
 - a.13) check-up schedule,
 - b) save an unfinished medical consultation record as draft,
 - c) finalize a draft medical consultation record,
 - d) fill-out disease activity index forms using the following disease activity indices: Systemic Lupus Erythematosus Disease Activity Index (SLEDAI), British Isles Lupus Assessment Group (BILAG), Systemic Lupus Activity Measure (SLAM) and European Consensus Lupus Activity Measurement (ECLAM),
 - e) view medical records, current disease activity scores and progress charts based on the SLEDAI, BILAG, SLAM and ECLAM disease activity indices,
 - f) view check-up schedules and Lupus meeting dates,
 - g) generate consultation summary
 - h) generate summary reports including all Lupus patients (grouped by age, gender, etc.),
 - i) change password,
- 2) allows the clerk to perform the following functionalities in behalf of the physician:

- a) add medical consultation records which include:
 - a.1) demographics
 - a.2) chief complaint
 - a.3) history of present illness
 - a.4) birth and development history
 - a.5) menstrual history
 - a.6) personal and social history
 - a.7) disease prevention measures
 - a.8) past medical history
 - a.9) review of systems
 - a.10) laboratory exam results
 - a.11) physical exam results
 - a.12) case summary (subjective/objective/assessment/plans)
 - a.13) check-up schedule,
 - b) fill-out disease activity index forms using the following disease activity indices: SLEDAI, BILAG, SLAM, ECLAM,
 - c) save an unfinished medical consultation record as draft,
 - d) view check-up schedules and Lupus meeting dates,
 - e) change password,
- 3) allows system administrator:
- a) set LuCIS settings,
 - b) set the default lupus meeting schedule,
 - c) set the number of days allowed for a consultation record to remain as draft. After which, the consultation record will be automatically finalized
 - d) add/ activate/ deactivate a user account,
 - e) import the LuCIS database of other clinics for research purposes,
 - f) export the LuCIS database for other clinics' research purposes,
 - g) view an audit trail of transactions, particularly the editing of finalized medical consultation records, made within the system,
 - h) view check-up schedules and Lupus meeting dates,
- 4) the system will generate and send SMS reminders to patients and physicians regarding their check-up schedules and lupus meeting dates

D. Significance

LuCIS will allow for a more simplified, user-friendly and customized implementation that will suit the needs of the clinic. With LuCIS, the clinic can track their patient's health, well-being and medication. Furthermore, the import/ export facility of LuCIS will allow for the integration of data from other clinics that may be used in research studies. A reminder system via SMS shall also be incorporated into LuCIS in order to remind efficiently the patients and physicians of their check-up schedules and lupus meeting dates.

E. Scope and limitations

- 1) Users who will use data from existing BLIPS database or other databases know how to export data into a format that can be imported into LuCIS.
- 2) LuCIS database will be imported/ exported as an Excel file.
- 3) Patients and physicians cannot query the system via SMS.
- 4) LuCIS will only include the most commonly used disease activity indices such as SLEDAI, SLAM, ECLAM and BILAG.

F. Assumptions

- 1) It is assumed that the end-users of the system (physicians, clerks, system administrator) have received proper training on the use of LuCIS.
- 2) Patients with mobile phones may subscribe to LuCIS' SMS reminder system.
- 3) SMS reminders regarding check-up schedules will be sent twice (two days and a day before the check-up schedule). Lupus meeting reminders will be sent a day before the lupus meeting.
- 4) The default lupus meeting date is scheduled on the first Saturday of each month.
- 5) It is the responsibility of the patient/ physician to notify the clerk/ system administrator regarding the changes in mobile phone numbers.
- 6) Clerks can add old medical records only. These refer to those records that were present prior to the implementation of LuCIS.

- 7) Only the patient's physician may finalize the medical consultation record. It is also his duty to error check whatever is in the medical consultation record.
- 8) A system administrator who happens to be a physician or clerk will have two user accounts, that is, as a system administrator and as a physician or clerk.

II. REVIEW OF RELATED LITERATURE

Missed appointments or “Did Not Attends” (DNAs) represent a substantial cost for both public and private healthcare service providers. Using Outpatient Reminder and Paging System (ORPS), the interactive outpatient reminder system, a novel and cost effective method of dealing with patient DNA has been addressed. The technological capabilities are transparent at all times to both users and patients, with the overall benefit of ORPS being a reduction of DNAs due to notification close to appointment times. The additional facility of offering confirmation via a text based routine allows hospitals to reorganize resources in a cost effective manner [4].

In today's health care, an increasing number of automated information systems are used to support the process of health care delivery. Until now, the impact of these systems on health care costs and health care outcome, are seldom assessed. However, more and more evidence regarding the impact and effectiveness of these systems are required. Many automated information systems are aimed to support the information infrastructure of a health care institution. They should make information better and faster available and/or make the management of information less labor intensive.

The effects of the automated information system are investigated at the dermatology outpatient clinic of the university hospital of Leiden. To analyze whether changes in the duration of activities of the receptionists can be translated into e.g. personnel savings and/or reduced patient waiting times, a simulation model of the dermatology outpatient clinic has been developed. Simulations of the dermatology outpatient clinic show a good approximation of the waiting times. For 6 out of 7 consultation rooms the results of the simulations fall within the 95% confidence interval of the measured waiting times [5].

C-DAC's Sushrut, a Hospital Information System (HIS) has been developed with the objective of streamlining the treatment flow of a patient in the hospital, while allowing doctors and other staff to perform to their peak ability, in an optimized and efficient manner. The HIS developed by C-DAC is modular, thus ensuring sustained benefits through changes in technology, protecting and providing optimal returns from the investment. It is modeled on a unique combination of a 'patient centric and medical staff centric' paradigm, beneficial to the recipients and the providers of healthcare [6].

HealthSpan is an integrated health information system used to streamline the care of patients seen at the Brody School of Medicine at East Carolina University and Pitt County Memorial Hospital. It combines an electronic medical record, computerized physician order entry, pharmacy and other health care applications. It was made by Epic Systems, and Brody, PCMH and other components of University Health Systems of Eastern Carolina uses it [7].

PreMIS is a pre-hospital electronic medical records system for North Carolina. It is much more than a database of EMS information. PreMIS was designed from its very foundation to be a critical link to the future of EMS. PreMIS provides a method for each EMS provider in North Carolina to enter patient care data into a central database. There are four methods of data entry into the PreMIS database: 1) web browser using the internet, 2) customized application on a PDA, 3) a written form that will be faxed into the database, and 4) import from an established database into the PreMIS database. Other components of PreMIS include: billing export capabilities, technician and provider tracking, and an extensive quality management toolkit [8].

Another example of a record system is COSTAR (Computer- Stored Ambulatory Record), one of the earliest ambulatory care record systems developed at Massachusetts General Hospital in Boston. It allows patient registration and scheduling, storage and retrieval of clinical data, and financial capabilities such as billing. The core COSTAR system is in the public domain so that other vendors and institutions can modify and enhance it. Another well-known ambulatory system is the Regenstrief Medical Record System at Indiana University which implements similar functions but is also well-known for its capacity for physician decision support.

There have also been a number of long-standing EMR systems for hospitals. The HELP (Health Evaluation through Logical Processing) system was developed at the University of Utah and Latter-Day Saints (LDS) Hospital in Salt Lake City. Similar to the Regenstrief system, it attempts to actively assist physician decision-making by providing alerts of potentially problematic situations and reminders for routine care [9].

Other examples of electronic medical record systems are Turbo-Doc, ChartLogic EMR and VisTA. Turbo-Doc is an electronic medical record system designed to assist physicians and other health care workers in completing medical record tasks. Its goal is to develop and provide tools that save time as well as money while improving and facilitating patient care. Using the combination of powerful, easy to learn, customizable software, portable laptop computers, PDAs and the Internet, physicians can eliminate transcription costs as well as save the physician time [10].

ChartLogic EMR is a feature-rich, physician voice driven, comprehensive EMR that is usable by anyone in the practice. Its precision voice technology allows its clients the most flexible and encompassing way to complete patient notes and enter data into an EMR. Precision Voice eliminates the need for transcription completely, providing monthly savings almost immediately as well as ensuring the highest level of accuracy. Aside from the said feature, ChartLogic EMR also has messaging, patient tracker, diagnosis director and prescription writer [11].

The Veterans Health Information Systems and Technology Architecture (VistA) is an enterprise-wide information system built around an electronic health record, used throughout the United States Department of Veterans Affairs (VA) medical system, known as the Veterans Health Administration (VHA). By 2001, the VHA was the largest single medical system in the United States, providing care to 4 million veterans, employing 180,000 medical personnel and operating 163 hospitals, over 800 clinics and 135 nursing homes. By providing electronic health records capability, VistA is thereby one of the most widely used EHRs in the world [12].

III. THEORETICAL FRAMEWORK

A. Lupus

Lupus is a chronic autoimmune inflammatory multi-system disease of unknown cause. It commonly occurs in women during the childbearing years of 15- 45. Women are affected ten times more often than men in this age group [13]. The disease is common among Orientals and Blacks.

There are four different forms of lupus. The type most commonly seen in older individuals is related to lupus induced by drug exposure. This is usually a brief illness, especially if one recognizes the offending medication and it is stopped. The second type of lupus occurs only on the skin. This is called the discoid lupus and this rash can lead to permanent scarring of the skin. The third type of lupus is the systemic form, which is the most serious form that can affect multiple systems in the body which may include- the skin, joints, blood, lungs, kidneys, heart, brain and nervous system. The systemic form is almost always associated with the antibodies, which are detected in the blood as representatives of the immune system going haywire. Lastly, the systemic form of lupus can also be part of an overlap syndrome that includes problems from more than one type of rheumatic autoimmune disorders such as lupus and rheumatoid arthritis [14].

Lupus has protean and often complex manifestations, which necessitates careful clinical assessment. It is important to remember that not all clinical problems reported by a lupus patient are due to the disease. While some may be a consequence of therapy, others may be unrelated to lupus. Therefore, it is important to understand the totality of the effect of the disease on the patient [15].

B. Disease Activity Index

Disease activity and lupus cannot be measured directly by using any individual laboratory value or clinical sign. Thus, disease activity measures have been developed for lupus. Lupus is usually assessed with complex disease activity scores comprising a variety of different parameters. Among the commonly used disease activity indices are SLEDAI, ECLAM, SLAM and BILAG.

1) Systemic Lupus Erythematosus Disease Activity Index (SLEDAI)

The SLEDAI measures disease activity by weighting the importance of each organ system involved. The scale consists of 24 weighted attributes, grouped into 9 domains, called organ systems (weightings in parentheses): central nervous system (8), vascular (8), renal (4), musculoskeletal (4), serosal (2), dermal (2), immunologic (2), constitutional (1), and hematologic (1). If during a 10-day period prior to the assessment, a patient fulfills an attribute, then the corresponding weighted score will be given. The sum of all weighted attribute scores comprises the final SLEDAI score. Final SLEDAI scores range between 0 and 105, with 0 being no disease activity [16].

2) European Consensus Lupus Activity Measurement (ECLAM)

The ECLAM is a measure of disease activity for adult SLE that has been developed in a group process. It consists of 34 items grouped into 12 domains. The domains and attributes are as follows: 1) generalized manifestations ; 2) articular manifestations; 3a) active mucocutaneous manifestations; 3b) evolving mucocutaneous manifestations; 4) myositis; 5) pericarditis; 6) intestinal manifestations; 7) pulmonary manifestations; 8) evolving neuropsychiatric manifestations; 9a) renal manifestations; 9b) evolving renal manifestations; 10) hematologic manifestations; 11) erythrocyte sedimentation rate; 12a) hypocomplementemia; and 12b) evolving hypocomplementemia.

The final ECLAM disease activity score is always an integer number between 0 and 10 and does not correspond to the sum of the domain scores. Several rules are to be considered when calculating the final ECLAM disease activity score [16]:

- a) If disease activity is present in only 1 of the items of the organ systems 1-10 (as numbered above), then 2 scores are added to the sum of the domain score,
- b) Sums of non-integer domain scores under 6 are rounded down to the next lower integer,

- c) Sums of non-integer domain scores between 6 and 10 are rounded up to the next higher integer,
 - d) All sums of domain scores greater than 10 are rounded off to 10 to obtain the final ECLAM disease activity score.
- 3) Systemic Lupus Activity Measure (SLAM)
- SLAM is a system proposed by rheumatologists to measure disease activity in their patients with systemic lupus erythematosus. It involves scoring a group of clinical symptoms and laboratory findings, the maximum possible score being 84. In systemic LE, the mid-point is between 9 and 12 [17].
- 4) British Isles Lupus Assessment Group (BILAG)

The BILAG index is a clinical measure of lupus disease activity. It has been shown to be comprehensive, valid, reliable and sensitive to change. The scoring system for the BILAG index of disease activity is based upon the principle of the physician's intention to treat. In BILAG index, the disease activity in different organs/ systems is reported separately. There are eight systems: general, mucocutaneous, neurological, musculoskeletal, cardiorespiratory, vasculitis, renal and haematological. A score is calculated for each system depending on the clinical features present and whether they are new, worse, the same or improving in the last 4 weeks compared with previously.

The most severe features in each system, which are deemed to require high dose steroids (prednisolone>20 mg daily or equivalent) and/or cytotoxic agents, characterize an A score. One or more features may have to be present to score an A, depending on the system. More moderate disease items that would be considered appropriate to treat with lower dose steroids, antimalarials or non-steroidal anti-inflammatory drugs (NSAIDs) contribute to a B score. Mild symptomatic features that require just symptomatic therapy, for example with analgesics and NSAIDs, can only contribute to a C score. If there are no current symptoms but the system has previously been involved then a D is recorded. If the system has never been

involved, it is scored E. A severe flare of lupus has been defined as a new score of A in any system and a moderate flare has been defined as a score of B in any system which previously scored D or E [18].

C. Clinical Information System

A Clinical Information System (CIS) is a computer based system that is designed for collecting, storing, manipulating and making available clinical information important to the healthcare delivery process.

Clinical Information Systems provide a clinical data repository that stores clinical data such as the patient's history of illness and the interactions with care providers. The repository encodes information capable of helping physicians decide about the patient's condition, treatment options, and wellness activities as well as the status of decisions, actions undertaken and other relevant information that could help in performing those actions [19]. CIS also includes decision support programs (such as clinical guidelines and drug interaction checking) and communication tools such as electronic messaging systems.

D. Medical record

A medical record or health record is a systematic documentation of a patient's medical history and care. The term medical record refers to both the physical folder for each individual patient and to the body of information which comprises the total of each patient's health history. The information contained in the medical record allows health care providers to provide continuity of care to individual patients. The medical record also serves as a basis for planning patient care, documenting communication between the health care provider and any other health professional contributing to the patient's care [20].

Basically, it contains the demographics, chief complaint, history of present illness, present medications, past medical history, family history, review of systems, physical exam, laboratory results, clinical assessment results, therapeutic plans and medications.

E. Database System

A database is a structured collection of records or data that is stored in a computer system so that a computer program using a query language can consult it to answer queries. The records retrieved in answer to queries are information that can be used to make decisions. The computer program used to manage and query a database is known as a database management system [21].

Schema is the structural description of the type of facts held in a database. It describes the objects that are represented in the database, and the relationships among them. A common model for organizing a schema is the relational model, which represents all information in the form of multiple related tables, each consisting of rows and columns. This model represents relationships by the use of values common to more than one table.

F. Short Message Service

SMS stands for Short Message Service. It is a technology that enables the sending and receiving of messages between mobile phones. The data that can be held by an SMS message is very limited. One SMS message can contain 160 characters if 7-bit character encoding is used or 70 characters if 16-bit Unicode UCS2 character encoding is used.

The SMS specification has defined a way for a computer to send SMS messages through a mobile phone or GSM/GPRS modem. A GSM/GPRS modem is a wireless modem that works with GSM/GPRS wireless networks. Most mobile phones can be used as a wireless modem [22].

IV. DESIGN AND IMPLEMENTATION

A. Entity Relationship Diagram

The Entity Relationship Diagram of LuCIS is shown in Figure 1. LuCIS recognizes the physician, the clerk and the system administrator as its authorized users.

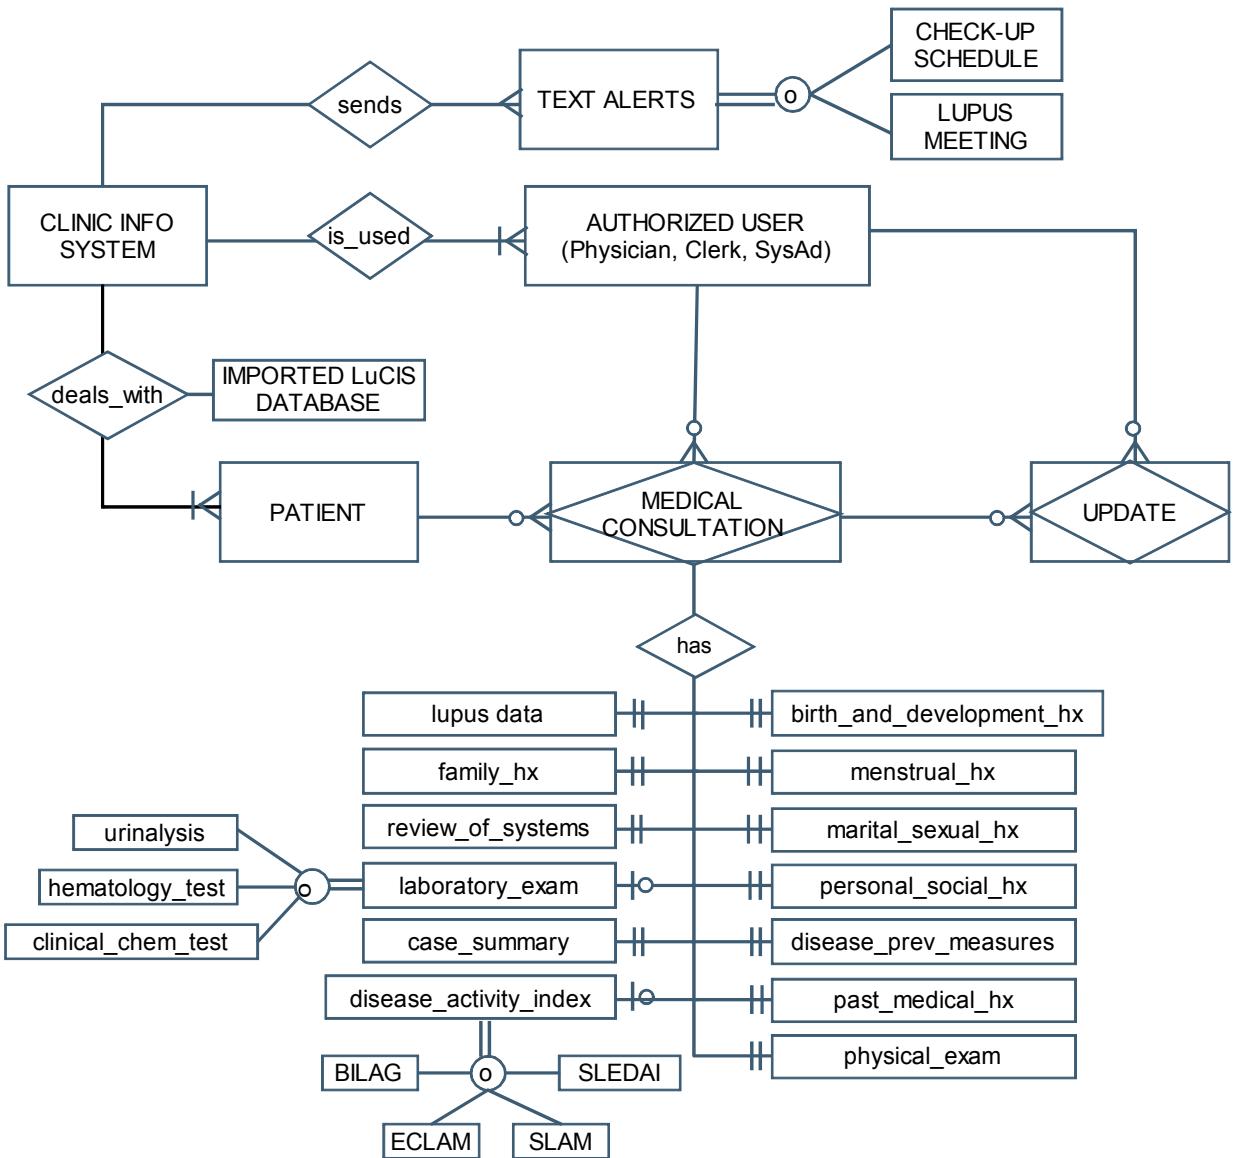

Figure 1. Entity Relationship diagram of LuCIS

B. Database table

CLINIC_INFO_SYSTEM- contains the clinic information

Data field	Data type	Description
------------	-----------	-------------

CLIN_CODE	varchar	primary key, derived attribute, clinic's code
CLIN_NAME	varchar	clinic's name
CLIN_ADDRESS	varchar	clinic's address
CLIN_TELEFAX	varchar	clinic's telefax no.
CLIN_EMAIL	varchar	clinic's email address
CLIN_AUTOFIN	int	No. of days allowed for a medical record to remain draft

PATIENT – contains the demographic data of the patient

Data field	Data type	Description
PATIENTID	varchar	primary key, patient's ID
PATFNAME	varchar	patient's first name
PATMNAME	varchar	patient's middle name
PATLNAME	varchar	patient's last name
SEX	varchar	sex
BIRTHDATE	date	date of birth
MOBILENO	varchar	mobile no
TELNO	varchar	telephone no
ADDRESS	varchar	home address
CIVILSTAT	varchar	civil status
ETHNICITY	varchar	ethnicity
RELIGION	varchar	religion
OCCUPATION	varchar	occupation

USER – contains the user information of the authorized users

Data field	Data type	Description
USERNAME	varchar	Primary key, user's username
PASSWORD	varchar	user's password
EMPNO	varchar	user's employee no.
EMPNAME	varchar	user's last name
EMPCONTACTNO	varchar	user's contact no.
STATUS	char	status of user
USERPOSITION	varchar	user's position
USERTYPE	char	type of user

MEDICAL_CONSULTATION – contains the data of a medical consultation record

Data field	Data type	Description
MED_RECNO	varchar	primary key, medical consultation record no.

MED_PID	varchar	Foreign key, patient's ID
MED_EMPNAME	varchar	Foreign key, username of the attending physician
MED_TIMESTAMP	timestamp	timestamp of the medical consultation
MED_STAT	varchar	Status of the medical record (draft or final)
CHIEFCOMPLAINT	blob	Chief complaint
HXPRESENTILLNESS	blob	History of present illness

birth_and_development_hx – contains the patient's birth and development history for a particular medical consultation

Data field	Data type	Description
BIRTH_PID	varchar	Foreign key, Patient's ID
BIRTH_RECNO	varchar	Foreign key, medical consultation record no.
FEEDINGHX	varchar	Patient's feeding history
BIRTH_STAMP	timestamp	Timestamp of birth and developmental history

menstrual_hx – contains the patient's menstrual history for a particular medical consultation

Data field	Data type	Description
MENS_PID	varchar	Foreign key, Patient's ID
MENS_RECNO	varchar	Foreign key, medical consultation record no.
MENARCHEAGE	int	Menarche age
MENOPAUSEAGE	int	Menopausal age
MENS_FLOWINT	varchar	Menstruation flow interval
MENS_DURATION	varchar	Menstruation duration
MENS_AMOUNT	varchar	Menstruation amount
LMP	varchar	Last day of menstrual period
PMP	varchar	
MENS_STAMP	timestamp	Timestamp of menstrual flow history

marital_sexual_hx - contains the patient's marital and sexual history for a particular medical consultation

Data field	Data type	Description
MAR_RECNO	VARCHAR	Foreign key, medical consultation record no.
OBSTETRICAL	VARCHAR	Obstetrical history

FAMILY_PLANNING	VARCHAR	Family planning methods
-----------------	---------	-------------------------

personal_social_hx - contains the patient's personal and social history for a particular medical consultation

Data field	Data type	Description
PER_PID	varchar	Foreign key, Patient's ID
PER_RECNO	varchar	Foreign key, medical consultation record no.
DIETS	varchar	Patient's diet
HABITS	varchar	Patient's habits
HOBBIES	varchar	Patient's hobbies
PER_STAMP	timestamp	Timestamp of personal and social history

disease_prev_measures - contains the patient's disease prevention measures for a particular medical consultation

Data field	Data type	Description
DIS_PID	varchar	Foreign key, Patient's ID
DIS_RECNO	varchar	Foreign key, medical consultation record no.
DIPHTHERIA	int	Age at diphtheria immunization
PERTUSSIS	int	Age at pertussis immunization
TETANUS	int	Age at tetanus immunization
POLIO	int	Age at polio immunization
HEPATITIS	int	Age at hepatitis immunization
MEASLES	int	Age at measles immunization
MUMPS	int	Age at mumps immunization
RUBELLA	int	Age at rubella immunization
INFLUENZA	int	Age at influenza immunization
MEDVISITS	enum	Regular medical visits
BLOODTEST	enum	Regular blood tests
TESTRESULTS	varchar	Results of blood test/ x-rays
DIS_STAMP	timestamp	Timestamp of disease prevention measures

past_medical_hx - contains the patient's past medical history for a particular medical consultation

Data field	Data type	Description
PAST_PID	varchar	Foreign key, Patient's ID
PAST_RECNO	varchar	Foreign key, medical consultation record no.
ALLERGIES	varchar	Allergies that have occurred in

		the past
ILLNESSES	varchar	Past illnesses
OPERATIONS	varchar	Past operations
TRANSFUSIONS	varchar	Past transfusions
INJURIES	varchar	Past injuries
MEDICATIONS	varchar	Current medications
ADVERSEDRUG	varchar	Presence of adverse drug reactions
PAST_STAMP	timestamp	Timestamp of past medical history

physical_exam - contains the patient's physical exam for a particular medical consultation

Data field	Data type	Description
PHY_PID	varchar	Foreign key, Patient's ID
PHY_RECNO	varchar	Foreign key, medical consultation record no.
WEIGHT	decimal	Weight in kilograms
HEIGHT	decimal	Height in inches
BP	varchar	Blood pressure
TEMP	decimal	Body temperature
PULSERATE	varchar	Pulse rate
RESPRATE	varchar	Respiration rate
GENSURVEY	varchar	General survey
SKIN	varchar	Skin evaluation
HEENT	varchar	HEENT evaluation
MOBILITY	varchar	Neck mobility
LYMPH	varchar	Neck lymph nodes
THYROID	varchar	Neck thyroid gland
OTHERMASSES	varchar	Neck other masses
BREAST	varchar	Breast evaluation
THORAX	varchar	Thorax evaluation
PULSES	varchar	Pulses evaluation
ABDOMEN	varchar	Abdomen evaluation
GENURINARY	varchar	Genitourinary evaluation
MUSCULO	varchar	Musculoskeletal system evaluation
METALSTAT	varchar	Mental status evaluation
CRANIALNERVES	varchar	Cranial nerves evaluation
GAITSTATION	varchar	Gait and station evaluation
MOTOR	varchar	Motor evaluation
COORDINATION	varchar	Coordination and other involuntary movements
SENSORY	varchar	Sensory evaluation
SUPERFICIAL	varchar	Superficial reflex evaluation
DEEPTENDON	varchar	Deep tendon reflex evaluation
ABNORMAL	varchar	Abnormal reflex evaluation

PHY_STAMP	timestamp	Timestamp of physical exam
-----------	-----------	----------------------------

family_hx - contains the patient's family history for a particular medical consultation

Data field	Data type	Description
FAM_RECNO	VARCHAR	Foreign key, medical consultation record no.
ALLERGY	VARCHAR	Presence of allergies on relatives
ALLERGY_SPEC	VARCHAR	Allergy specification
ASTHMA	VARCHAR	Presence of asthma on relatives
ASTHMA_SPEC	VARCHAR	Asthma specification
GOUT_ATHRITIDES	VARCHAR	Presence of gout and other arthritides on relatives
GOUT_SPEC	VARCHAR	Gout and other arthritides specification
BLOOD_DYSCRASIA	VARCHAR	Presence of blood dyscrasia on relatives
BLOOD_SPEC	VARCHAR	Blood dyscrasia specification
CANCER	VARCHAR	Presence of cancer on relatives
CANCER_SPEC	VARCHAR	Cancer specification
DIABETES	VARCHAR	Presence of diabetes on relatives
DIABETES_SPEC	VARCHAR	Diabetes specification
HEART_DISEASE	VARCHAR	Presence of heart disease on relatives
HEART_SPEC	VARCHAR	Heart disease specification
HYPERTENSION	VARCHAR	Presence of hypertension on relatives
HYPERTENSION_SPEC	VARCHAR	Hypertension specification
STROKE	VARCHAR	Presence of stroke on relatives
STROKE_SPEC	VARCHAR	Stroke specification
MENTAL_ILLNESS	VARCHAR	Presence of mental illness on relatives
MENTAL_SPEC	VARCHAR	Mental illness specification
OTHERS	VARCHAR	Presence of other disease on relatives

review_of_systems - contains the patient's review of systems results for a particular medical consultation

Data field	Data type	Description
ROS_PID	varchar	Foreign key, Patient's ID
ROS_RECNO	varchar	Foreign key, medical consultation record no.
GENERALSURV	varchar	General condition description

EYES	varchar	Eye condition
ENT	varchar	Ears, nose, throat condition
HEART	varchar	Heart condition
RESPIRATORY	varchar	Respiratory system condition
GASTROINTESTINAL	varchar	Gastro intestinal system condition
GENITOURINARY	varchar	Genitor urinary system condition
MUSCULOSKELETAL	varchar	Musculoskeletal condition
SKINBREAST	varchar	Skin and breast condition
NEUROLOGIC	varchar	Neurologic condition
PSYCHIATRIC	varchar	Psychiatric condition
ENDOCRINE	varchar	Endocrine system condition
HEMATOLOGIC	varchar	Hematologic condition
ROS_STAMP	timestamp	Timestamp of review of systems

case_summary - contains the case summary for a particular medical consultation

Data field	Data type	Description
CS_PID	varchar	Foreign key, Patient's ID
CS_RECNO	varchar	Foreign key, medical consultation record no.
SUBJECTIVE	tinytext	Subjective data of the consultation
OBJECTIVE	tinytext	Objective data of the consultation
ASSESSMENT	tinytext	Physician's assessment of the case
PLAN	tinytext	Therapeutic plans and medications
CS_STAMP	timestamp	Timestamp of case summary

CLIN_CHEM – contains the clinical chemistry laboratory exam results

Data field	Data type	Description
CC_PID	varchar	Foreign key, Patient's ID
CLINCHEMLAB	varchar	Laboratory where the lab exam was taken
CLINCHEMDATE	date	Date when lab exam was taken
FBSNV	varchar	FBS S.I. Unit normal value
FBS	decimal	FBS S.I. Unit result
BUNNV	Varchar	BUN S.I. Unit normal value
BUN	decimal	BUN S.I. Unit result
CRTNV	varchar	CREATININE S.I. Unit normal value
CRT	decimal	CREATININE S.I. Unit result
UANV	varchar	URIC ACID S.I. Unit normal value
UA	decimal	URIC ACID S.I. Unit result

TRINV	varchar	TRIGLYCERIDES S.I. Unit normal value
TRI	decimal	TRIGLYCERIDES S.I. Unit result
HDLNV	varchar	HDL S.I. Unit normal value
HDL	decimal	HDL S.I. Unit result
LDLNV	varchar	LDL S.I. Unit normal value
LDL	decimal	LDL S.I. Unit result
VLDLNV	varchar	VLDL S.I. Unit normal value
VLDL	decimal	VLDL S.I. Unit result
ALBNV	varchar	ALBUMIN S.I. Unit normal value
ALB	decimal	ALBUMIN S.I. Unit result
GLBNV	varchar	GLOBULIN S.I. Unit normal value
GLB	decimal	GLOBULIN S.I. Unit result
AGRNV	varchar	A/G RATIO S.I. Unit normal value
AGR	decimal	A/G RATIO. Unit result
SODNV	varchar	SODIUM S.I. Unit normal value
SOD	decimal	SODIUM S.I. Unit result
POTNV	varchar	POTASSIUM S.I. Unit normal value
POT	decimal	POTASSIUM S.I. Unit result
ALTNV	varchar	ALT/SGPT S.I. Unit normal value
ALT	decimal	ALT/SGPT S.I. Unit result
ALKNV	varchar	ALK PHOSPHATE S.I. Unit normal value
ALK	decimal	ALK PHOSPHATE S.I. Unit result
UPNV	varchar	24HR URINE PROTEIN S.I. Unit normal value
UP	decimal	24HR URINE PROTEIN S.I. Unit result
UCNV	varchar	24HR URINE CREATININE S.I. Unit normal value
UC	decimal	24HR URINE CREATININE S.I. Unit result
CCNV	varchar	CREATININE CLEARANCE S.I. Unit normal value
CC	decimal	CREATININE CLEARANCE S.I. Unit result
CC STAMP	varchar	Timestamp of clinical chem

HEMATOLOGY – contains the results of the Hematology laboratory test

Data field	Data type	Description
H PID	varchar	Foreign key, Patient's ID
HEMALAB	varchar	Laboratory where the lab exam was taken
HEMADATE	date	Date when lab exam was taken

HG	decimal	Hemoglobin result
HGNV	varchar	Hemoglobin result
HEMA	decimal	Hematocrit result
HEMANV	varchar	Hematocrit result
RBC	decimal	RBC count result
RBCNV	varchar	RBC count result
WBC	decimal	WBC count result
WBCNV	varchar	WBC count result
PLT	decimal	Platelets result
PLTNV	varchar	Platelets result
SEG	decimal	Segmenters result
SEGNV	varchar	Segmenters result
LYM	decimal	Lymphocyte result
LYMNV	varchar	Lymphocyte result
H_STAMP	timestamp	Timestamp of hematology

URINALYSIS – contains the results of routine urinalysis

Data field	Data type	Description
U_PID	varchar	Foreign key, Patient's ID
URINELAB	varchar	Laboratory where the lab exam was taken
URINEDATE	DATE	Date when lab exam was taken
URINECOLOR	varchar	urine color
TRANSPARENCY	varchar	urine transparency
SP_GRAVITY	decimal	urine specific gravity
PH	decimal	pH level of the urine
SUGAR	varchar	Sugar result
ALBUMIN	varchar	Albumin result
UR_RBC	varchar	RBC result
UR_WBC	varchar	WBC result
CAST	varchar	cast result
HYALINE	varchar	Hyaline microscopic findings
GRANULAR	varchar	Granular microscopic findings
WAXY	varchar	Waxy microscopic findings
PUS	varchar	Pus- cells microscopic findings
RBC	varchar	RBC microscopic findings
RBC_CELLS	varchar	RBC result
PUS_CELLS	varchar	Pus- cells result
YEAST_CELLS	varchar	Yeast cells result
SQUAM_CELLS	varchar	Squamous cells result
RENAL_CELLS	varchar	Renal cells result
BACTERIA	varchar	Bacteria result
MUCUS	varchar	Mucus threads result
AMORPHOUS_URATE	varchar	Amorphous urates result
URIC_ACID	varchar	Uric acid result

CALCIUM_OXALATE	varchar	Calcium oxalate result
AMORPHOUS_PO4	varchar	Amorphous PO4 result
TRIPLE_PO4	varchar	Triple PO4 result
U_STAMP	timestamp	Timestamp of urinalysis

BILAG - contains the BILAG results

Data field	Data type	Description
BILAG_PID	varchar	Foreign key, Patient's ID
BILAG_SCORE	varchar	BILAG total score
BILAG_GENERAL	varchar	general non-specific manifestations
BILAG_MUCO	varchar	mucocutaneous events
BILAG_NEURO	varchar	Neurological events
BILAG_MUSCULO	varchar	Musculoskeletal events
BILAG_CARDIO	varchar	Cardiovascular events
BILAG_VASCU	varchar	Vasculitis events
BILAG_RENAL	varchar	Renal events
BILAG_HEMA	varchar	Hematology events
BILAG_NOTES	varchar	BILAG notes

ECLAM - contains the ECLAM results

Data field	Data type	Description
ECLAM_PID	varchar	Foreign key, Patient's ID
ECLAM_SCORE	int	ECLAM total score
ECLAM_NOTES	varchar	ECLAM notes
ECLAM_STAMP	timestamp	Timestamp of ECLAM

SLAM - contains the SLAM results

Data field	Data type	Description
SLAM_PID	varchar	Foreign key, Patient's ID
SLAM_SCORE	int	SLAM total score
SLAM_NOTES	varchar	SLAM notes
SLAM_STAMP	timestamp	Timestamp of SLAM

SLEDAI – contains the SLEDAI results

Data field	Data type	Description
SLEDAI_PID	varchar	Foreign key, Patient's ID
SLEDAI_SCORE	int	SLEDAI total score
SLEDAI_NOTES	varchar	SLEDAI notes
SLEDAI_STAMP	timestamp	Timestamp of ECLAM

AUDITTRAIL– contains an audit trail of transactions done within the system

Data field	Data type	Description
AUDITUSERID	varchar	Username of the person making the changes
AUDITRECNO	varchar	Record no. of the medical record being updated
AUDITDETAILS	timestamp	Details of the transaction
AUDITSTAMP	varchar	Timestamp of the transaction

IMPORTCLINIC– contains the details of the imported LuCIS databases

Data field	Data type	Description
IMP_NAME	varchar	Name of clinic
IMP_CODE	varchar	Clinic code
IMP_ADD	varchar	Clinic address
IMP_CONTACT	varchar	Clinic's Contact details
IMP_STAMP	varchar	Timestamp of database import

IMPORTLUPUSDATA– contains the details of the imported LuCIS databases

Data field	Data type	Description
IMP_PID	varchar	Primary key, Patient's ID
IMP_SEX	varchar	Patient sex
DIAGNOSISAGE	int	Age at lupus diagnosis
DATEOFBIRTH	varchar	Date of birth
IMP_ACR	varchar	ACR criteria at lupus diagnosis
IMP_HGB	decimal	Hemoglobin
IMP_WBC	decimal	WBC results
IMP_PLT	decimal	Platelet count
IMP_ESR	decimal	ESR result
IMP_ALB	decimal	Albumin result
IMP_UWBC	decimal	Urine WBC
IMP_RBC	decimal	RBC result
IMP_CASTS	decimal	Urine casts
IMP_CRT	decimal	Urine creatinine
IMP_C3	decimal	Urine C3
IMP_MAN	decimal	Presenting manifestations

LUPUSDATA– contains the details of the imported LuCIS databases

Data field	Data type	Description
LUPUS_PID	varchar	Primary key, Patient's ID
LUPUSAGE	int	Age at lupus diagnosis
LUPUSDATE	varchar	Date of lupus diagnosis
ACR	varchar	ACR criteria at diagnosis
HGB	decimal	Hemoglobin

WBC	decimal	WBC results
PLT	decimal	Platelet count
ESR	decimal	ESR result
ALB	decimal	Albumin result
UWBC	decimal	Urine WBC
RBC	decimal	RBC result
CASTS	decimal	Urine casts
CRT	decimal	Urine creatinine
C3	decimal	Urine C3
LUPUSMAN	decimal	Presenting manifestations at lupus diagnosis
LUPUS STAMP	timestamp	Timestamp of lupus data

LUPUSMTG— contains the date of lupus meetings

Data field	Data type	Description
MEETING	varchar	Primary key, Date and time of lupus meeting
VENUE	varchar	Meeting venue

SENTALERTS— contains the details of sent text alerts

Data field	Data type	Description
SENTSTAMP	timestamp	Timestamp when text alert was sent
PATID	varchar	Recipient's Patient ID
RECIPIENT	varchar	Recipient's mobile number
MESSAGE	varchar	Text message

SKED— contains the details of check-up schedules

Data field	Data type	Description
SKED PID	varchar	Patient's ID
SKED RECNO	varchar	Patient's medical record no.
SKED PHY	varchar	Patient's attending physician
SCHEDULE	varchar	Schedule of check-up
SKED NOTES	tinytext	Check-up notes

C. Context Flow Diagram

The context flow diagram of LuCIS is illustrated in Figure 2. It shows the users of the system, the input of each user and the corresponding output delivered by the system. The physician and clerk may add a new medical consultation and save it as draft.

However, it is only the physician who can finalize a medical consultation draft. The system administrator is responsible for managing LuCIS settings and user accounts.

An SMS reminder is sent to the patient to alert him of his check-up schedule and lupus meeting date.

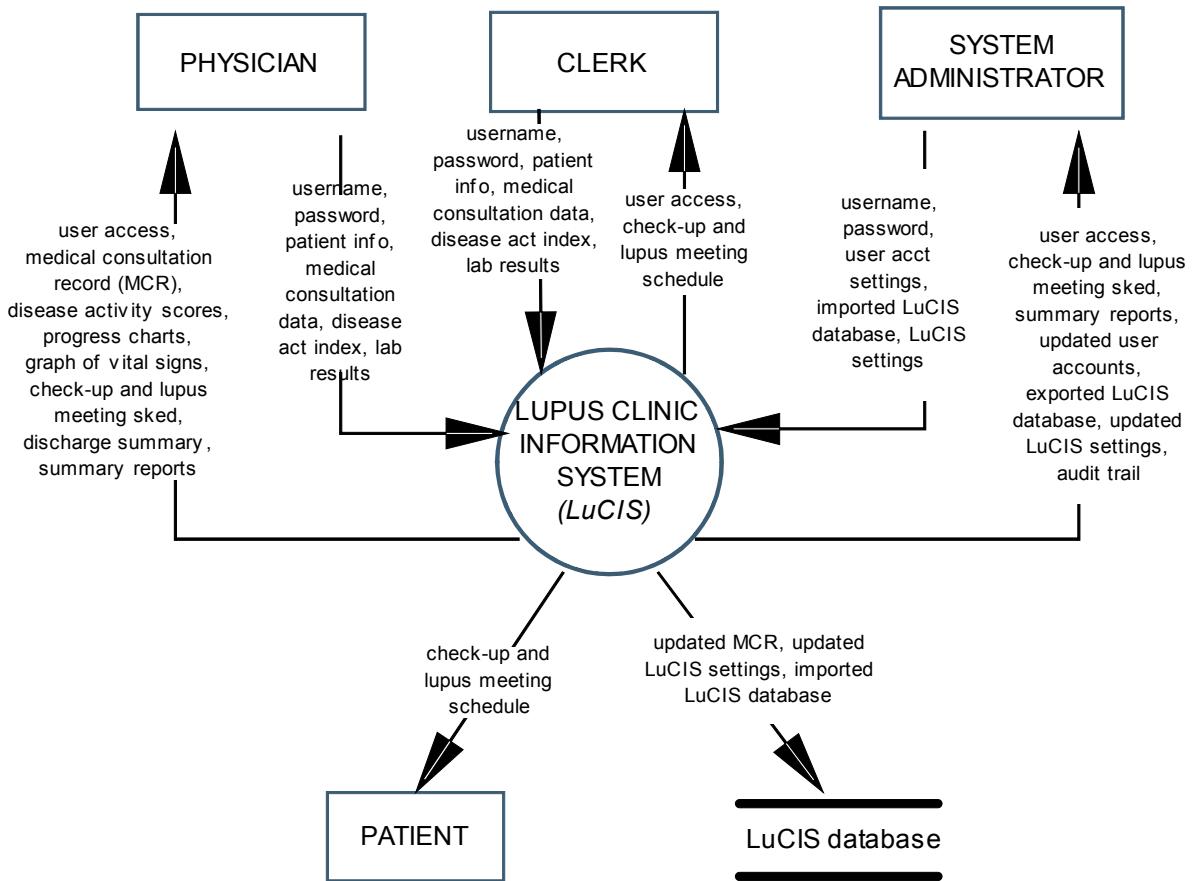

Figure 2. Context Flow diagram of LuCIS

D. Data Flow Diagram

The main processes of the system are shown in Figure 3. The succeeding figures illustrate the sub-explosions of the main processes of the Lupus Clinic Information System.

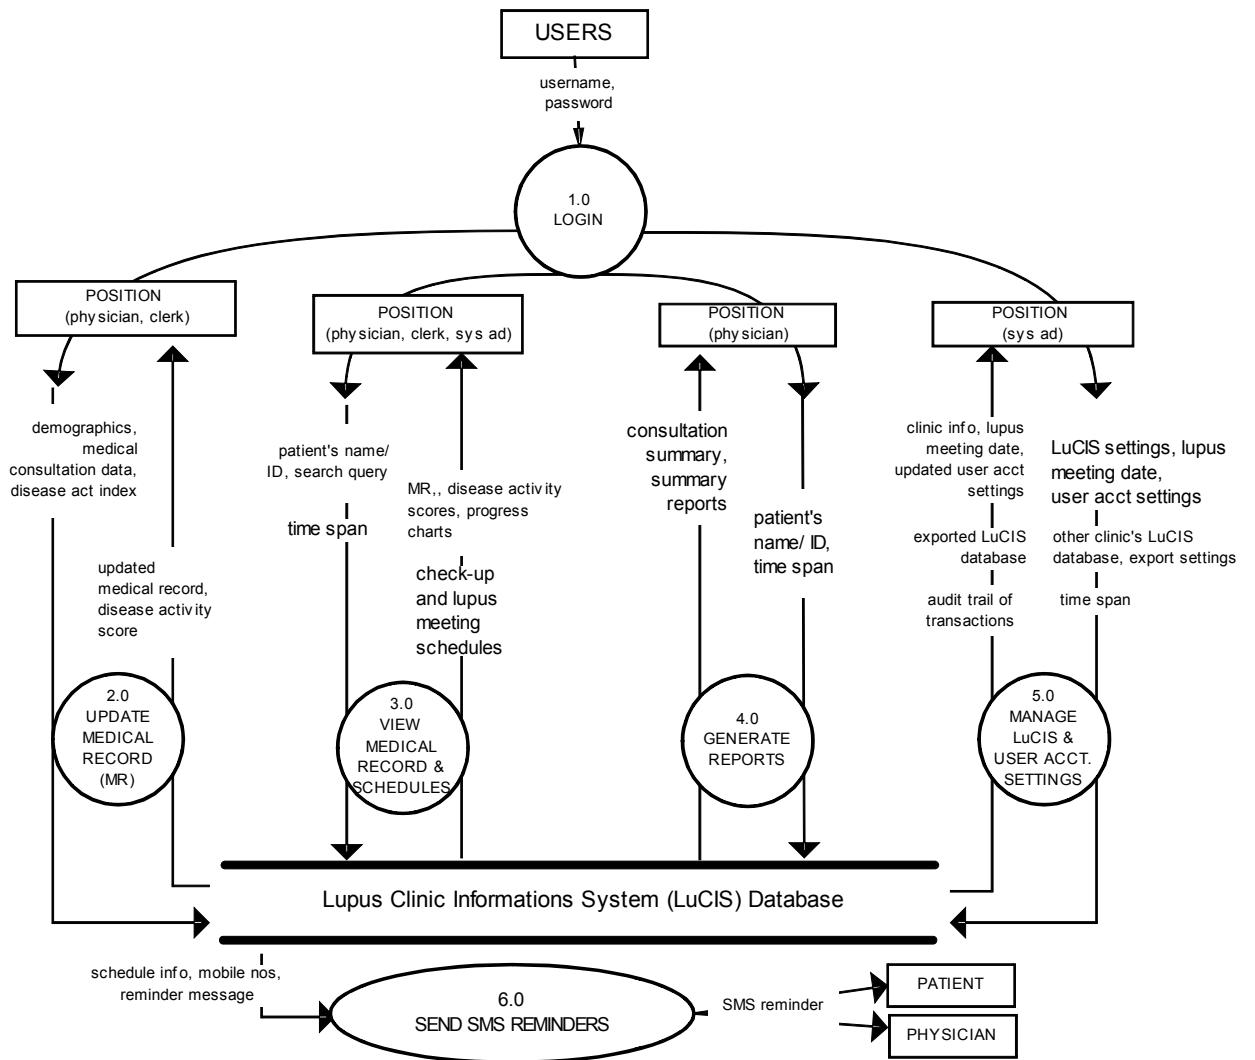

Figure 3. Data Flow diagram of LuCIS

When the users login to the system, the system will immediately identify the position of the user and will limit his functionalities based on his position.

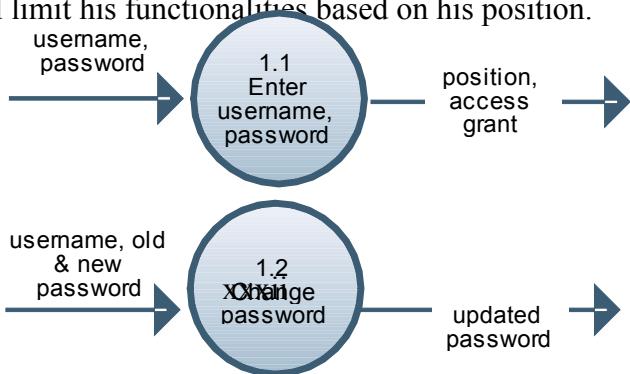

Figure 4. Sub-explosion of Process 1.0 (LOGIN), LuCIS

A medical consultation record can be finalized by the physician only if all the mandatory entities have been filled out. Medical records that cannot be completed at the moment can be saved as draft and be finalized later by the attending physician. Draft medical records will be finalized automatically depending on the number of days set by the system administrator. Figures 5, 6 and 7 show the sub-explosions of updating a medical record.

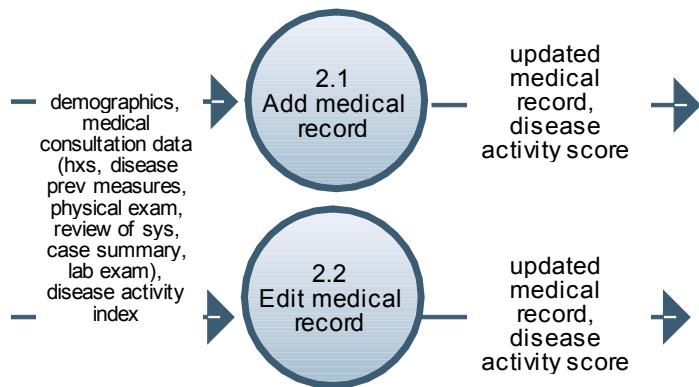

Figure 5. Sub-explosion of Process 2.0 (UPDATE MEDICAL RECORD), LuCIS

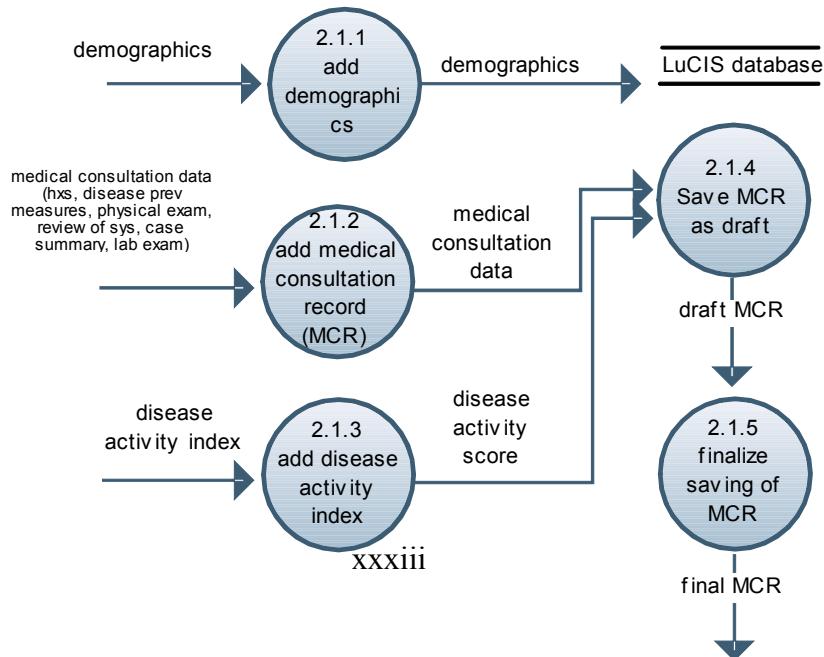

Figure 6. Sub-explosion of Process 2.1 (ADD MEDICAL RECORD), LuCIS

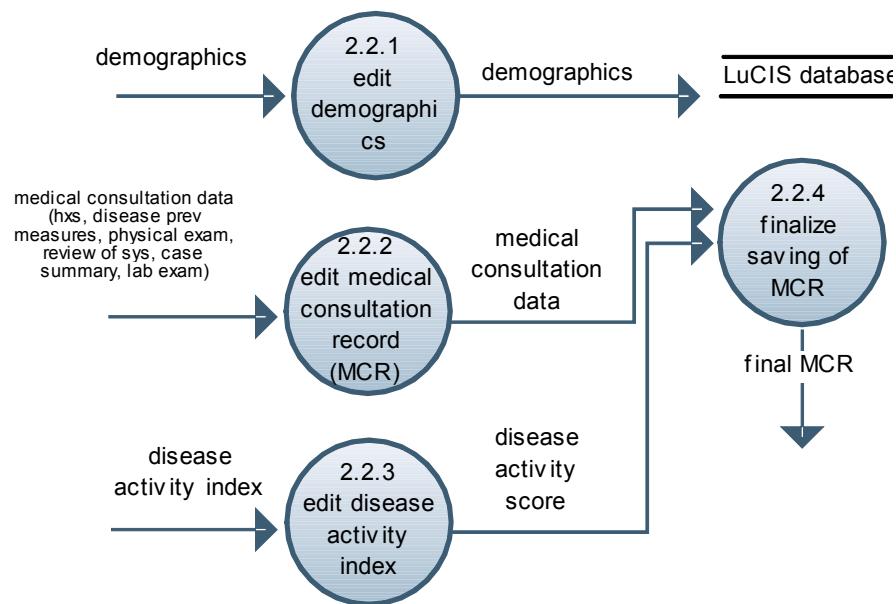

Figure 7. Sub-explosion of Process 2.2 (EDIT MEDICAL RECORD), LuCIS

Figures 8, 9 and 10 show the sub-explosions of Process 3.0 (View medical record and schedules).

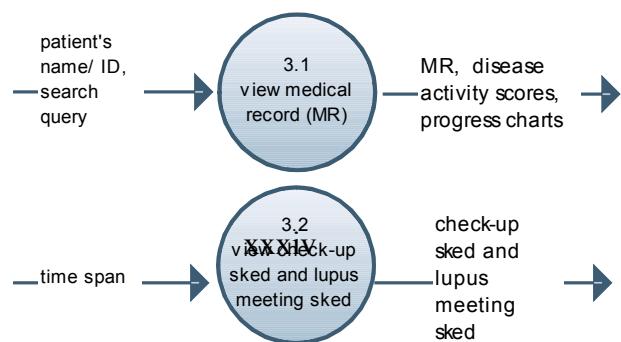

Figure 8. Sub-explosion of Process 3.0 (VIEW MEDICAL RECORD AND SCHEDULES), LuCIS

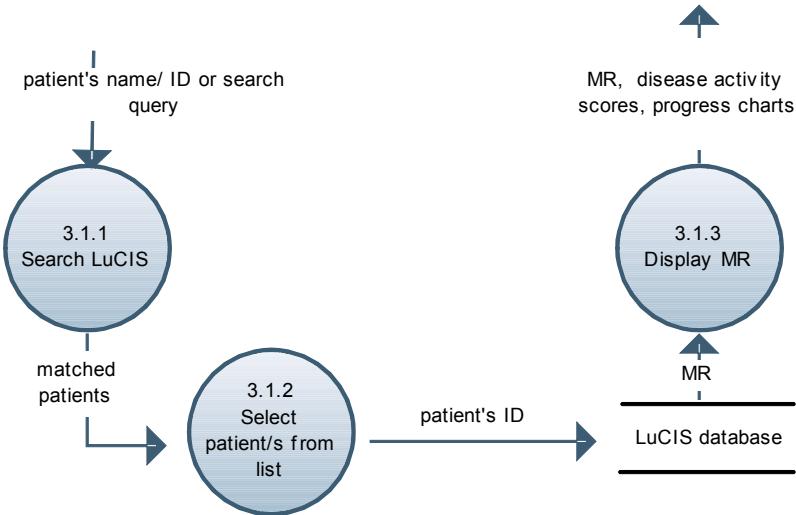

Figure 9. Sub-explosion of Process 3.1 (VIEW MEDICAL RECORD), LuCIS

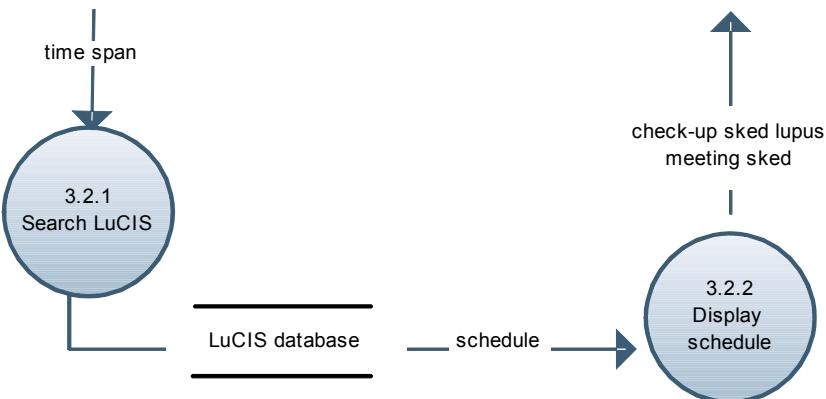

Figure 10. Sub-explosion of Process 3.2 (VIEW CHECK-UP SKED AND LUPUS MEETING SKED), LuCIS

LuCIS generates consultation summaries and displays it in PDF format. Furthermore, LuCIS generates summary reports based on the local and/ or imported databases. Figures 11, 12 and 13 show sub-explosions for these processes.

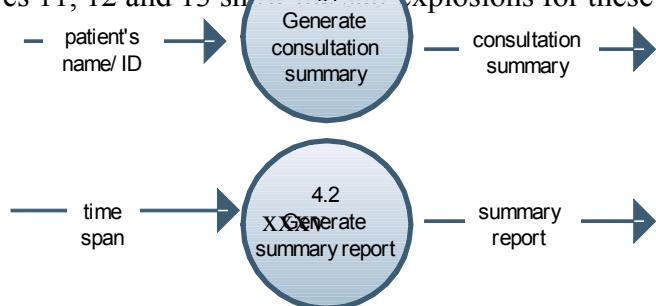

Figure 11. Sub-explosion of Process 4.0 (GENERATE REPORTS), LuCIS

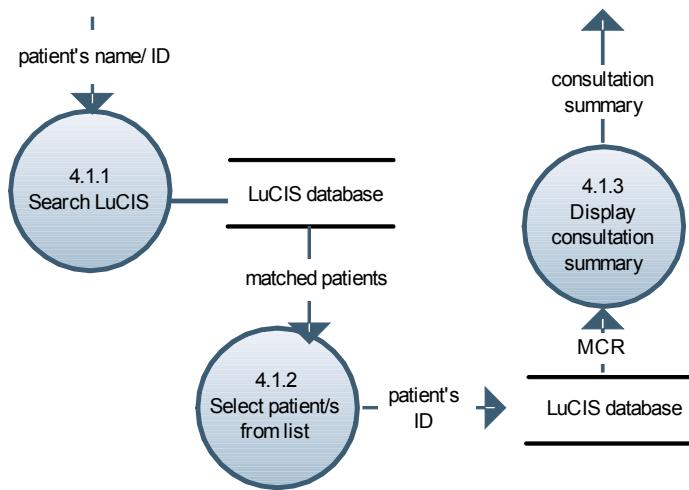

Figure 12. Sub-explosion of Process 4.1 (GENERATE CONSULTATION SUMMARY), LuCIS

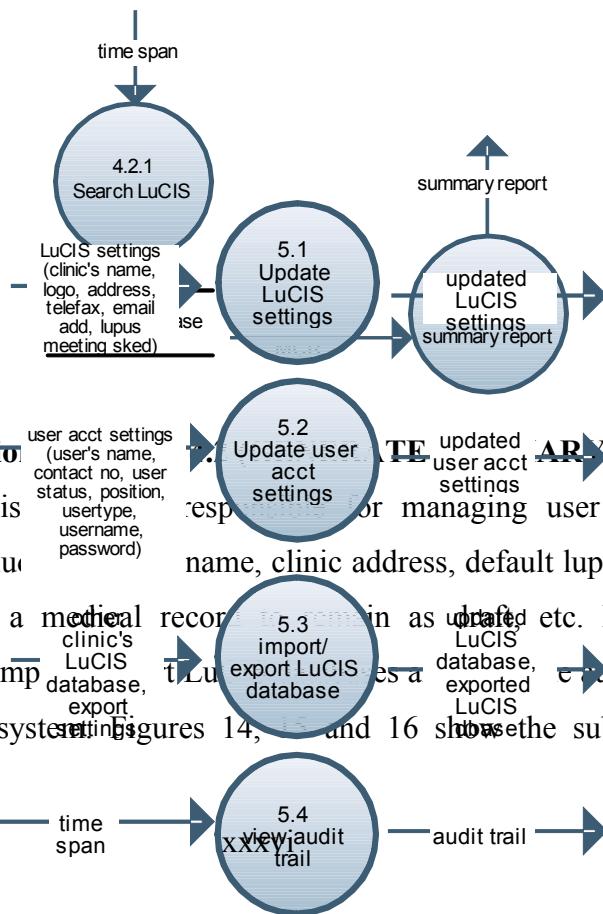

Figure 13. Sub-explosion of Process 4.2 (MANAGE SYSTEM ADMINISTRATION), LuCIS

System administrator manages system administration settings which include LuCIS settings (clinic's name, logo, address, telefax, email add, lupus meeting sked) and user account settings (user's name, contact no, user status, position, usertype, username, password). The administrator can import/export LuCIS database, export LuCIS database, and view audit trail of transactions made within the system. Figures 14, 15, and 16 show the sub-explosions for these processes.

Figure 14. Sub-explosion of Process 5.0 (MANAGE LuCIS AND USER ACCOUNT SETTINGS), LuCIS

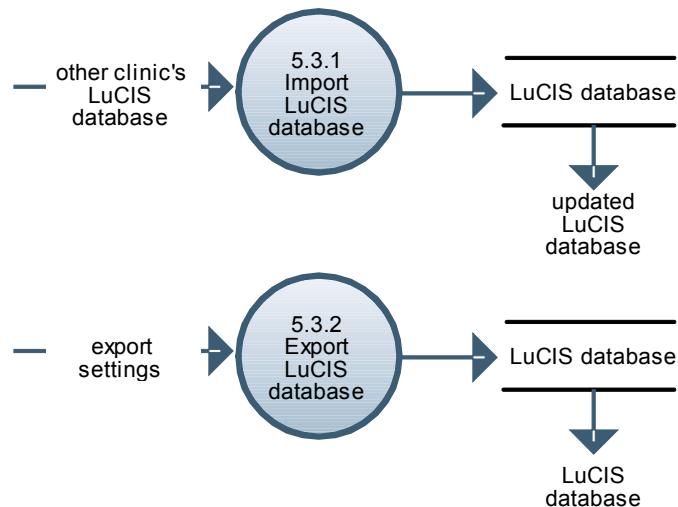

Figure 15. Sub-explosion of Process 5.3 (IMPORT/ EXPORT LuCIS DATABASE), LuCIS

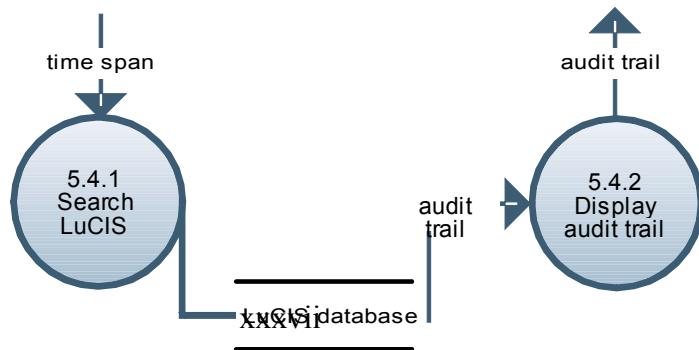

Figure 16. Sub-explosion of Process 5.4 (VIEW AUDIT TRAIL), LuCIS

Sending check-up and lupus meeting reminders to patients via SMS requires the system to fetch the schedule information and mobile numbers of the patients from the database. Figure 17 illustrates the sub-explosion for sending of SMS reminders.

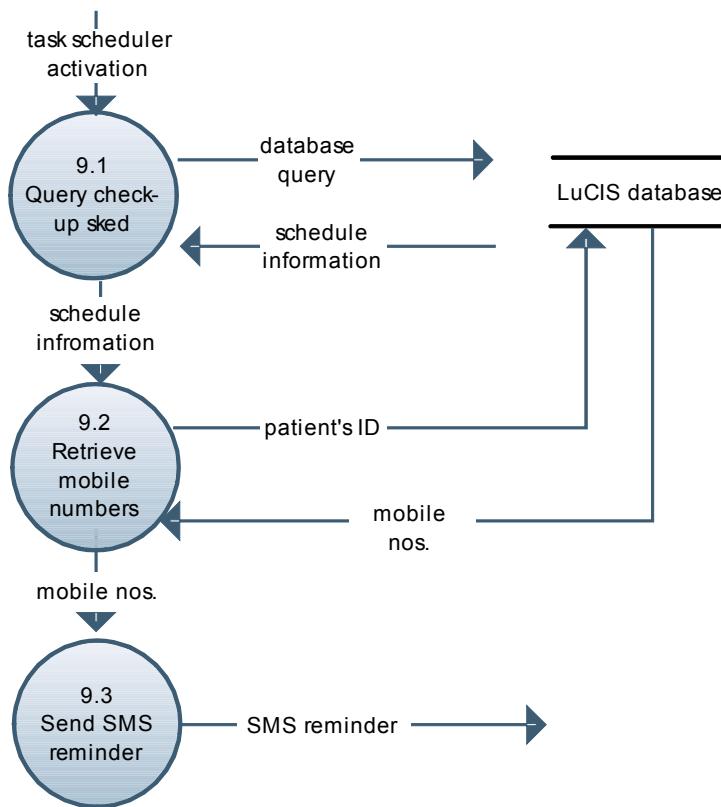

Figure 17. Sub-explosion of Process 6.0 (SEND SMS REMINDERS), LuCIS

E. Technical Architecture

Figure 18 illustrates the technical architecture of LuCIS. The system will run on client/server computer architecture. A connection between the server and mobile phone is needed in sending SMS reminders. Hence, a serial/ USB cable/ infrared/ bluetooth will be used for the connection between the mobile phone and server.

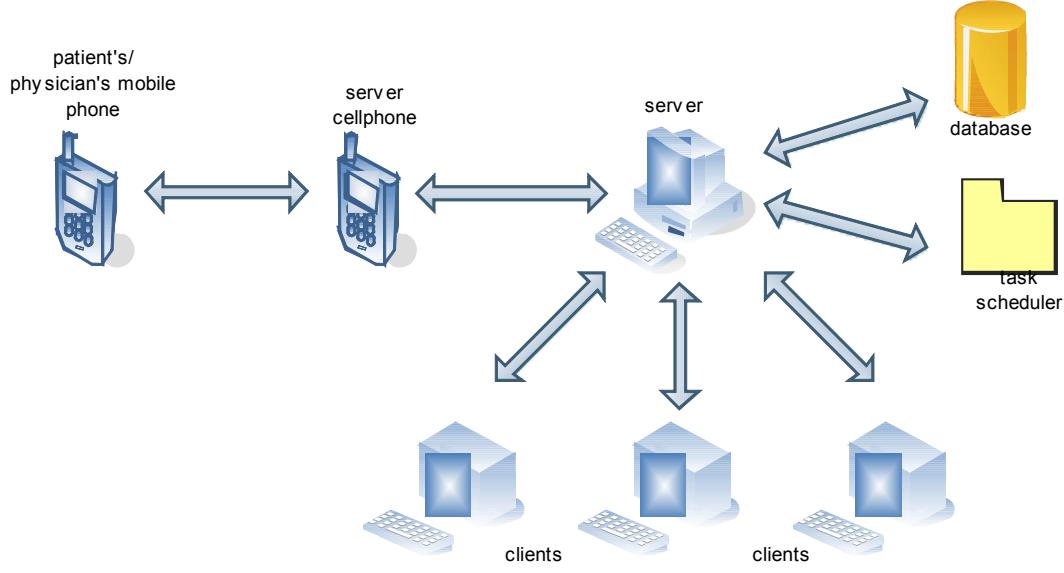

Figure 18. Technical architecture of LuCIS

The server machine should have a speed of at least 500 megahertz and a memory of at least 128MB. The server shall have the following applications:

- Apache server (version 1.3.33 and up)
- MySQL (at least 4.1.9)
- PHP (version 4.3.10 and up)
- Gammu
- Task scheduler

The clients' machine should have a speed of at least 200 megahertz and memory of at least 128 MB.

V. RESULTS

The main interface of the LuCIS is shown in Figure 19. Users are identified according to their username, which serves as the primary key in the database table. Upon successful login, the next interface will be based on the position of the user, whether he is a physician, clerk or system administrator. Figure 20 shows the physician's interface along with the functionalities.

resembling a "butterfly"

"Lupus is a chronic autoimmune inflammatory multi-system disease of unknown cause. Most commonly it occurs in women during the childbearing years, ages 15-45. Women are affected ten times more often than men in this age group. However, younger and older individuals can develop lupus, but when children or those over 45 have lupus women are affected only two times as often as men. The disease is commoner in Orientals and Blacks."

Chief Complaint

Abdominal pain, malaise, fatigue, bilateral lower-extremity swelling, and low-grade fever.

History of Present Illness

The patients chest x-ray showed bilateral nodular infiltrates with no effusion. A week later, the patient went to a local hospital with abdominal pain and a low-grade fever. An abdominal computed tomography (CT) scan showed a 2.4-cm lower left lobe lung lesion, which was presumed cavitary, and left pleural effusion.

VI. DISCUSSION

Lupus Clinic Information System (LuCIS) is an electronic medical record that allows the physician to store patient information and medical records in a database that can be accessed within the clinic. Aside from serving as storage of medical records, LuCIS also includes disease activity calculators that compute for the lupus scores based on the commonly used disease activity indices like SLAM, SLEDAI, ECLAM and BILAG. These scores are used to monitor and determine whether or not the patient is positively reacting to the medications/therapies given to him. Disease activity scores are displayed graphically to facilitate better comparison of scores. In addition to that, the export/ import facility of LuCIS allows the

clinic to incorporate lupus data from other clinics to its own LuCIS database. This allows the physician/ researcher to increase the number of subjects involved in his study. Searching based on different lupus data can also be done in LuCIS.

The reminder system of LuCIS utilizes Short Message Service to alert the patients and physicians of their check-up schedules and lupus meeting date. The default date for lupus meetings is every first Saturday of each month, but the system administrator may change it to another date by modifying the LuCIS settings. Text alerts for check-ups are sent twice: first alert is sent two days before the check-up and second alert is sent a day before the check-up. On the other hand, reminders for lupus meeting are sent a day before the lupus meeting. These text alerts increase the degree of recall among patients and physicians, and help improve the ability of the clinic to provide efficient service. Though the SMS facility of LuCIS is expected to reduce the “did-not-attend” incidences in the clinic, it does not necessarily assure that the patient will show up on the day of his check-up. Moreover, the SMS feature is one way only; patients cannot query the system and if they have clarifications or questions, they have to call the clinic.

The issue of confidentiality in LuCIS is upheld since the system can be accessed only within the clinic. This makes the system protected from illegal entry of non-authorized users and corruption of data. Moreover, authorized users have different user privileges so confidentiality of the patient information is still ensured even within the clinic.

VII. CONCLUSION

Lupus Clinic Information System (LuCIS) helps in the realization of the preventive care program and makes the work of the person administering the files less tedious since it does away with the manual system of recording, updating and retrieving of medical records. Also, its SMS facility answers the problem of reducing the “did-not-attend” incidences during check-ups and lupus meetings. In addition to that, the disease activity calculators of LuCIS compute for the disease activity score based on SLEDAI, SLAM, ECLAM and BILAG disease activity indices. These scores are useful in evaluating the status of lupus in the patient. Lastly, the import/export facility of LuCIS allows the integration of lupus data from other clinics’ LuCIS database to the clinic’s own LuCIS database. Lupus data from other

databases like BLIPS may also be imported into LuCIS provided that the user knows how to export such database in a format that LuCIS recognizes.

There are three types of users for LuCIS- the physician, clerk and system administrator.

With LuCIS, the physician can add medical consultation records and save them as draft or final, add laboratory exam results, fill-out disease activity index forms, view medical records, edit drafts and finalize them, generate summaries, view his appointments with his patients, and change his password.

Clerks, on the other hand, are allowed to add medical consultation records and save them as draft, add laboratory exam results, fill-out disease activity index forms, view schedules, and change his password.

The system administrator can specify the settings of LuCIS, manage user accounts, import and export LuCIS, view an audit trail of the transactions, view schedules and change his password.

VIII. RECOMMENDATION

LuCIS sends automated SMS alerts to patients and physicians but it does not have the capability to entertain queries from them. Therefore, it is recommended that patients and physicians be allowed to query the system via SMS. Also, confirmation and cancellation of schedules via SMS may also be added.

SYSTEMIC LUPUS ERYTHEMATOSUS DISEASE ACTIVITY INDEX

Weight	SLEDAI Score	Descriptor	ITEMS PRESENT DURING THE PRECEDING 10 DAYS TO THE VISIT ARE:
			Definition
9	_____	Seizures	<u>Recent onset</u> , exclude metabolic, infectious, or other drug causes.
9	_____	Psychosis	Altered ability to function in normal activity due to severe disturbance in the associations, impoverished thought content, marked illogical thinking, bizarre, disorganized, or catatonic behavior. Exclude uremia, and drug causes.
9	_____	Organic Brain Syndrome	Altered mental function with impaired orientation, memory, or other intellectual function, with rapid onset and fluctuation clinical features. Include clouding of consciousness with reduced capacity to focus, and inability to sustain attention to environment, plus at least 2 of the following: perceptual disturbance, incoherent speech, insomnia or daytime drowsiness, or increased or decreased psychomotor activity. Exclude metabolic, infectious, or drug causes.
9	_____	Visual disturbances	Retinal changes of SLE. Include Cytoid bodies, retinal hemorrhages, serous exudates or hemorrhages in the choroid, or optic neuritis. Exclude hypertension, infection, or drug causes.
9	_____	Cranial nerve disorder	<u>New onset</u> of sensory or motor neuropathy involving cranial nerves.
9	_____	Lupus headaches	Severe, persistent headaches; may be migrainous, but must be non-responsive to narcotics.
9	_____	CVA	<u>New onset</u> of cerebrovascular accident(s). Exclude arteriosclerosis.
9	_____	Vasculitis	Ulceration, gangrene, tender finger nodules, periungual infarction, splinter hemorrhages, or biopsy or angiogram proof of vasculitis.
4	_____	Arthritis	>2 joints with pain and signs of inflammation (i.e. tenderness, swelling, or effusion).
4	_____	Myositis	Proximal muscle aching/ weakness, associated with elevated creatine, phospho kinase/ aldolase or electromyogram changes or a biopsy showing myositis.
4	_____	Urinary casts	Heme-granular casts or red cell casts.
4	_____	Hematuria	> 5 red blood cells/ high power field. Exclude stone, infection, or other cause.
4	_____	Proteinuria	> 0.5 gram/24 hours (children: > 30mg/kg/24 hours). <u>New onset</u> or recent increase by > 0.5 gram/24 hours.
4	_____	Pyuria	> 5 white blood cells/ high power field. Exclude infection.
2	_____	New rash	<u>New onset</u> or recurrence of inflammatory type rash.
2	_____	Alopecia	<u>New onset</u> or recurrence of abnormal, patchy, or diffuse loss of hair.
2	_____	Mucosal ulcers	<u>New onset</u> or recurrence of oral or nasal ulcerations.
2	_____	Pleurisy	Rheumatic chest pain with pleural rub or effusion, or pleural thickening.
2	_____	Pericarditis	Pericardial pain with at least 1 of the following: rub, effusion, EKG or ECHO.
2	_____	Low complement	Decrease in CH50, C3, C4, below the lower limit of normal for testing laboratory.
2	_____	Increased DNA binding	> 25% binding by Farr assay or above normal range for testing laboratory.
1	_____	Fever	> 38°C. Exclude infectious cause.
1	_____	Thrombocytopenia	< 100,000 platelets/ mm ³ .
1	_____	Leukopenia	< 3000 white blood cells/ mm ³

Appendix 6: SLAM (Systemic Lupus Activity Measure) form

SYSTEMIC LUPUS ACTIVITY MEASURE

ITEMS PRESENT DURING THE PRECEDING 1 MONTH TO THE VISIT ARE:

	Absent or	Mild	Moderate	Severe	Not
Cardiovascular					
15. Raynaud's	0	1 Present			
16. Hypertension	0	1 Diast. 90-105	2 Diast. 105-115	3 Diast. >115	
17. Carditis	0	1 Pericarditis by EKG &/or RUB &/or effusions by echo; no sx	2 Chest pain or arrhythmia	3 Myocarditis with hemo-dynamic compromise &/or arrhythmia	
Gastrointestinal					
18. Abdominal pain (serositis, pancreatitis, ischemic bowel, etc.)	0	1 Complaint	2 Limiting pain	3 Peritoneal signs/ascites	
Neuromotor					
19. Stroke syndrome (includes mononeuritis multiplex, transient ischemic attack (TIA), reversible ischemic neurologic deficit (RIND), cerebrovascular accident (CVA), retinal vascular thrombosis)	0	1 Single TIA	2 Multiple TIA/RIND or mono-neuritis multiplex or cranial neuro-pathy or chores	3 CVA/myelitis, retinal vascular occlusion	
20. Seizure	0	1 1-2/ month	2 > 2/month	3 Status epilepticus	
21. Cortical dysfunction	0	1 Mild depression /personality disorder or cog-nitive deficit	2 Δ in sensorium or severe depression or limiting cognitive impairment	3 Psychosis or dementia or coma	
22. Headache (including migraine equivalents)	0	1 Complaint	2 Limits some	3 Incapacitating	
Joints					
24. Joint pain from synovitis and/or tenosynovitis	0	1 Arthralgia only	2 Objective inflammation	3 Limited function	
Laboratory					
25. Hematocrit	0 > 35	1 30-35	2 25-29.9	3 < 25	
26. WBC	0 > 3500	1 3500-2000	2 2000-1000	3 < 1000	
27. Lymphocyte count	0 1500-4000	1 1499-1000	2 999-500	3 < 499	
28. Platelet count	0 > 150T	1 100-150T	2 99-50T	3 < 50T	
29. ESR (Westergren)	0 < 25	1 25-50	2 51-75	3 > 75	
30. Serum creatinine or creatinine clearance	0 0.5-1.3 mg/dl or 80-100% CrCl	1 1-4 mg/dl or 79-60% CrCl	2 2.1-4 mg/dl or 30-60% CrCl	3 > 4 mg/dl or < 30% CrCl	
31. Urine sediment	0 IXV ₂₊ proteinuria &/or < 500 mg/L 24 ^h urine protein	1 to 1-3 granular &/or cellular casts/hpf &/or 0- 1+ proteinuria &/or < 500 mg/L 24 ^h urine protein	2 WBC/hpf &/or 0- 1+ granular &/or cellular casts/hpf &/or 3+ proteinuria &/or > 500 mg/L 24 ^h urine protein	3 WBC/hpf &/or red cell cast &/or > 4+ proteinuria &/or > 3.5 g/L 24 ^h urine protein	

Appendix 7: ECLAM (European Consensus Lupus Activity Measurement) form

EUROPEAN CONSENSUS LUPUS ACTIVITY MEASUREMENT (ECLAM)

	MANIFESTATION	DEFINITION OF RESPONSE	
1.	<u>Generalized</u> Fever Fatigue	Any of the following: Documented basal morning temperature of 37.5° not due to an infective process A subjective feeling of extraordinary tiredness	0.5
2.	<u>Articular</u> Arthritis Evolving Arthralgia	Any of the following: Nonerosive arthritis involving at least 2 peripheral joints (wrist, metacarpophalangeal or proximal, interphalangeal joints) New onset or worsening of specific localized pain without objective symptoms in at least two peripheral joints	1
3a.	<u>Active Mucocutaneous</u> Malar rash Generalized rash Discoid rash Skin vasculitis Oral ulcers	Any of the following: Fixed erythema, flat or raised over the malar eminences, tending to spare the nasolabial folds A maculopapular rash not induced by drugs, that may be located anywhere on the body, and that is not strictly dependent on sun exposure Erythematous, raised patches with adherent keratotic scaling and follicular plugging Including digital ulcers, purpura, urticaria, bullous lesions Oral or nasopharyngeal ulcers, usually painless, observed by a physician	0.5
3b.	<u>Evolving mucocutaneous</u>	If any of the above mucocutaneous manifestations are new or have worsened since the last observation, add 1 point	1
4.	<u>Myositis</u>	Confirmed by raised muscle enzymes and/or EMG examination and/or histology	2
5.	<u>Pericarditis</u>	Documented by ECG or rub or evidence of pericardial effusion on ultrasound	1
6.	<u>Intestinal</u> Intestinal vasculitis Sterile peritonitis	Any of the following: Evidence of acute intestinal vasculitis Evidence of abdominal effusion in the absence of infective processes	2
7.	<u>Pulmonary</u> Pleurisy Pneumonitis Ingravescent dyspnea	Any of the following: Clinical or radiological evidence of pleural effusion in the absence of infective processes Single or multiple lung opacities on chest x-ray thought to reflect active disease not due to an infective process Due to an evolving interstitial involvement	1
8.	<u>Evolving</u> <u>Neuropsychiatric</u> Headache/migraine Seizures Stroke Organic brain disease Psychosis	New appearance or worsening of any of the following: Recently developed, persistent, or recurrent. Poorly responsive to the most commonly used drugs, but partially or totally responsive to corticosteroids Grand mal or petit mal seizures, Jacksonian fits, temporal lobe seizures, or choreic syndrome, in the absence of offending drugs or known metabolic derangements, e.g., uremia, ketoacidosis, or electrolyte imbalance Cerebral infarction or hemorrhage, instrumentally confirmed Impairment of memory, orientation, perception, and ability to calculate Dissociative features in the absence of offending drugs or known metabolic derangements, e.g., uremia, ketoacidosis, or electrolyte imbalance	2

	MANIFESTATION	DEFINITION OF RESPONSE	
9a.	<u>Renal</u> + Proteinuria Urinary casts Hematuria Raised serum creatinine or reduced creatinine clearance	Any of the following: At least 500 mg/day Red cells, hemoglobin, granular, tubular, or mixed casts Microscopic or macroscopic	0.5
9b.	<u>Evolving Renal</u>	If any of the above renal manifestations are new or have worsened since the last observation, add 2 points	2
10.	<u>Hematologic</u> Nonhemolytic anemia <u>Hemolytic anemia</u> Leukopenia (or lymphopenia) Thrombocytopenia	Any of the following: A Coombs-negative normocytic hypochromic or normochromic anemia without reticulocytosis A Coombs-positive hemolytic anemia, with reticulocytosis and elevated LDH, in the absence of offending drugs <3,500/mm ³ WBC (or 1,500/mm ³ lymphocytes) in the absence of offending drugs <100,000/mm ³ in the absence of offending drugs	1
11.	<u>Erythrocyte Sedimentation Rate</u> Raised ESR	>25 mm/h by Westergren or comparable methods, not due to other concomitant pathological process	1
12.	<u>Hypocomplementemia</u> C3 CH50	Reduced plasma level of any of the following: By radial immunodiffusion or laser nephelometer By standardized hemolytic methods	1
12b.	<u>Evolving Hypocomplementemia</u>	Significantly reduced level of any of the items mentioned above (plus C4) with respect to the last observation	1
		FINAL SCORE #	

* If this system (or manifestation) is the only one involved among items 1-20, add 2 more points.

† Excluding patients with end stage chronic renal disease.

If the final total score is not an integer number, round off to the lower integer for values <6 and to the higher integer for values >6.

If final total score is >10, round off to 10.

Appendix 8: BILAG (British Isles Lupus Assessment Group) Assessment Form

BILAG ASSESSMENT FORM (version 3)

(All events refer to the previous month unless noted otherwise.)

Patient:

Maximum dose in last month or since last visit

GENERAL

Answer: 1) Improving 2) Same 3) Worse 4) New

1.	Pyrexia (documented)	()
2.	Weight loss – unintentional > 5%	()
3.	Lymphadenopathy/splenomegaly	()
4.	Fatigue/malaise/lethargy	()
5.	Anorexia/nausea/vomiting	()

MUCOCUTANEOUS

Answer: 1) Improving 2) Same 3) Worse 4) New

6.	Maculopapular rash – severe, active (discoid/bullous)	()
7.	Maculopapular eruption – mild	()
8.	Active discoid lesions – generalized, extensive	()
9.	Active discoid lesions – local, inc. lupus profundus	()
10.	Alopecia – severe, active	()
11.	Alopecia – mild	()
12.	Severe panniculitis	()
13.	Angioedema	()
14.	Extensive mucosal ulceration	()
15.	Small mucosal ulcers	()
16.	Malar erythema	()
17.	Subcutaneous nodules	()
18.	Pernirotic skin lesions	()
19.	Periungual erythema	()
20.	Swollen fingers	Y/N
21.	Sclerodactyly	Y/N
22.	Calcinosis	Y/N
23.	Telangiectasia	Y/N

NEUROLOGICAL

Answer: 1) Improving 2) Same 3) Worse 4) New

24.	Deteriorating level of consciousness	()
25.	Acute psychosis or delirium or confusional state	()
26.	Seizures	()
27.	Stroke or stroke syndrome	()
28.	Aseptic meningitis	()
29.	Mononeuritis multiplex	()
30.	Ascending or transverse myelitis	()
31.	Peripheral or cranial neuropathy	()
32.	Disc swelling/cytoid bodies	()
33.	Chorea	()
34.	Cerebellar ataxia	()
35.	Headaches – severe unrelenting	()
36.	Organic depressive illness	()
37.	Organic brain syndrome inc. pseudotumor cerebri	()
38.	Episodic migrainous headaches	()

MUSCULOSKELETAL

Answer: 1) Improving 2) Same 3) Worse 4) New

39.	Definite myositis (Bohan and Peter)	()
40.	Severe polyarthritis – with loss of	()

function	()
41. Arthritis	()
42. Tendonitis	()
43. Mild chronic myositis	()
44. Arthralgia	()
45. Myalgia	()
46. Tendon contractures and fixed deformity	()
47. Aseptic necrosis	()

CARDIOVASCULAR AND RESPIRATORY

Answer: 1) Improving 2) Same 3) Worse 4) New

48. Pleuropericardial pain	()
49. Dyspnea	()
50. Cardiac failure	()
51. Friction rub	()
52. Effusion (pericardial or pleural)	()
53. Mild or intermittent chest pain	()
54. Progressive CXR changes – lungs	Y/N
55. Progressive CSR changes – heart	Y/N
56. ECG evidence of pericarditis or myocarditis	Y/N
57. Cardiac arrhythmias including tachycardia > 100 in absence of fever	()
58. Pulmonary function fall by > 20%	Y/N
59. Cyto-histological evidence of inflammatory lung disease	()

VASCULITIS

Answer: 1) Improving 2) Same 3) Worse 4) New

60. Major cutaneous vasculitis including ulcers	()
61. Major abdominal crisis due to vasculitis	()
62. Recurrent thromboembolism (excluding stroke)	()
63. Raynaud's	()
64. Livedo reticularis	()
65. Superficial phlebitis	()
66. Minor cutaneous vasculitis (nailfold, digital, purpura, ulcers)	()
67. Thromboembolism (excluding stroke) 1 st episode	()

RENAL

Answer with number (value) or Y/N

68. Systolic BP mmHg	()
69. Diastolic BP (5 th phase)	()
70. Accelerated hypertension	Y/N
71. Dipstick (- = 1, ++ = 2, +++ = 3)	()
72. 24 h urine protein (g)	()
73. Newly documented proteinuria of > 1 g/24 h	()
74. Nephrotic syndrome	Y/N
75. Creatinine (plasma/serum)	()
76. Creatinine clearance/GFR (ml/min)	()
77. Active urinary sediment	Y/N
78. Histological evidence of active nephritis (within 3 months)	()

HEMATOLOGY

Answer with number (value) or Y/N

79. Hemoglobin (g/dl)	()
80. Total white cell count x 10 ⁹ /l	()
81. Neutrophils x 10 ⁹ /l	()
82. Lymphocytes x 10 ⁹ /l	()
83. Platelets x 10 ⁹ /l	()
84. Evidence of active hemolysis	()
85. Coombs test positive	()
86. Evidence of circulating anticoagulant	()

XI. ACKNOWLEDGEMENT

This is probably the last text that I'll write as a college student. As such, I'd like to take this opportunity to thank all people who have helped me in my four years of stay in college. I may not be able to mention all but I do assure you that your good (and even the not-so-good) deeds are well- remembered ☺

1. To my mommy, daddy, ate and tita elpot, thanks for providing me everything I needed, esp. the laptop, to finish this course. Your non-stop reminders (and bribes) for me to do and finish my SP asap kept me pushing myself to do my SP even when I don't feel like doing it. Also, thanks for supporting my decision of choosing comsci over nursing. Right now, I can't imagine myself being into any other course aside from comsci.
2. To my profs, thanks for inspiring me in ways you never thought you did. Ma'am Sheila & Doc Magboo, salamat po sa mga constructive criticisms and inputs/ suggestions on how I can possibly improve the system. SP was hard but nothing beats the feeling of seeing my own SP's hardbound copy! Sir Solano, thanks for the career advice. Salamat din to Sir Chua, Sir Co, Ma'am Abby, Sir Zamora, Sir Tuano, Ma'am Anna, Sir De Armas, Sir Regaspi, Ma'am Bastero, Sir Li at syempre, Ate Shula and Ate Eden.
3. To my blockmates ko na nakasama ko ng apat na taon, salamat! College was fun, I should say. Andy, you're the spontaneous story teller. Salamat sa mga kwentuhan tungkol sa sari-saring topics. There wasn't a dull moment pag ikaw ang nagkekuento. Angge, hanga ako sa determination mo to finish everything that needs to be done. You're a very responsible leader too. April, salamat sa mahaba-habang kwentuhan natin sa tapat ng 114 and for being my seatmate before. Brotha Rac, salamat sa pakikinig sa mga kwento at frustrations ko, sa 2 cds ng songs and for simply being my brotha in school. Cromwell, thanks for being my mood absorber. I learned a lot from being your groupmate. Donnel, salamat sa pagrereply sa mga texts lalo na kapag tinatanong ko kung nandyan na ba yung prof at thanks din for the lens cleaner. Farrah, salamat sa pagiging ever kind at pagturo sakin sa math nung 1st yr. Ginel, salamat sa pagsabay sakin sa lrt, pagtulong sa sms, pakikinig sa mga kwento ko, pagsama-sama kina milly, for sharing the hopia, sisig and dvd marathon addictions. Ivy, thanks for offering

help nung defense ko. Jackie, thanks for sharing your tasks with me nung nago-ojt pa tayo. Naalala ko tuloy yung mga milo/coffee/juice breaks natin sa pantry once in a while. Karen, thanks sa pagsabay sakin samin ni ginel sa lrt and for sharing the siomai addiction. Lhen, thanks for being my kambal in school, for listening to my frustrations and fears lalo na nung job fair sa diliman and for remembering me even if may trabaho ka na. Marina, salamat sa pagpapahiram ng os installer at pagsama sakin habang hinihintay ko yung turn ko for the SP defense. Rhema, I admire your strong faith in Him and thanks din for the fashion tips (though I never practiced them). Roy, salamat sa mga comsci helps. Ruth, salamat sa pagtulong-tulong kapag may kelangang gawin sa soco. Shermaigne, salamat sa pagtulong maset-up nung project namin for the exhibit. You're one of my idols pag dating sa MPs. Zarah, Rhonna & Geonard, salamat sa pagpapatuloy sa apartment nyo nung gumagawa kami ng mp at video for comm3. At sa iba ko pang blockmates- Pinpin, Gina, Karlo, Christopher, Jenzen, JC, Pearl, Isla, Cathie, Mike, Noah, Christine, atbp. na hindi ko matandaan at this moment- salamat!

4. To Dr. Millicent Ong, thanks for helping me with this SP.
5. Salamat sa OSA kung saan ako nag- student assistant for almost a year. Thanks to Ma'am Nymia, Ma'am Elen, Sir Renz, Ma'am Becky, Ma'am Linda, Ma'am Josie, Sir Homer, Ma'am Rhoda, Ma'am Zinny, Ma'am Marliz at Sir Leo for being so kind to me and for teaching me how to be more professional, how to balance my time, how to deal with people much older than me, and syempre, how to value my hard-earned money. Salamat din sa mga nakilala kong SAs like Faith & Ivy ng OSA, Steph ng Grad Ofc, Kuya Peter ng Cash Ofc at Karina ng Accounting.
6. To my co-volunteers at RVC, thanks! Though I was the only volunteer from comsci, I didn't feel na iba ako especially when I'm with the company of Steph, Mark, Dora and Judie.

Maraming salamat sa inyong lahat. I did learn a lot from you. I wouldn't make it and be the person I am today if not because of your help.
