I. INTRODUCTION

A. Background of the Study

Nowadays several high schools, and most especially universities, all over the Philippines use electronic registration systems or online enrollment systems so that they could provide an efficient service considering the number of students that they have and also because it makes enrollment an easier task to accomplish. A web application is the most popular and common form of enrollment system today because of its various advantages. Not only is it accessible to everyone as long as internet connection is available, but also it relieves the hassle of having to install the system in hundreds or even thousands of client computers. Also, web applications are platform independent, which means that the system will be able to run and perform as specified regardless of the operating system the client has. All the user needs is a standard web browser and internet connection.

Web application is adapted in this study because the aim of this system is to allow parents, guardians, faculty members, clerks, and administrators to have 24-hour access of the proposed system from anywhere, at anytime, through any client computer without actually having to install or distribute it each time that they wish to use it. The system

also wishes to eliminate the need to fall in line and personally go to the school just to process the enrollment of the students.

Southernside Montessori School, more commonly known for its acronym SMS, is a private non-sectarian school in the Philippines. It was founded by Nelia Barlis in 1988. A school that once started as a small pre-school with a small faculty dramatically expanded through the years. Now this institution offers Pre-School education up to High-School education. SMS houses a lot of students with about 100 faculty, maintenance, security, and administration staff. Students live not only from nearby subdivisions and villages within Muntinlupa but also from other municipalities like Las Piñas, Sucat, and San Pedro, Laguna. Currently, its campus is located along Katihan Street corner Camella Homes IV at Barangay Poblacion, Muntinlupa City. [1]

For the past years, since SMS was first established, they have used the manual enrollment system. The issuance of receipt after the parents have paid the tuition and other fees, no matter what mode of payment they chose, was the only part that was somehow computerized.

The enrollment period usually lasts for one week. The order of enrollees is classified by the first letter of the students' surname. [2] Parents or guardians personally go to the school to enroll which is why some working parents or guardians either take a day off or half day from their work to process the enrollment of their children. They

experienced falling in line for a few hours and filling up long registration forms repetitively.

If manual enrollment system is to be continued it will take them at least a week to process all the students' records. So having an electronic enrollment system will be a great solution to the hassles and problems of manual enrollment systems.

B. Statement of the Problem

At present, Southernside Montessori School doesn't have an online registration system that takes advantage of the benefits of technology. What they have is a manual system that does not only take some time to process but is also tedious and tiring to accomplish. Especially for parents who have more than one child enrolled in the school as well as for full time working parents.

One of the problems with the manual system that they have was filling-up of official documents and forms. Since most of the students' records are still on papers, every year all the parents or guardians of the enrollees, old or new students, need to fill-up multiple registration forms for the record and copy of the registrar's office, clinic, cashier, and for the parents themselves in order to process the enrollment. This could cause data redundancy and could possibly complicate the enrollment process.

Since filling out of the forms is time consuming, another problem arises. Parents or guardians were sometimes forced to take a day-off just to process the enrollment of their children because they have to personally go to the school to fill-out long forms and fall in line.

Another problem is that every time that the parents will pay the tuition fees of their children (for those who chose semestral, quarterly, and monthly mode of payments), they need to bring their copy of the registration form. A problem that could arise is when the cashier's record and the parent's record do not match. That is why, a central repository of the student's records is essential to avoid such problem in the future. This way, both the cashier and the parents will be viewing only one record which will be updated immediately after the payment has been made.

As technology improves daily, schools, and not only business establishments, should also benefit from the advantages that could be brought about by the automation of their processes.

C. Objectives of the Study

A. General Objective

E-nrollSYS aims to improve enrollment procedures that will decrease working time. It also seeks to improve the file management of Registrar's Office for the easy retrieval of the student records as well as to help them in monitoring student records and

transactions. The system also wants to decrease data redundancy because this could be the source of inconsistent records/files.

B. Specific Objective

E-nrollSYS is an Electronic Enrollment System that has five users, the parents or guardians of the students, the registration clerks, the faculty, students, and the system administrator. It has the following functionalities:

1) Parents or guardians are the primary users of this system. E-nrollSYS enables the parents or guardians of the students to:

   a) View the latest enrollment status of their children.

   b) Input other information needed for student's record like the parents'/guardians' details and students' medical records.

   c) View the list of subjects and schedules of their children.

   d) View grades of their children after every quarter.

2) Registration clerks will be the secondary user of the system. They have control over the information of the students. The system permits the school clerks to:

   a) View students' record.

   b) Approve or disapprove the registration of a student based on their enrollment status.

   c) Print out a final student list that will be forwarded to the teachers for the sectioning process.

   d) Print the registration form of students in excel file.

   e) View/Generate academic achievers.

f) Create class schedules of sections.

g) Add/Edit students of a section.

h) Create a student and sibling directories in excel file.

i) Add users or accounts.

j) Enable/Disable accounts.

k) View user account details.

3) Faculty could do the following:

a) Upload grades and remarks to the students after every quarter.

b) View the ranking of the students, per section and over-all.

c) Mark students who pre-registered for the following school year.

4) Students would be allowed to do the following:

a) View their periodical grades after every quarter.

b) View the comments of their adviser about their performance each quarter.

c) View the schedule of their instructors.

d) View their class schedule.

5) The cashier will be able to:

a) Produce Annual, Semestral, Quarterly, and Monthly Payments Report

b) Assess tuition fees and record payments

c) Update tuition fee list.

d) Update discount factors for scholarships.

D. Significance of the Project

Every year, filling up registration forms and submission of student's records of over 3000 students is the primary reason why enrollment period in Southernside Montessori School takes about a week to finish. E-nrollSYS is built to help the school with regards to their enrollment transactions.

In coming up with this kind of system, enrollment period will be reduced from a week to one or two days. This system makes transactions like viewing of student's enrollment status, recording payments made, retrieving student records, etc. easier and faster to accomplish not only for the parents or guardians but also to the teachers and school officials.

The main beneficiary of this system is Southernside Montessori School. SMS would be adapting a new innovation of technology through this web-based registration system that will enable them to work with optimum performance. This system will compensate the problems and flaws that they may have encountered in the past. The staff wouldn't be having a hard time in preparing the registration forms and producing reports for the administration anytime that they might need it because the system will be supplying this for them.

The burden of filling up lengthy and multiple registration forms by parents or guardians for the students will definitely be avoided because they do not need to

accomplish multiple copies of the forms because all the information that a particular office or department needs will be automatically forwarded to them.

On the following years that the students will enroll, only the new students need to go through filling up registration forms. Old students only need to update the data on their records if there are some changes that they need to make if not, enrollment will be much easier and faster for them. If the old students' records reflect that they do not have any unpaid balances anymore, all that's left to do is pay the tuition fee directly to the cashier.

Parents and guardians wouldn't have to take a day-off to process the enrollment of their children. They could easily enroll their children online at the comfort of their offices or even at home and only go to the school to settle and pay the tuition fees. No more falling in line for hours. A faster transaction is what the system could provide.

Since there is already a central repository for the students' records, then retrieving any needed information would be easier for everyone. Discrepancies that could occur with the manual system could be avoided with this system. As soon as the data of the students was submitted to the system, E-nrollSYS will automatically provide the offices the information that they need from the registration forms. Teachers will need to maintain just one record for the grades of the students.

E. Scope and Limitations

The proposed online registration system for Southernside Montessori School has nothing to do with any existing website of the school. The proposed website will only be used for enrollment purposes. These are the following limitations of E-nrollSYS:

1) Online payment is not part of the automation because as of the moment the school accepts checks and cash payments only which is directly paid at the cashier's office. This means that parents or guardians would still need to go to the school to pay the tuition fees. The school offers payment options such as annually, semestral, quarterly, and monthly mode of payment. It could be an optional adjustment to the system in the future if the school settled some matters regarding their payment options.

2) The proposed system wouldn't generate the official receipt. The system only records the payments made.

3) The system only needs the computed/final grade of the students to be uploaded for viewing purposes.

4) Fees other than tuition fee like miscellaneous fee, graduation fee, confirmation fee, first communion fee, school service, JS prom fee, fieldtrips, uniforms, and books will not be included in the computation and printing of registration form.

F. Assumptions

Listed below are the assumptions made for E-nrollSYS:

1) The school registrar will also be the system administrator because she's the one who creates, enables, and disables user accounts in the system. She knows who should be given accounts and access to the records in the system.

2) Excel files that will be uploaded to the system follows the required format.

II. REVIEW OF RELATED LITERATURE

One of the most important steps in the development of this system and in conducting any research project is the review of related literature. This chapter enables the readers to familiarize themselves to the case study. Previous and related studies would give the readers and future researchers an idea on how the proposed system works. Studies and previous works presented in this chapter were chosen to provide information for the readers.

At present, various online enrollment/registration systems are being used by a number of schools, colleges and universities. These institutions utilize the advantages brought about by the automation of their manual systems. The systems were either developed in-house or are outsourced from different software companies. Some were focused mainly on the registration process, while other systems include other functionalities which were useful for students. The interface of the systems vary, some were made to be more appealing and well thought of than others. But what's important is the systems deliver what is expected of them, a fast, accessible, efficient, and stress-free enrollment, as well as an effective student records archive.

Centralised Online Registration System (CORS) (http://www.nus.edu.sg/cors/) is used by the National University of Singapore. CORS is designed for students to register

for their modules; with the exception of students from Yong Loo Lin School of Medicine and Faculty of Dentistry, who should refer to their department for module registration instructions [5]. Students need to use CORS to register their General, Minor, Breath, GEM, and SS modules during the registration period because it is built to ease students' registration processes.

NUSNetid and password is needed to be able to log-on and access CORS. After logging in, the students would be able to view and enlist the modules across faculties that they prefer. From the points that the students accumulated over time, the system allows students to bid for subjects that they prefer through an online bidding system. Module selection and module allocation are the critical registration processes not only for the students but also for the University which is why CORS ensures that allocation processes are neutral and fair. It also allows optimal planning and management of resources of the teaching departments. Students could also submit their appeals for module related matters [5].

CORS helps students practice responsibility over their decisions because the bidding system requires careful consideration of their priorities. Each decision that they make will have a great impact on their future choices. The bidding system could teach the students how to make decisions and appreciate the consequences as well as the need to weigh their options.

Youngnam University's Education & Administration System for Youngnam (EASY) (http://enter.yu.ac.kr/) is another good example of an online student registration system. Youngnam University is one of the premier private universities in South Korea with a student body of 35,000, which is why online course registration presented a challenge [6]. At first, they encountered some problems regarding the client-server system that they implemented. Students still need to come to campus during semester breaks to use a university workstation and enroll. To allow students to register even at their own homes, the IT staff added a Web system to handle some of the load however due to heavy usage screen displays are slow and web server crashes are experienced. Even with the course of limiting the number of simultaneous users the response time was 40 seconds which is too long for students.

And so, Youngnam University turned to Fujitsu Korea to solve the problems that they're having. And as a solution, an upgraded EASY system was implemented using the stability and high-performance capabilities of the Interstage Application Server, running on Fujitsu PrimePower servers. And as a result, after the re-launch on June 2003, noticeable change in the system's performance is seen. Lee Byeong-wan, Youngnam Information Systems of Youngnam University said, "We processed 70 percent of all requests (34,000) during the five minutes after opening. And our system response time was consistently less than five seconds." Everyone was pleased with the new system. "As a field worker, who knows very well how difficult the registration work was before, I am glad to finish registration successfully—this year was very different from the past." (Section Chief Kim Jin-ho, 2003) [6]

Massey University in New Zealand also encourages students, especially their international students, to enroll online due to a lot of benefits. Through their online portal, students could experience the convenience of enrolling at a time to suit, 24 hours x 7 days per week [7]. The system was made to be generally easier and faster to accomplish compared to postal enrollment because they could even enroll from overseas without missing deadlines or worrying about postage times and postage costs. Enrollment could be done at their own speed without any pressure. The best part is they can be certain that Massey received the enrollment.

Students could do the following thru Massey University's portal (http://enrol.massey.ac.nz/): enroll for the programs, minors, majors, endorsements, specializations, and papers they want to study, make changes to their enrollment such as adding and withdrawing papers, and changing a program or major, update personal details, view the timetable combinations based on enrolment choices, calculate and pay fees, and check details without having to personally talk/see someone from Massey [7].

Students who wish to study in Aragon, Burlingame, Capuchino, Hillsdale, Mills, Peninsula, San Mateo, Adult School and Middle College which belongs to San Mateo Union High School District should process their new student enrollment online through San Mateo Union High School District's portal (https://secure.infosnap.com/family/message.aspx?code=actionprivate). Given that the residency of their families has been verified, they will be provided with a "SNAP CODE"

which they will use to access the on-line enrollment form. After they completed the on-line enrollment, the Attendance and Welfare Department will verify submission and issue a school of assignment [8]. Once a student is verified, they receive a post card indicating the student's assigned school.

A student who accomplished their enrollment forms on-line and whose residency have already been verified will have an advantage during the priority enrollment window. They will be eligible to do the following on-line: receive priority assignment to school of residence, apply for a sibling transfer to another school in the District, and apply for an Intra-District transfer to a non-resident school within the District [8].

The main goal of online registration and information systems is to make processes easier to accomplish not only for the students but also for the registration, administration staff and faculty. This is what Adventist University of the Philippines On-line Information System (AOLIS) delivered in the year 2000. After a total of 11 months of development, the system was finally installed and used by the students and staff of the University. From that time on departments and colleges, students and teachers, the accounting and registrar's office got a reduction and speedup of work, giving AOLIS an exponentiation of duty and responsibility [9].

AOLIS has proven to be a very helpful tool during the enrollment period of the University. It solved major problems encountered in the past which are slow processing

of transactions, too much paper work, tedious enrollment procedures, and inaccessibility or unavailability of data that were needed immediately.

AOLIS wasn't only limited to enrollment and reports generation. It has other services which are very useful for the students and University staff. AOLIS Personal which enables students (parents, and sponsors) to check their statement, grades, and cafeteria balance and history from the internet, Student Schedule which helps students locate each other, Teacher Schedule which helps other people locate instructors in their classes, and Guidance Department System which stores tests scores and generates graphed printout of personality and capability test results are some of the services that the system boasts [9].

Ateneo Integrated Student Information System (AISIS) (http://aisisonline.ateneo.edu) is another example of an online registration system that is being implemented in big institutions. AISIS is a portal not only for Ateneo undergraduate students, but also for the University's faculty, and staff. Through the AISIS Online, officially enrolled Ateneo students may view pertinent school information including their IPS, grades, class schedules and the like [10]. They could also enlist their subjects and print their assessment forms at home through AISIS. Payment of their tuition fees could also be done online. On the other hand, Ateneo faculty and staff that could access AISIS could access their class schedules and submit grades even when they are outside the campus.

Enlistment updates and other important announcements are also posted on the home page of AISIS. Various tutorials, FAQs, and guides on how to use the online information system were also included so as to help students that might have questions on how to use the system [10].

De La Salle University (DLSU) is proud to be the first University in the Philippines to offer online enrollment to its students through My.Lasalle Portal (https://my.dlsu.edu.ph/). For De La Salle University students and faculty members, My.LaSalle (MLS) serves as a personal conduit to all campus information, and a personal assistant in carrying out university-related transactions within DLSU [11].

All DLSU students except freshmen, transferees, and returnees can enroll anywhere within their scheduled period through MLS web page using their MLS account. They could enlist on their preferred course and section provided that it is still open. Actual enrollment count per section and course could be done in real-time. No more lining up in the Registrar's Office would be required. This portal also provide students information about course schedule, account balance, grades for the term, schedules of final exams, and course card distribution. Undergraduate students can encode their extra-curricular activities through MLS. Not only that, they can also check their e-mails even from an Internet café without the need to actually dial up to the DLSU servers. Dropping of subjects and application for graduation could also be processed online [12].

Faculty members can submit final grades and request for change of grade online even in the comforts of their own homes. They could also compare the course load assigned to them and those in the records of the Office of the University Registrar through MLS. Like the students, they could also send and view e-mails using their MLS account [12]. Truly, MLS is a great help not only for the students but also for the faculty members of DLSU.

Another example of a full featured web-based application being used by colleges in the Philippines is Colegio de San Juan de Letran's DotLetran Student Portal (http://dot.letran.edu/). DotLetran is an in-house web application developed by Letran IT Center which allows easy management of administrative and student data online. Jan Dizon, web master of ITC said "Online enrollment aims to lessen the steps in enrollment and give the students freedom to choose their subjects and schedule." [13] Statistics show that 90% of Letran students have easily completed the enrollment process through DotLetran as compared to the old system.

It incorporate features such as: full student/course details, grades inquiry, subject offering, PDF printable application forms, school schedules and activities, short messaging system (SMS), PDF printable multiple custom report card options, multimedia course delivery/ management, custom searches, reports and statistics, student personal calendar, curriculum checklist, subjects taken, on-line grades, enrollment, adjustment, change of grade, subject withdrawal, account balance inquiry, and more. The system also

has auto-advising capability because it is equipped with pre-requisites, overload, conflict, and clearance checkers [14].

Important academic and administrative school information could simply be accessed through DotLetran. This allows students to make knowledge-driven decisions. Only students with activated accounts and Dot-PINs could access the system. Students are thankful for DotLetran because obviously, the enrollment system now is better and faster compared to previous systems.

iEnroll (http://www.ue.edu.ph/iEnroll/login.html) is University of the East's Online Admissions/Registration System. Through iEnroll, the Office of Admissions examines, processes, and encodes the entrance credentials of freshmen applicants, transferees, degree-holders, and cross-registrants seeking admission to the University [15]. Also, student records such as student's name and number, GWA, CET, and other essential information related to registration/admission could be easily facilitated.

Using their student number, access code, and birth date, upperclassmen that don't have outstanding accounts, no records of scholastic delinquencies and/or administrative case, those who were not dismissed or issued transfer credential could select the subjects that they need to enroll using a curriculum template. They could also choose the mode of payment that they prefer, and immediately print a temporary registration card from wherever they may be. Foreign students could also use the web-based enrollment system as long as they have been given clearance by the DRRM and Office of Admissions.

Once subjects are enrolled thru iEnroll and a temporary registration card has been printed, adding and deleting of subjects are no longer allowed. The subject/s that were selected by the students will be reserved to them for three days and they must pay the down payment or full payment at the bank or at UE within two (2) days to avoid expiration of reserved subject/s. Admission/Registration of freshmen applicants, transferees, degree-holders, and cross registrants to UE was definitely made simpler, easier, and faster [15].

In Bacolod City, the University of Negros Occidental-Recoletos has experienced an enhanced enrollment system and academic record keeping thru Academic Information Management System (AIMS) (http://enrollment.uno-r.edu.ph/students/). AIMS is a software created by Pinnacle Asia for UNO-R for easy access of students to the school and school academic records [16].

AIMS systematized and consolidated inputs from the college registrar with the accounting office. It made records of both offices analogous with each other. "We were able to solve the loopholes in the past where millions of pesos cannot be counted because their inputs cannot be recorded." (Bro. Jaazeal D. Jakosalem, 2007) [16]

Students, as well as their parents, can view their academic records on-line. Enrollment procedures and processing time has been greatly reduced to only 30 minutes with corresponding accounts due within 5 days. They could also read school

announcements and notices online. Faculty members could post course/lecture materials for their students. They could also encode grades through AIMS. Alumni may request and receive their transcript of records online. No doubt, AIMS greatly improved the school's information technology infrastructure [16].

III. THEORETICAL FRAMEWORK

- **Brief History of Southernside Montessori School**

Southernside Montessori School is a non-sectarian institution duly recognized by the Department of Education. It was established under the pioneering spirit of Mrs. Nelia A. Barlis who is inspired by the philosophy of Dr. Maria Montessori and her dream of giving the people of Muntinlupa an affordable but high standard of education. [1]

Southernside Montessori School is committed to provide an education that will lead a student to be a creative social factor in the building up of our society. Being a Filipino school, it inculcates the search for a new knowledge which is relevant to the realities. It aims to develop the learner to acquire skills which are necessary in the service for national development. Founded in 1988 with initial enrollment of 58 students and 3 staff, Southernside Montessori School now has a population of 2,287 students for School Year 2005-2006 with more than 100 teaching and non-teaching personnel. [3]

It has produced 5 students awarded with the distinction of Most Outstanding Students of Muntinlupa, some of whom are still enjoying scholarship grants from the City Government of Muntinlupa. A great number of students qualified in Philippine

Science, Manila Science and Muntinlupa Science High School. High School graduates passed the entrance tests of various prestigious schools like University of the Philippines, Ateneo University, De La Salle University, University of Santo Tomas, San Beda College, St. Scholastic College, and others. [3]

From its former site (extension of the residential house of Mr. and Mrs. Danilo Barlis at Katihan), SMS now occupies close to one-hectare lot with modern facilities. All classrooms are air-conditioned. There are ample spaces for the students to play or they can sit at the bench under the trees enjoying fresh air. [3]

Facilities includes the following: Playroom for pre-school students, Mini-library for young readers, Nutrition and Food Technology Laboratory-Lecture room, Practical Arts Room, Biology, Chemistry, and Computer Laboratories, Drafting Room, Gymnasium, Library, Audio Visual Room, Students Lounge, Speech Laboratory, Canteen and Garden. [3]

- **Enrollment Process of Southernside Montessori School**

Since the school has been established up to this present day SMS has been using forms that are to be filled up by the parents/guardians of the students so that the school can have a copy of the students' records and keep track of the transactions for the whole year. But as the population of the school grows, the current system is proven to be no longer efficient and convenient. [2]

A. Steps to follow prior to enrollment

New students or transferees, whether pre-school, elementary, or high school, will be accepted for enrollment in SMS if they will be able to accomplish the following:

1) Submit the requirements to the Registrar's Office:

   a. Photocopy of Live Birth Certificate and Baptismal Certificate (Presentation of the original is required)

   b. Form 138 for Grades II to High School (Certified True Copy of the Latest Grades)

   c. Pre-school Credential for Grade I

   d. Letter of recommendation from the Principal or Guidance Counselor for Grades IV to High School

   e. Two (2) "1 x 1" I.D. Picture

2) Pay the Admission Test Fee at the Cashiers Office.

3) Proceed to the Guidance and Testing Center to secure Application Form and schedule of examination and interview.

4) Pass the admission test and interview on the given date.

   Admission Test Result and Interview will be the basis of the pupils' acceptance and placement in SMS.

B. Enrollment procedures

Before enrollment period which falls between the months April-May, a pre-registration period during the last week of December to the last day of January is

held for old students. Those who wishes to enroll the following year and wants to avail a sure slot will be paying Php 500 as a reservation fee. Those who paid for the reservation fee will have a Php 100 discount on tuition fee given that the student will be enrolled not later than May or else no discount will be given. [2]

1) For new students

    a. Secure enrollment slip from the Guidance Counselor

    b. Proceed to the Registrar's office and submit the Original copy of Form 138 (Report Card) for Grades II to High School

    c. Fill up the registration form

    d. Present the registration card to assessment area

    e. Pay at the cashier's office

    f. Return to Registrar's office to get request form for Form 137 from the previous school attended

2) For old students

    a) Submit enrolment slip (for early enrolment) or Report card (regular enrollment) to the Registrar's Office

    b) Fill-up the registration form

    c) Pay tuition fees at the Cashier's Office

    d) Return to the Registrar's Office for finalization of enrollment

The students may choose to avail of early enrollment after securing enrollment slip and good behavioral record from the Guidance Counselor and submit them to the Registrar's Office. [1]

C. Scholarships or Discounts on Tuition Fees and Miscellaneous Fees

Scholarships or discounts on tuition fees and miscellaneous fees are also offered to deserving and outstanding students of SMS. Other fees such as books, uniforms, school service, field trip, JS Prom, Graduation fee, Confirmation, and First Communion are not discounted. [2]

This privilege will be given to incoming freshmen students who are elementary graduates of SMS (Scholar A), incoming freshmen students coming from other schools (Scholar B), band members, students with 2 or more siblings also enrolled in SMS, and students with parents who are faculty members or office staff of SMS. [2]

1) Scholar A

Incoming first year students who belong to the top 3 of the batch who graduated from elementary in SMS is in the Scholar A bracket. Scholar A students will be paying only a fraction of their tuition fee.

- 1st honor - Php 1,000 plus miscellaneous and other fees.

- 2nd honor - Php 2,000 plus miscellaneous and other fees.

- 3rd honor - Php 2,500 plus miscellaneous and other fees.

2) Scholar B

Incoming first year students who graduated with honors from their respective schools will be receiving discounts from their tuition fee.

- 1st honor - 100% free of tuition fee, but will be paying for miscellaneous and other fees.

- 2nd honor - 50% discount on tuition fee, but will be paying for miscellaneous and other fees.

- 3rd honor - 30% discount on tuition fee, but will be paying for miscellaneous and other fees.

Scholar B students with parents who have an annual Income Tax Return (ITR) of Php 50,000 and below will be receiving an additional 50% discount on their miscellaneous fees.

On the following year, when the students are on their second year in SMS, only the Scholar B students who belong to the top 3 of the batch will continue to receive discounts on their tuition fees. [2]

3) Band Members

The City of Muntinlupa also has its own band that performs during festivals, special events or occasions, and concerts held mainly within the city. Members come from various schools, universities, and colleges within Muntinlupa. Band members who are studying in SMS will only be paying Php 2,000 for their tuition fee plus miscellaneous and other fees.

Once admitted in SMS, they will automatically be awarded with the reduced fee for as long as they are member of the band. [1]

4) Students with 2 or more siblings in SMS

   For students who have other siblings enrolled in SMS, they will be given respective discounts on their tuition fees. [1]

   - If the student to be enrolled is the 3rd child, 50% discount on tuition fee will be given.

   - If the student is the 4th child, he/she will be granted 100% free of tuition fee.

   - Miscellaneous and other fees will be paid in both cases.

5) Students with parent/s who are employees of SMS. These are the faculty members, security personnel, maintenance, registration clerks, cashier, and administration staff.

   Students whose parent/s is an employee of SMS will be receiving discounts on tuition fees based on the number of years their parents had served in the institution. [1]

   - 1 year of service - 15% discount in tuition fee of 1 child

   - 2 years of service - 25% discount in tuition fee of 1 child

   - 3-4 years of service - 35% discount in tuition fee of 1 child

   - 5-6 years of service - 50% discount in tuition fee of 1 child

   - 7-9 years of service - 100% free of tuition fee of 1 child

- 10 years and above - 100% free of tuition fee of 2 children

D. Pre-Registration of Students

Students who would still be enrolling in SMS the following academic year could avail of the pre-registration. Pre-registering will ensure them a slot for the coming school year. The pre-registration period is between the last day of December up to the last day of January wherein they would pay Php 500 for this.

Those who pre-registered and will enroll within the regular enrollment period, April to May, will be given a Php 100 discount on their tuition fee. Otherwise, they wouldn't be given any discount even if they pre-registered. [2]

E. Payment

They will be allowed to choose the mode of payment that is most convenient for them. There are four modes that they could choose from: Annual, Semestral, Quarterly, or Monthly. The cut-off of payments is every 10th of the month, whichever mode of payment they will chose. If ever they failed to pay their balances on or before the cut-off period, an additional 2% surcharge/penalty will be added to the amount payable. [2]

As of the moment, payments will only be accepted in cash or check. In cases where SMS experiences a bouncing check from a payment made by the student, then they will require the payment to be made in cash only. [2]

F. Obtaining Form 137

Students who wish to obtain a copy of their Form 137 need to go to the Registrar's Office where a requisition form will be issued. A Php 50 fee will be paid for the request of printing of Form 137. It will be issued and ready for pick-up after 3 working days. [2]

G. Sectioning of Students

Students who belong to the top 20 of the batch will automatically belong to the cream/star section, a few aspiring students will be added to complete the required number of students per section. The rest of the remaining students will be chosen by would be class advisers to form other sections. Their grades or standing doesn't matter at this point because the sectioning process is not standing-based. In cases where a new student is outstanding from his/her previous school, the pupil wouldn't automatically be placed in the cream section. [2]

- **Information System**

A computer-based system with the purpose of providing information to users in one or more organizations is an information system. It is an integrated set of components for collecting, storing, processing, and communicating information. It includes data processing and office automation applications as well as many expert system applications [17]. Business firms, other organizations, and individuals depend on information systems for accomplishing tasks such as managing their operations,

competing in the marketplace, supplying services, and augmenting personal lives. Information systems sped up the pace of daily activities, affected the structure and mix of organizations, altered the type of products bought, and influenced the nature of work.

An information system is made up of computer hardware and software, databases, telecommunications systems, human resources, and procedures. Magnetic disks, input-output devices, and telecommunications gear make up the hardware of information systems. Computer software is either system software or application software. System software, also known as the operating system, manages the hardware, files, and other system resources and provides a systematic and consistent means for controlling the computer. Whereas application software is programs designed to handle specialized tasks like general-purpose spreadsheet and word processing programs. A database is a collection of interrelated data organized so that individual records or groups of records can be retrieved whenever needed. Telecommunications are used to connect, or network, computer systems and transmit information. Qualified people are important components of any information system which is why technical personnel and workers in an organization must be trained to utilize the capabilities of information systems. Procedures for using, operating, and maintaining an information system are part of its documentation.

Various types of information systems are available to support operations, knowledge work, and management in organizations. Types of information systems

include Professional Support Systems, Offices Information Systems, Knowledge Management Systems, Management Reporting Systems, Decision Support Systems, and Executive Information Systems [18].

- **Database Management System**

Database Management System (DBMS) is a suite of software applications or programs that enable users to store, modify, and extract information from a database. This allows users to operate all functions within the database without having to know what other users are accessing in the same database [19]. It operates on a database server or mainframe system to manage structured data, accept queries from users, and more importantly to respond to queries. Typical features of a DBMS includes: (1) a way to accept, store, and structure data input as records, tables, or objects which will be used for future retrieval; (2) helps users correlate data by providing query languages for searching; sorting, reporting, and other "decision support" activities; (3) allowing access of multiple users built with security feature that prevents accessing and/or modifying certain types of information; (4) data integrity setting which prevents users from simultaneous access and modification of the same data; and (5) a data dictionary describing the structure of the database, related files, and record information [20].

There are five main types of DBMS namely: relational, multi-dimensional, text retrieval system or "free form", object oriented, and hybrid. The relational database is the most popular type implemented and uses standard query language (SQL) to

retrieve and update information from the database. Data is stored and organized in tables expressed as rows and columns. A multi-dimensional database represents data in multiple dimensions (rand). This model could analyze large amounts of data and produce results with very fast response times. On the other hand, free form database has no structure but its main advantages are the search and retrieve functions. It is best to be used in retrieving data from a large amount of text or report because it can be used to index the whole text to be searched. Object Oriented Database Management System (OODBMS) has the capability of storing and retrieving objects other than mere data - numbers, words etc. It can handle images, graphics, videos and other objects. A hybrid database combines the features of two types of DBMS models. By combining key features of two DBMS it could use the advantage of two databases in managing data [21].

- **Structured Query Language**

Structured Query Language (SQL) is a very powerful and often complex technology allowing users to: describe the data they wish to see, define the data, and manipulate that data in a relational database management system (RDBMS), but is easier to use than traditional computer programming languages. It is widely used by many database software systems, including MySQL, SQL Server™, Postgre SQL, and the Oracle® Database. SQL supports not only texts but also other types of data including digital and multimedia formats such as graphics, audio, and video. [22].

SQL has many uses. It can be used to: execute queries against a database, retrieve data from a database, insert, update, delete records in a database, create and change the structure of the databases, create, modify, or delete tables or other objects within the database, create stored procedures in a database, create views in a database, and set permissions on tables, procedures, and views. Among the most common examples are SQL INSERT - to input data into database tables, SQL SELECT - to get selected data from tables, and SQL UPDATE - to make alterations to existing database tables and records [23].

- **Client-Server Tier**

Client-server architecture is a "network architecture" wherein each computer on the network will be classified as either a server computer, which functions as the "brains" of the organization, or client computers, which are commonly called workstations [24]. The server part is a large-capacity computer that commonly contains data files and applications that can be accessed across the network. A server is dedicated to do a task such as managing disk drives as file servers, printers as print servers, or direct network traffic as network servers. Clients are smaller computers that users use to perform their computer-based responsibilities and run applications [25]. The client is usually a browser such as Internet Explorer, Mozilla or other popular browsers. They interact with the server using protocols which help accurate data transfer through requests from a browser and responses from the server. The web makes use of a connection-less protocol. This means that after every client-server interaction the connection between the two is lost.

There are 3 models of client-server inter-communication namely: Model #1 - Static HTML pages, Model #2 - CGI Scripts, and Model #3 - Server side scripting technologies [26]. An important characteristic of client-server systems is scalability. They can either be scaled horizontally or vertically. Adding or removing a client workstation with only a slight performance impact is called horizontal scaling. On the other hand, migrating to a larger and faster server machine or multi-servers is called vertical scaling [27].

IV. DESIGN AND IMPLEMENTATION

A. Entity Relationship Diagram

   E-nrollSYS is implemented using HTML. Server side scripting is implemented in PHP while MYSQL will be handling the Database Queries. Figure 1 shows the ERD for the system.

D. Data Dictionary

The database schema for E-nrollSYS contains the following tables and their respective fields:

The *users* table contains account information of the users.

Field	Description	Type
<u>**Username**</u>	Unique identifier of the user. Student No., Faculty No., or Guardian No.	varchar(10) not null (PK)
Password	Alphanumeric combination that will prove one's identity	varchar(10) not null
Type	User type or privilege given to an account. It can be either: Student, Registration Clerk, Faculty, Parent/Guardian, or Cashier	Enum ('S', 'RC', 'F', 'G', or 'C') not null
Status	Unique identifier of the status of account. Either enabled or disabled.	Enum ('1' or '0') not null

The *student* table contains necessary information about the students.

Field	Description	Type
SLname	Student's Last name	varchar(50) not null
SFname	Student's First name	varchar(100) not null
SMname	Student's Middle name	varchar(50)
<u>**StudNum**</u>	Student number. Unique identifier of a student.	varchar(10) (PK) not null
<u>**GuardianNum**</u>	Guardian number. Unique identifier of	varchar(10) (FK:

	a guardian/parent.	References *guardian table*)
SecID	Section where the student belongs.	varchar(10) (FK: References *section table*)
SAddress	Home address of the student	varchar(255) not null
SContact	Student's contact number	varchar(15) not null
LevelID	Grade/Year level where the student belongs.	Enum ('JC', 'JACI', 'JACII', 'AC', 'GI', 'GII', 'GIII', 'GIV', 'GV', 'GVI', 'HI', 'HII', 'HIII', or 'HIV') not null
SSex	Student's Sex. Either Male or Female	Enum ('M' or 'F') not null
SBirthday	Student's date of birth	date(mm-dd-yyyy) not null
SBirthplace	Student's place of birth	varchar(100) not null
SReligion	Student's religion	varchar(50) not null
SCitizenship	Student's citizenship	varchar(50) not null
SiblingsNum	Number of siblings currently enrolled in SMS	integer
ScholarType	Type of scholarship the student has	Enum ('SA1','SA2','SA3' 'SB', 'BM', or 'N')
PrevSchool	School last attended by the student	varchar(100)
PrevSchoolAdd	Address of last school attended	varchar(255)
Doctor	Doctor to be notified in case of emergency	varchar(100)
DocAdd	Address of doctor	varchar(255)
DocContact	Contact number of doctor	varchar(15)
AllergyHist	History of allergy of the student	varchar(255)
AllergyMed	Medication for allergy	varchar(255)
AsthmaHist	History of asthma of the student	varchar(255)
AsthmaMed	Medication for asthma	varchar(255)
OperationHist	History of any operation	varchar(255)
SpecialCondMed	Special condition the child suffers or special medication needed	varchar(255)
Rank	Standing of the student	integer
SiblingPos	This identifies the student's position if he/she has other siblings enrolled in SMS	integer
PreRegFlag	Identifies if the student pre-registered for the following school year.	Enum ('1' or '0')
PaymentMode	Mode of payment that is preferred for the tuition fee. Either annual, semestral, monthly, or quarterly.	Enum ('A', 'S', 'M', or 'Q')
Status	Determines if the enrollment was approved, denied, pending or whether the student is graduating or not.	enum('A', 'D', 'G', 'NG', or 'P')

Field	Description	Type
GWA	General weighted average of the student.	float

The *employee* table contains essential information about the employees of SMS.

Field	Description	Type
ELname	Employee's Last name	varchar(50) not null
EFname	Employee's First name	varchar(50) not null
EMname	Employee's Middle name	varchar(100)
EmployeeNum	Employee number. Unique identifier of an employee.	varchar(10) (PK)
Type	Type of employee. Whether security, maintenance, faculty, registration clerk, cashier, or administration staff.	Enum ('S', 'M', 'F', 'R', 'C', or 'A')
Department	Specifies if the employee belongs to pre-school, grade school, high school, or administration department.	Enum ('P', 'G', 'H', or 'A')
EAddress	Home address of the employee	varchar(100) not null
EContact	Employee's contact number	varchar(15) not null
EBirthday	Employee's date of birth	date(mm-dd-yyyy)
EBirthplace	Employee's place of birth	varchar(100)
EReligion	Employee's religion	varchar(50)
ECitizenship	Employee's citizenship	varchar(50)
ESex	Employee's Sex. Either Male or Female	Enum ('M' or 'F')
MaritalStat	Marital status of the employee. Either Single, Married, Divorced, or Widowed	Enum ('S', 'M', 'D' or 'W')
SpouseName	Name of spouse	varchar(100)
EYears	Years of service in SMS	integer not null
EEducA	Employee's educational attainment	varchar(100) not null
ESchoolA	School attended by the employee	varchar(100) not null
Adviser_Section	Contains the advisory section of the faculty members	varchar(10)
Beneficiary	Identifies the student who will benefit the discount given to SMS employees	varchar(10)

The *guardian* table contains information about the parents/guardians of the students.

Field	Description	Type
GFname	Father's name	varchar(100) not null
GMname	Mother's name	varchar(100) not null

Field	Description	Type
GuardianNum	Guardian number. Unique identifier of a guardian/parent.	varchar(10) (PK)
GFEducA	Father's educational attainment	varchar(100)
GMEducA	Mother's educational attainment	varchar(100)
GFSchoolA	School attended by the father	varchar(100)
GMSchoolA	School attended by the mother	varchar(100)
GFOccupation	Occupation of father	varchar(100)
GMOccupation	Occupation of mother	varchar(100)
GFBusAdd	Father's business address	varchar(255)
GMBusAdd	Mother's business address	varchar(255)
GFTelNo	Father's telephone number	varchar(15)
GMTelNo	Mother's telephone number	varchar(15)
GHAddress	Home address of the guardian	varchar(255) not null
GContact	Guardian's home contact number	varchar(15)

The *tuition* table contains tuition fees.

Field	Description	Type
TuitionID	Grade/Year level where tuition fee is applicable. As well as the scholarship classification.	Enum ('PSJC', 'PSJACI', 'PSJACII', 'PSAC', 'PSGSI', 'GSII', 'GSIII', 'GSIV', 'GSV', 'GSVI', 'HIS', 'HSII', 'HSIII', 'HSIV', 'SA', or 'BM') (PK)
Amount	Amount of tuition fee	integer

The *subject* table contains information about a subject.

Field	Description	Type
SubCode	Subject ID. Unique identifier of a subject.	varchar(10) (PK)
SubName	Name of subject	varchar(20)
SubDescription	Description of subject	varchar(100)
LevelID	Grade/Year level to which the subject is being offered.	Enum('JC', 'JACI', 'JACII', 'AC', 'GI', 'GII', 'GIII', 'GIV', 'GV', 'GVI', 'HI', 'HII', 'HIII', or 'HIV')
SchoolYear	School year when the subject is being offered.	varchar(10)
Room	Room assignment	varchar(15)
SubUnits	Units credited for the subject	float

The *timeslot* table contains time slots available for subjects.

Field	Description	Type
TimeID	Time slot ID code	varchar(10) (PK)
LevelID	Specifies the grade/year level this specific timeslot is available for.	Enum('JC', 'JACI', 'JACII', 'AC', 'GI', 'GII', 'GIII', 'GIV', 'GV', 'GVI', 'HI', 'HII', 'HIII', or 'HIV')
TStart	Start period	varchar(5)
TEnd	End period	varchar(5)
TDay	Contains the day	varchar(10)

The *section* table contains the class schedule of sections.

Field	Description	Type
SecID	Section ID. Unique identifier of a section.	varchar(25) (PK)
SecName	Name assigned to a section	varchar(20) not null
LevelID	Grade/Year level where the section belongs.	Enum ('JC', 'JACI', 'JACII', 'AC', 'GI', 'GII', 'GIII', 'GIV', 'GV', 'GVI', 'HI', 'HII', 'HIII', or 'HIV')
SchedID	Schedule ID. Unique identifier of the class schedule of a section.	varchar(20) (FK: References *schedule table*)
FacultyNum	Faculty number. Unique identifier of a faculty member that handles a specific subject.	varchar(10) (FK: References *employee table*)
SchoolYear	School year the subject was offered	varchar(10)

The *schedule* table contains composite keys from 4 different tables: subject, faculty,

section, and timeslot.

Field	Description	Type
counter	Section ID. Unique identifier of a section.	auto-increment (PK)
sched_id	Schedule ID. Identifier of a section's schedule	varchar(20) (FK: References *section table*)
faculty	Faculty number. Unique identifier of a	varchar(10) (FK:

Field	Description	Type
	faculty member that handles a specific subject.	References *employee table*)
subject_id	Subject ID. Unique identifier of the subject a class will be taking.	varchar(10) (FK: References *subject table*)
SchoolYear	School year the subject was offered	varchar(10)

The *grade* table contains the grades of the students in their subjects.

Field	Description	Type
GradeID	Specific ID of each grade given	integer (PK)
StudentID	Student number. Unique identifier of a student.	varchar(10) (FK: References *student table*)
SubCode	Subject ID. Unique identifier of a subject.	varchar(10) (FK: References *section table*)
Quarter	Quarter the grade was given	Enum ('1st', '2nd', '3rd' or '4th')
SchoolYear	School year the subject was offered	varchar(10)
Grade	Grade to be given	integer
Comments	Short comment on the student's performance	varchar(255)

The *enrollment* table contains information about payments of tuition fee.

Field	Description	Type
EnrollID	Enrollment ID of each transaction	integer (PK)
StudentID	Student number. Unique identifier of a student.	varchar(10) (FK: References *student table*)
PaymentMode	Mode of payment that is preferred for the tuition fee. Either annual, semestral, monthly, or quarterly.	Enum ('A', 'S', 'M', or 'Q')
TuitionID	Grade/Year level where tuition fee is applicable. As well as the scholarship classification.	Enum ('PSJC', 'PSJACI', 'PSJACII', 'PSAC', 'PSGSI', 'GSII', 'GSIII', 'GSIV', 'GSV', 'GSVI', 'HIS', 'HSII', 'HSIII', 'HSIV', 'SA1','SA2','SA3' 'SB' or 'BM') (FK: References *tuition table*)
Payment	Amount Paid	integer
ORNum	Records the OR number upon payment	varchar(20)
PaymentDate	Date of payment	date(mm-dd-yyyy)

Paid_Flag	Identifies if the balance is paid or unpaid	Enum ('P' or 'NP')

The *discount* table contains the discounts or scholarship factors that are available. These are necessary for the assessment of fees.

Field	Description	Type
discount_type	Identifier of the types of discount available	varchar(5) (PK)
discount_factor	Discount factor that will be used for assessing tuition fees.	float

The *payment_scheme* table contains the interest that the fees will gain depending on the payment scheme they will choose.

Field	Description	Type
payment_scheme	Identifier of the payment schemes available.	varchar(1) (PK)
payment_factor	Factor that will be used in computing adjustments with Semestral, Quartery, and Monthly schemes	float

C. Context Diagram

Figure 8 shows the context diagram of E-nrollSYS. It has five external entities - the parent or guardian of the students, students, registration clerk, faculty members, cashier. Parents or guardians of the student will supply the student's information, while the system will provide the registration form and the status of the student. They would also be able to view the schedule and grades of their children. Students will be allowed to view their class schedule, grades, teacher's schedule, and comments on their performance. Cashier would supply the details needed for the assessment of fees like the discounts that would be given for scholars. They could also update the tuition fees of any year level and produce reports like Annual, Quarterly, Semestral, and Monthly Payments

Report. Registration clerks could create class schedules and sections, as well as add students to their respective sections. The school registrar will also be the system administrator because the only concern of the system administrator for E-nrollSYS is with the management of user accounts, and definitely, the registrar would know who should be given accounts and access to the records in the system. On the other hand, teachers could upload grades and comments of students. E-nrollSYS will supply the teaching load, class list, and grade sheet.
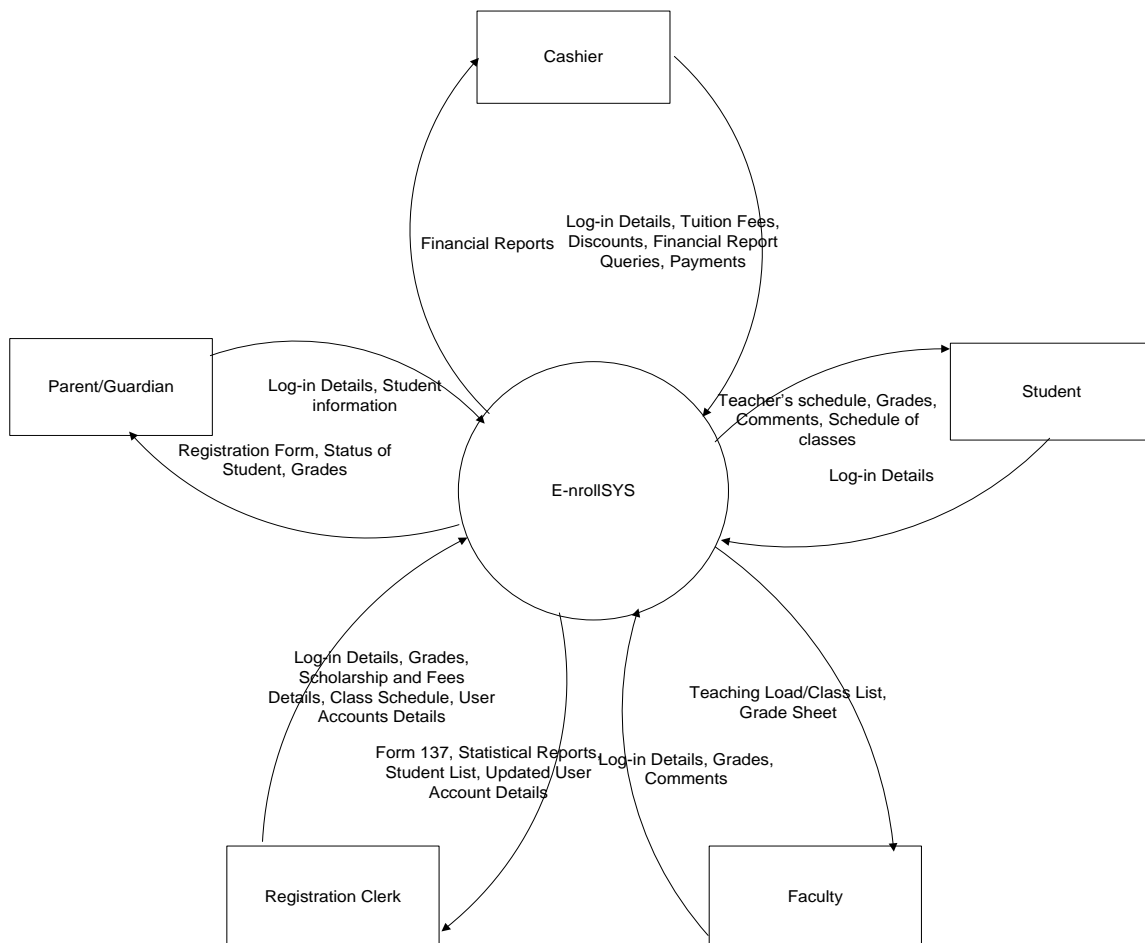

Figure 8. Context Diagram of E-nrollSYS

D. Data Flow Diagram

Figure 9 shows the top-level data-flow diagram of E-nrollSYS. It has 6 major processes namely log-in, enroll, manage class schedule, manage grades, generate reports, and manage user accounts.

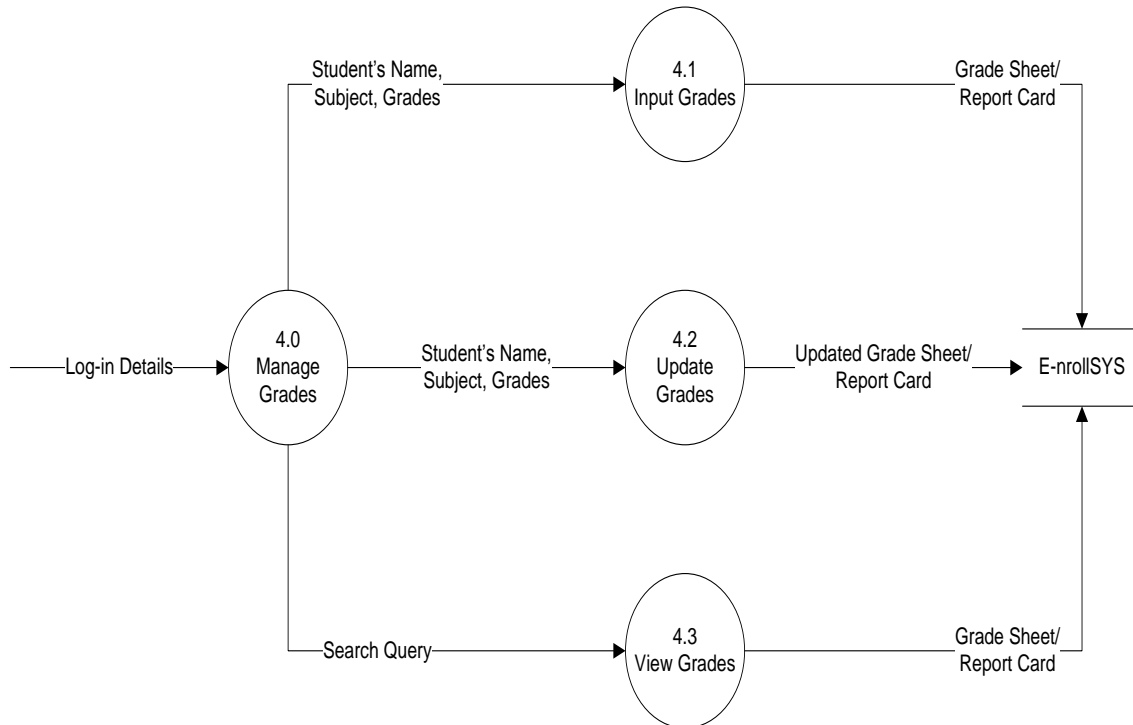

Figure 13. Sub-explosion of Manage Grades

Figure 14 shows the sub-explosion of Process 5 – Generate Reports. This module will be used by the registration clerk only. Inputs will come from the database and outputs will be relevant for their records. It has 8 subprocesses – generate form 137, generate promotion report, generate list of academic achievers, generate official enrollment list, generate statistical reports, generate siblings directory, generate student directory, and generate financial reports.
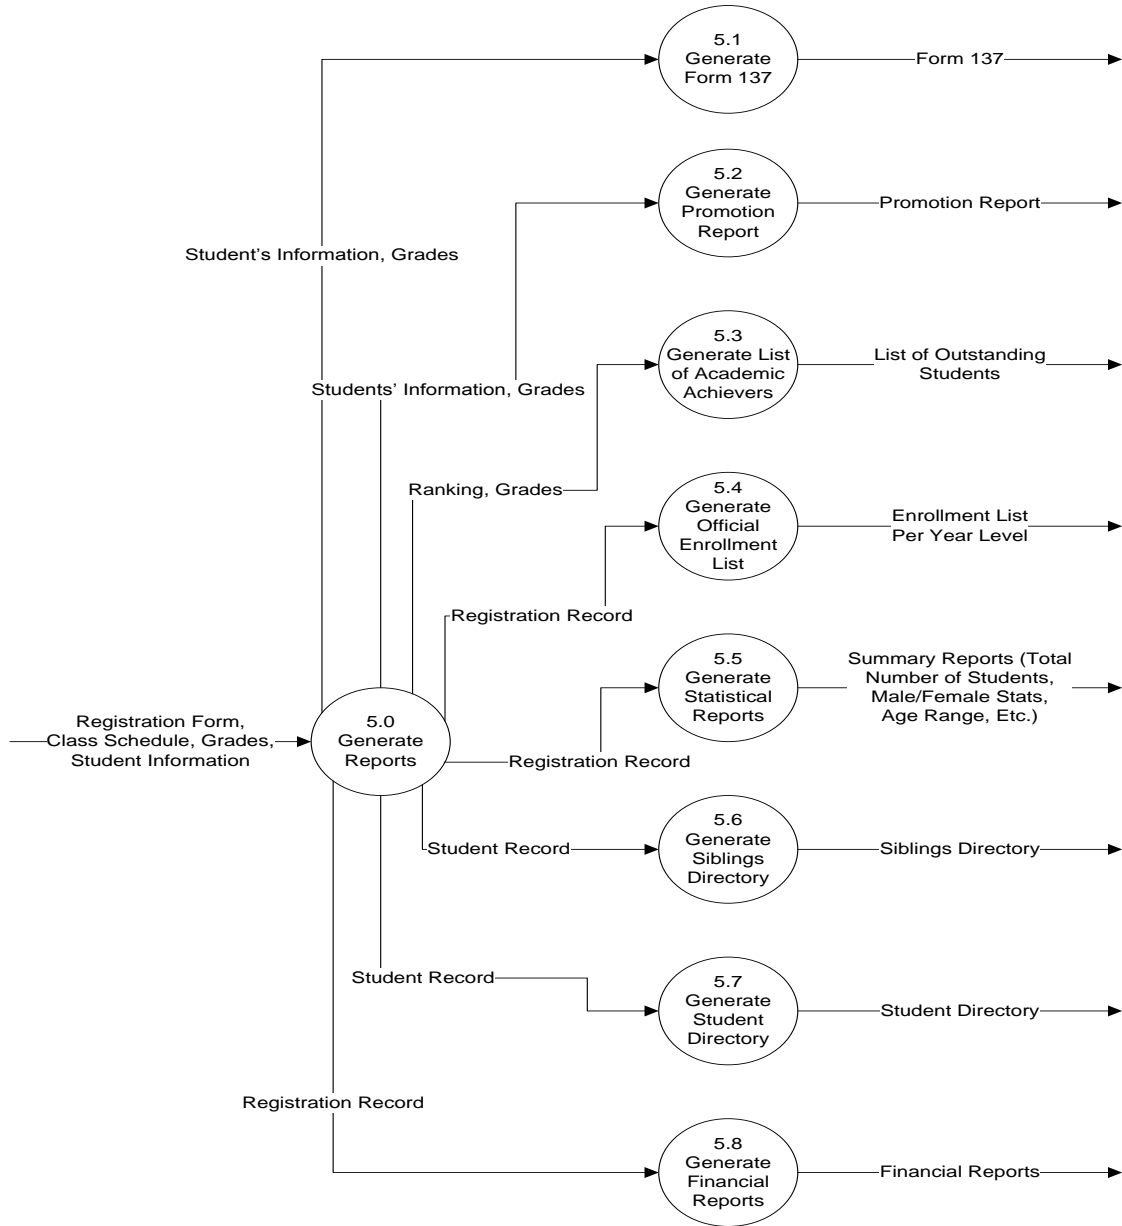

Figure 14. Sub-explosion of Generate Reports

Figure 15 shows the sub-explosion of Process 6 – Manage User Accounts. Only the system administrator will be the one using this module. It has 3 subprocesses – add user account, view user account details, and enable/disable account.
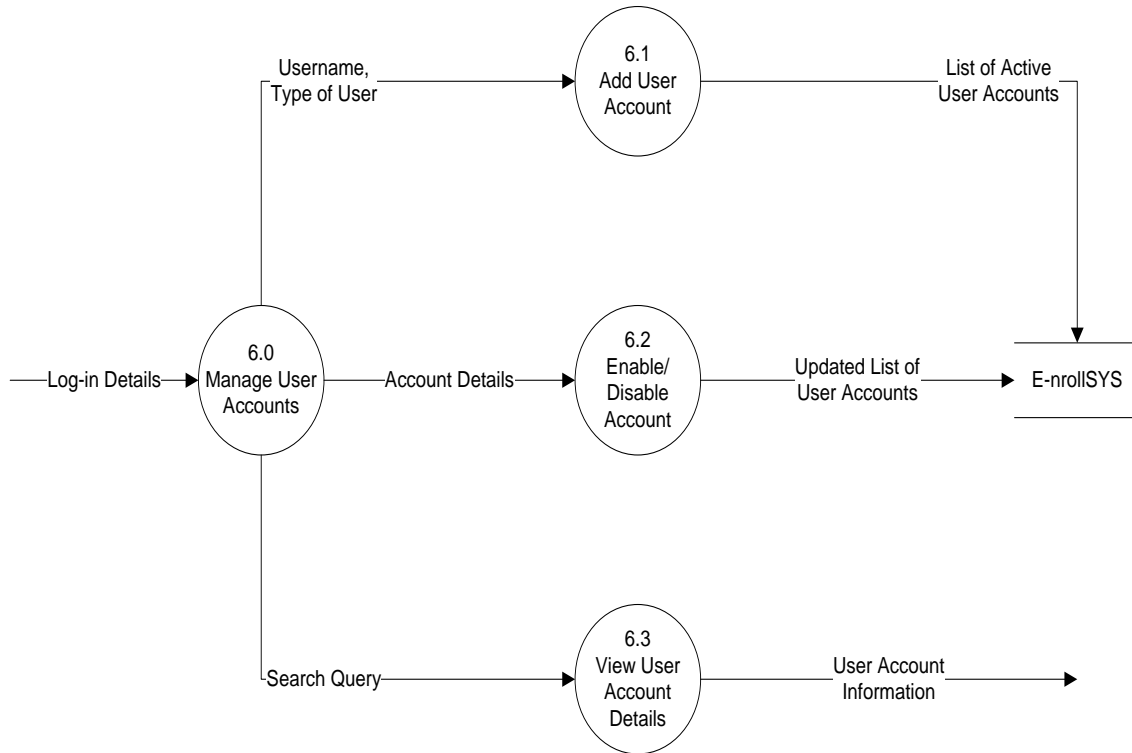

Figure 15. Sub-explosion of Manage User Accounts

E. Technical Architecture

The system will follow the client-server architecture. The database will be stored in the server and not on a separate computer. The client side is required to have an internet connection and a browser installed on the client computer to be able to use the system.

Hardware Requirements for the Server

- Pentium Processor 600 MHz minimum (1 GHz recommended)

- 256 MB of RAM recommended

- Up to 1.3 GB of Hard Disk space may be needed

- Screen Resolution 800x600 with 256 colors minimum (recommended 1024x768 in 16-bit high color)

Hardware Requirement for the User/Client

- PC with Pentium III or 500 MHz with 32-bit RAM or higher

- Screen Resolution 800x600 with 256 colors minimum (recommended 1024x768 in 16-bit high color)

V. RESULTS
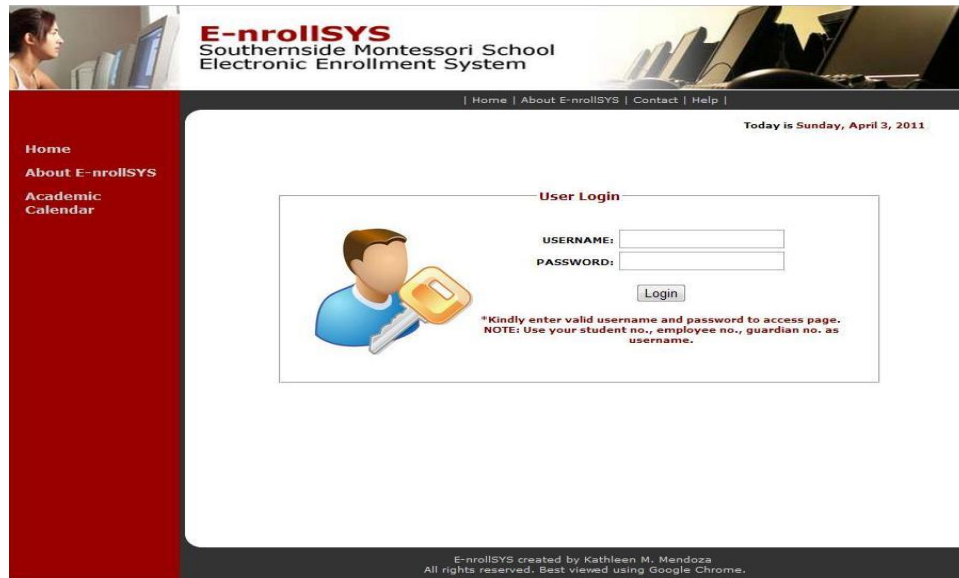

Figure 16. Log-in Screen

Figure 16 shows the login screen of the system. Upon viewing the website, the users are automatically prompted to login into the system.

Figure 21. Student's Screen

Figure 17 to 21 show the screens that will be shown upon logging in. Figure 17 shows the screen available to the registration clerks; Figure 18 shows the screen available to the cashier; Figure 19 shows the screen available to the faculty; Figure 20 shows the

screen available to the guardian/parent; and Figure 21 shows the screen available to the student. From this page they can access the different functions each type of user is allowed to do.

Figure 22. Search Student Records Screen

Figure 23. View Student Records Screen

Figure 22 and Figure 23 show the screens that will be shown when the View Student Record icon is clicked. Figure 22 shows the screen where the registration clerks could perform search functions by lastname, student number, grade/year level, or section and the system will output available records. Figure 23 shows the student's record when their name from the previous page is clicked.
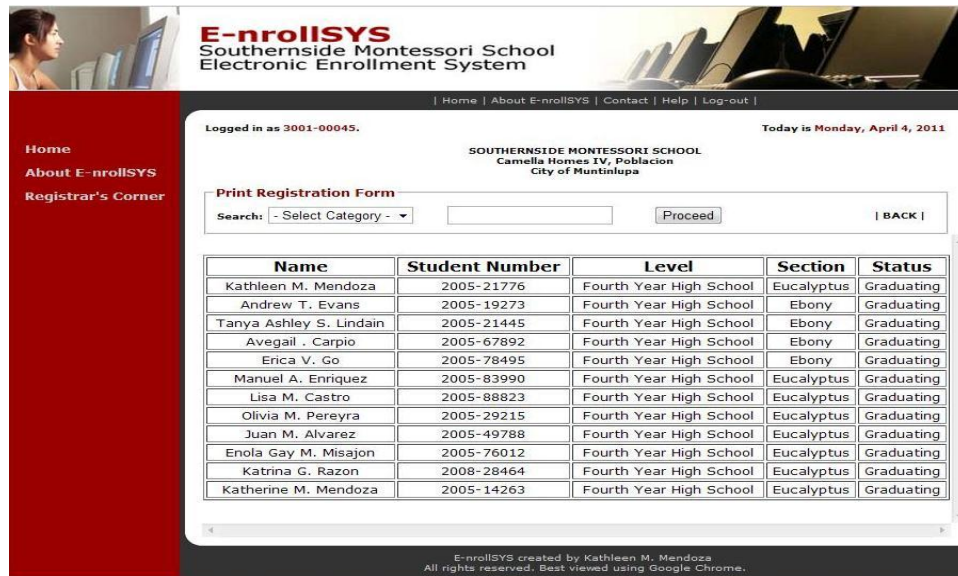

Figure 24. Print Registration Form Screen

Figure 24 shows the screen that will be shown when the Print Registration Form icon is clicked. This screen is where the registration clerks could perform search functions by lastname, student number, grade/year level, or section and the system will output available records with links that could download excel file format of the registration form shown in Figure 25. Figure 26 shows the sample excel registration file produced.
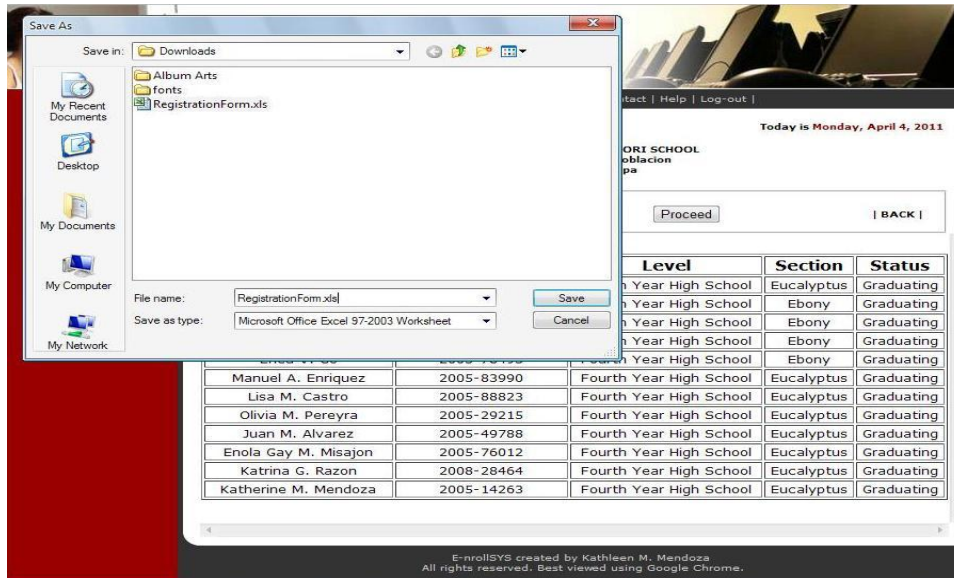

Figure 25. Download Registration Form Screen

Figure 26. Sample Registration Form File Produced

Figure 27. Student Directories Screen

Figure 27 shows the sub-page for viewing the different types of directories that are produced by the system like student directory by level, sibling directory, and student list which will be used for sectioning purposes.
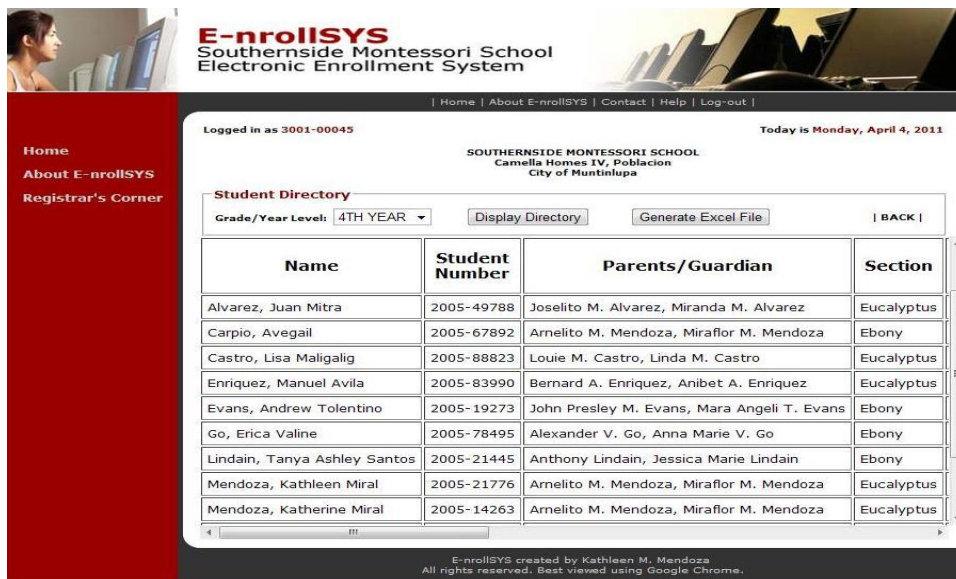

Figure 28. Student Directory Screen

Figure 29. Sample Student Directory File Produced

Figure 28 shows the screen that will be shown when the View Student Directory icon is clicked. This enables the registration clerk to produce a directory by year level and save it in an excel file. Figure 29 shows the sample student directory excel file produced by the system.

Figure 30. Sibling Directory Screen
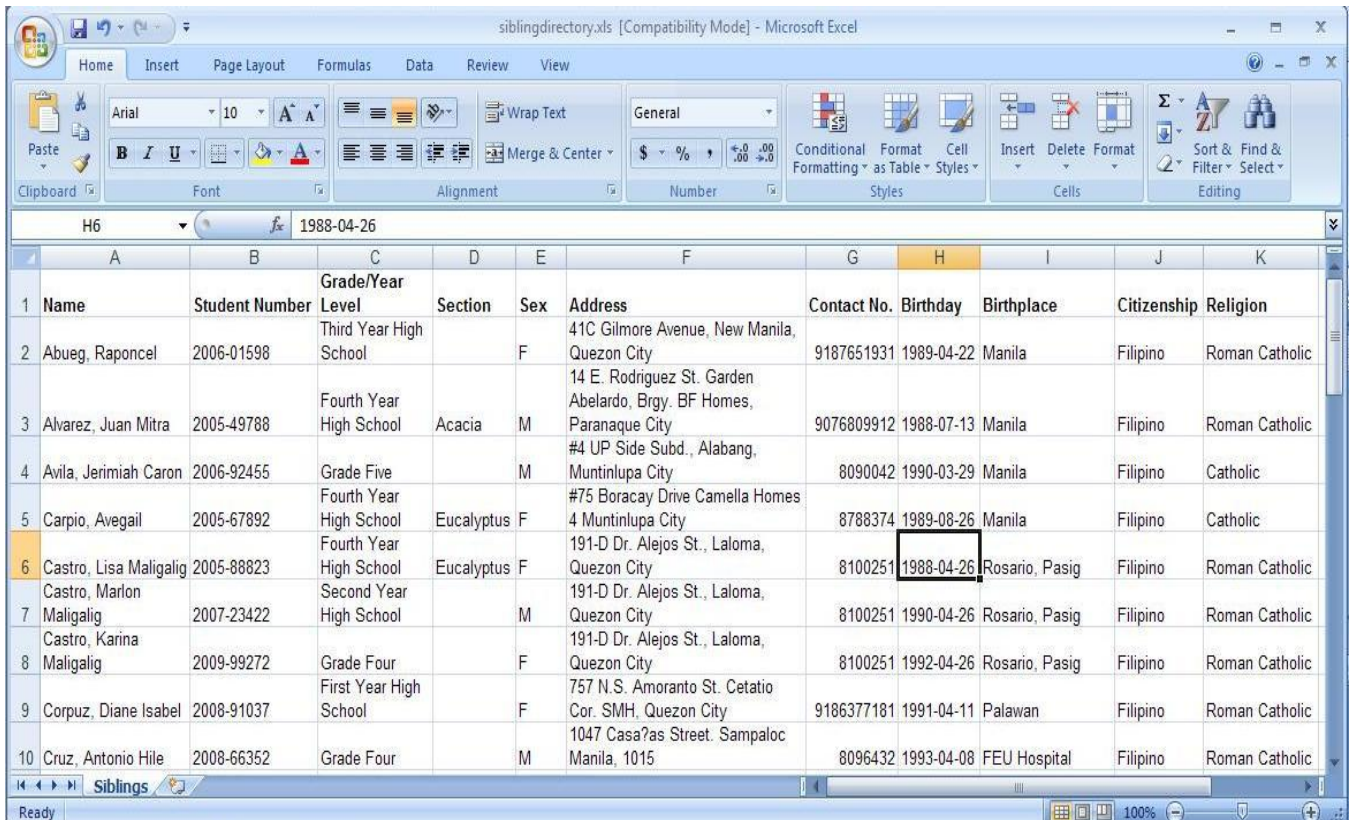

Figure 31. Sample Sibling Directory File Produced

Figure 30 shows the screen that will be shown when the View Sibling Directory icon is clicked. This enables the registration clerk to produce a directory of siblings studying in SMS and save it in an excel file like the image shown in Figure 31.
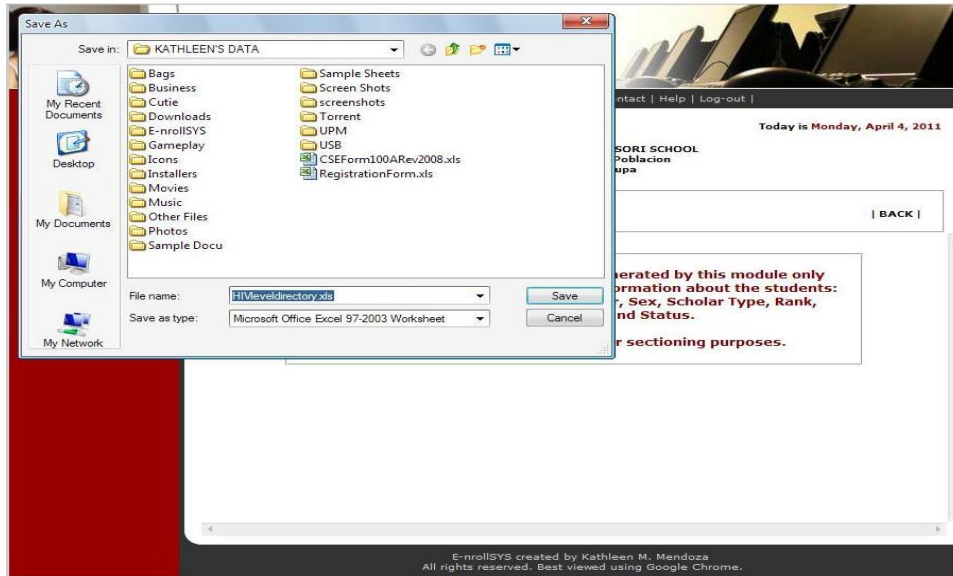

Figure 32. Generate Student List Screen

Figure 33. Sample Student List Excel File Produced

Figure 31 shows the screen that will be shown when the Generate Student List icon is clicked. This enables the registration clerk to generate the list of students per grade/year level and save it in an excel file as seen in Figure 33. This is forwarded to the faculties and used for sectioning purposes.

Figure 32. Manage Sections Screen

Figure 32 shows the sub-page for managing sections. The registration clerks can do: a) the creation of sections; b) creation of their class schedules; c) editing section details; d) view created schedules and the students on that section; and e) add and remove students from a section.
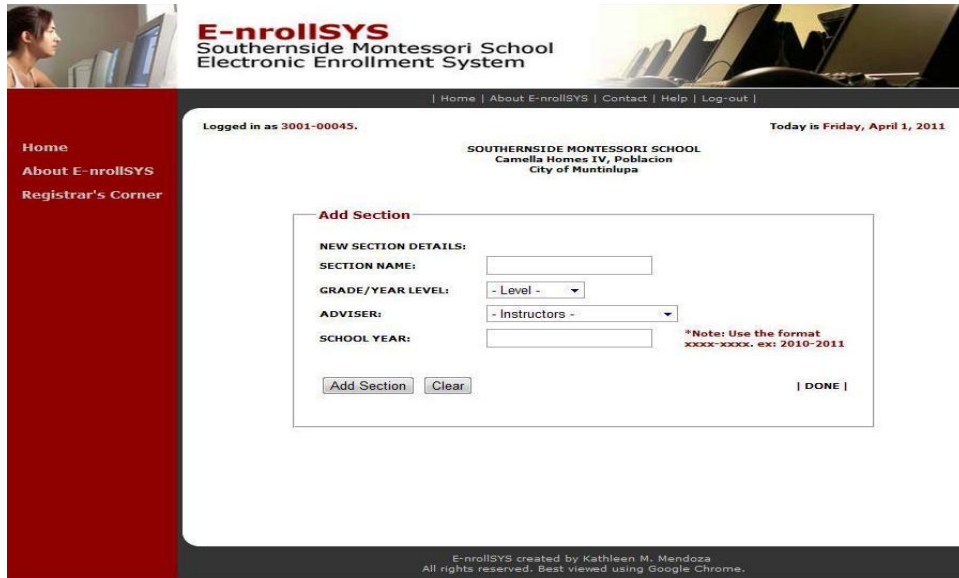

Figure 33. Create Section Screen
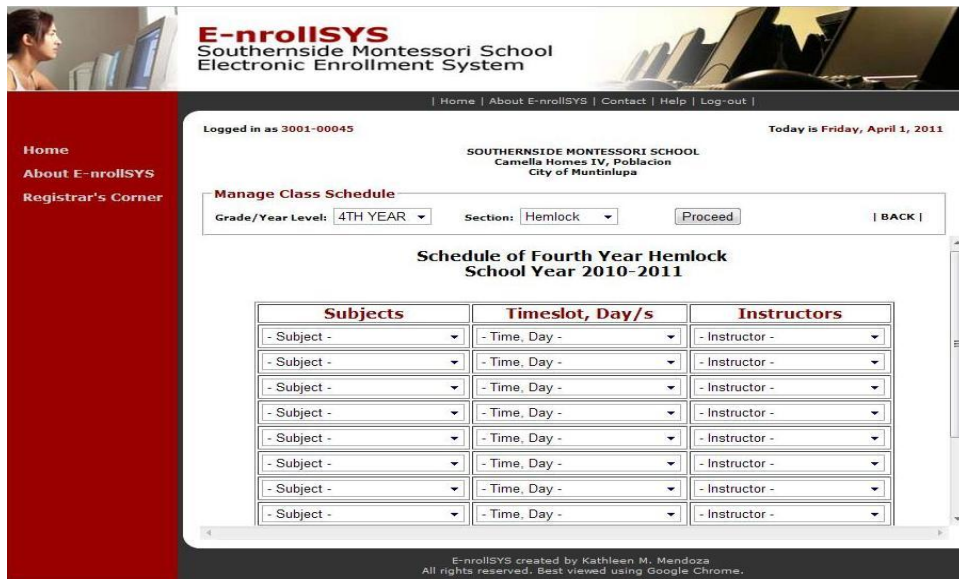

Figure 34. Create Schedule Screen

Figure 33 shows the screen where the registration clerk could create a new section

while Figure 34 shows where the class schedule of a section could be created.

Figure 35. Edit Section Details Screen

Figure 35 shows the screen where-in the registration clerks can edit section details, like section name and adviser, and delete a section.
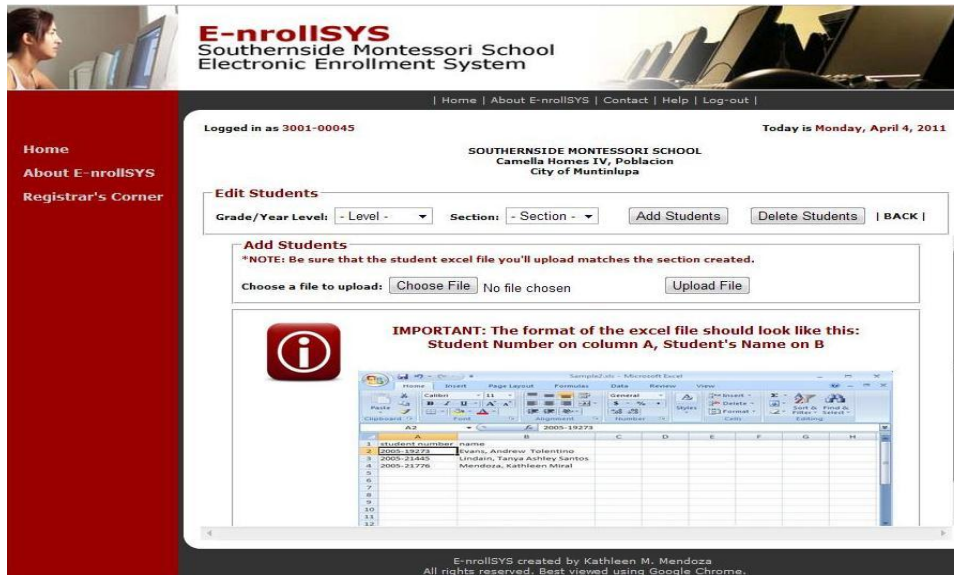

Figure 36. Add Students Screen
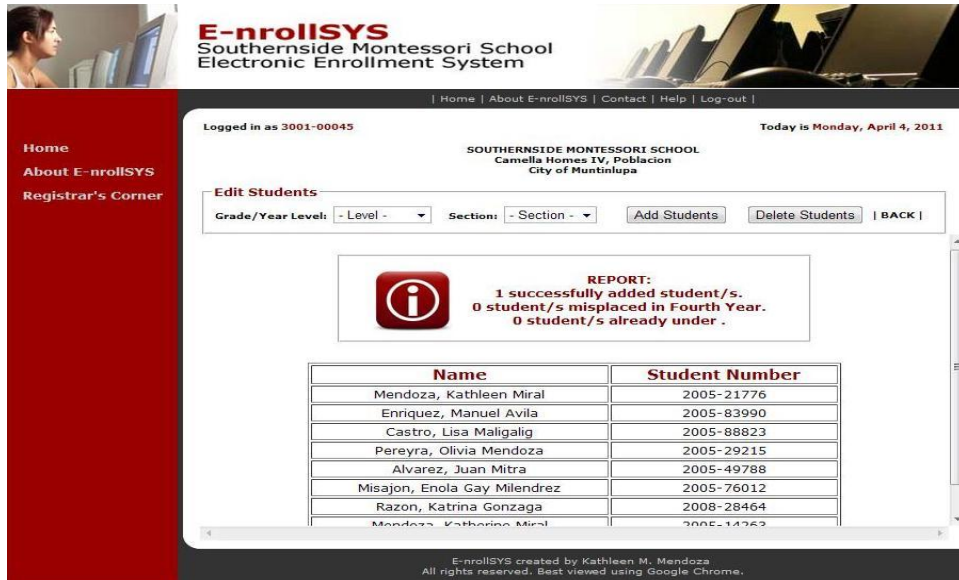

Figure 37. Add Students Screen

Figure 36 and Figure 37 shows where the registration clerks can add new students to a section by uploading an excel file containing student numbers.
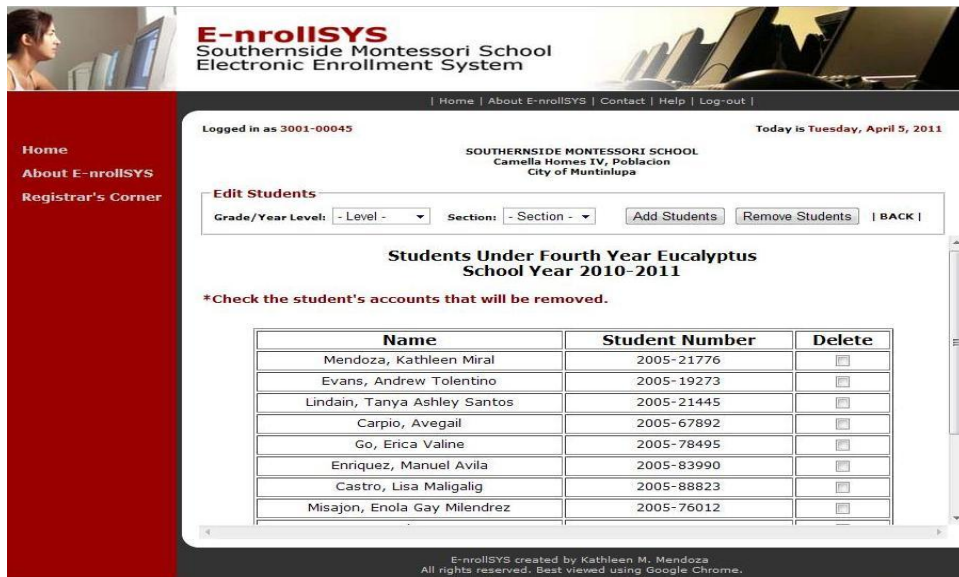

Figure 38. Remove Students Screen
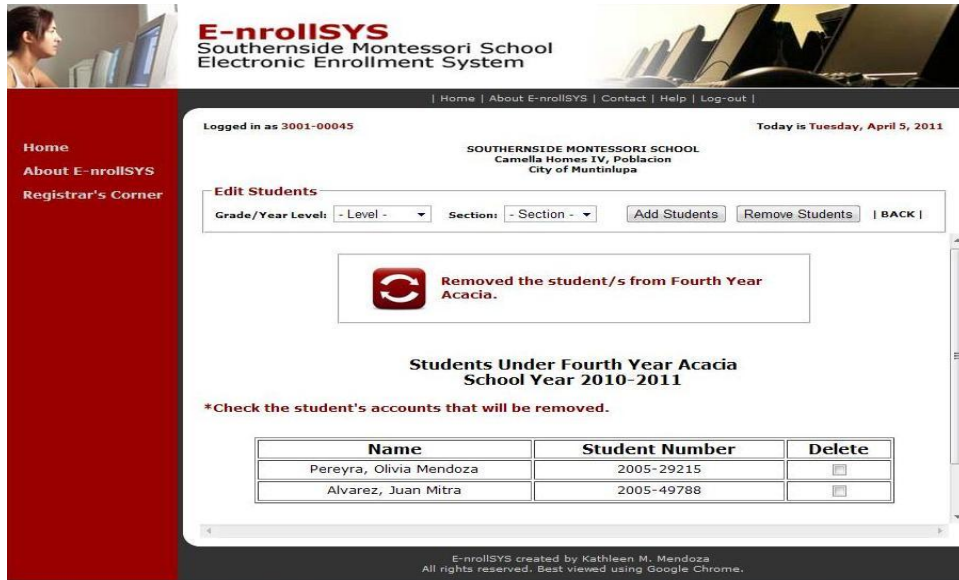

Figure 39. Remove Students Screen

Also the clerks can remove students from a section by checking the boxes across the students' names as in Figure 38 and Figure 39.
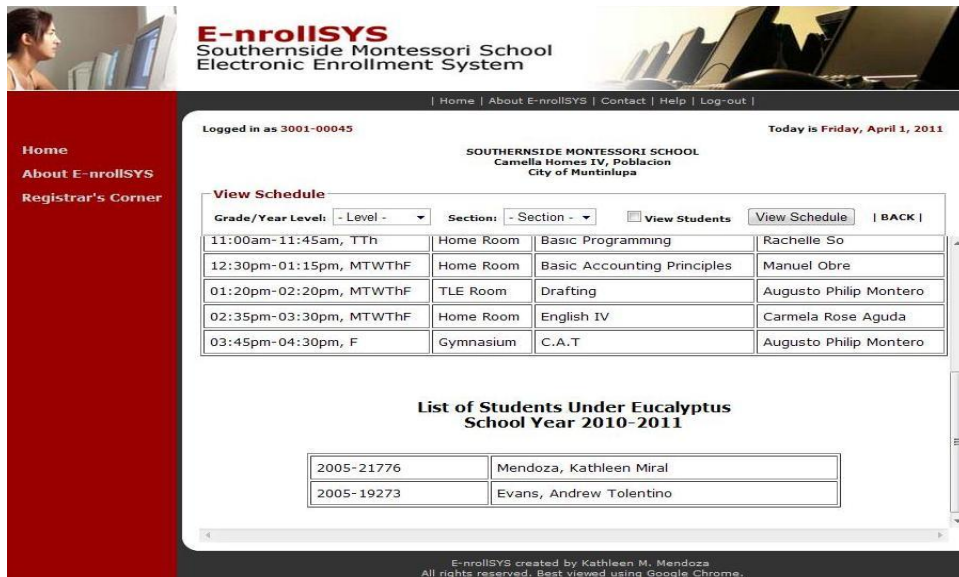

Figure 40. View Schedule and Students Screen

Figure 40 shows the screen that will be shown when the View Schedule and Students icon is clicked. Here clerks can view schedule and students who are members of a particular section.
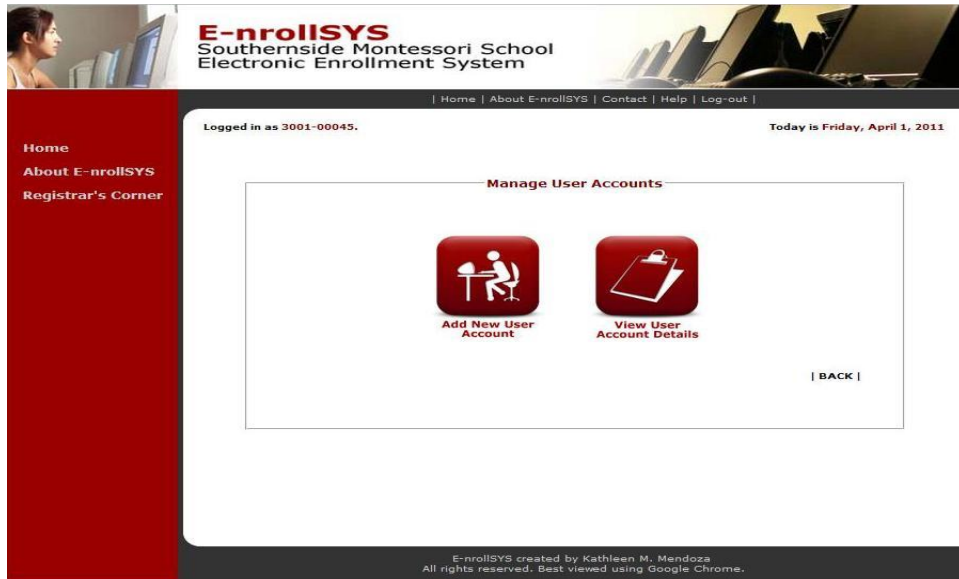

Figure 41. Manage User Accounts Screen

Figure 41 shows the sub-page where-in the registration clerks manage the user accounts of the system. From this page the registrar can do the following: a) add new user accounts and b) view their account details.
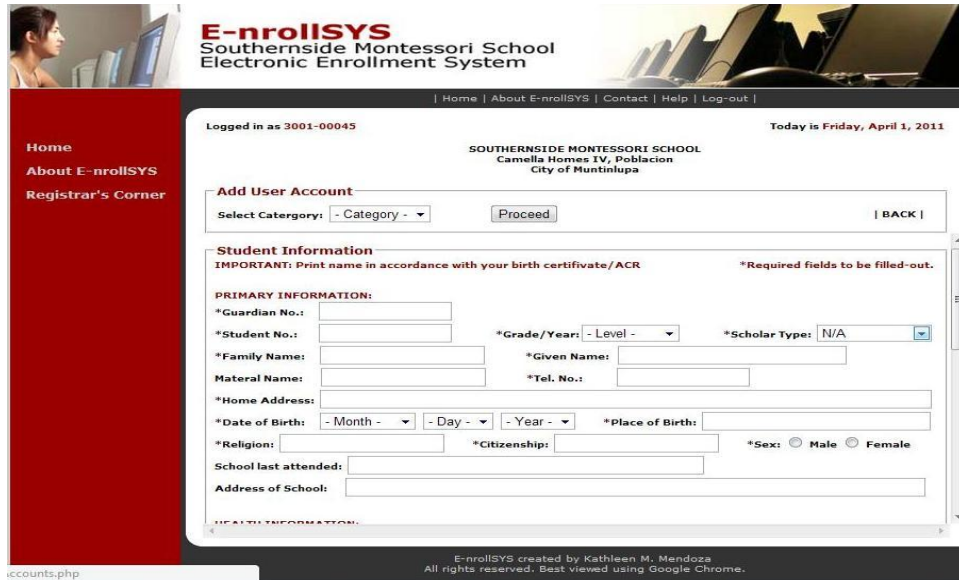

Figure 42. Add User Account Screen

Figure 42 shows the page where-in the registration clerks can add new user accounts to the system. A new user may be a student, guardian, or employee. A parent/guardian account should be created first before a student account can be added.

Figure 43. Update Ranking Screen-A

Figure 44. Update Ranking Screen-B

Figure 43 shows the screen that will be shown when the Update Student Ranking icon is clicked. Here the clerks can trigger the update and automatically view the top 10 achievers based on the overall ranking per grade/year level, Figure 44.

Figure 45. Update Enrollment Status Screen

Figure 45 shows the screen that will be shown when the Update Enrollment Status icon is clicked. Registration clerks can perform search functions and mark enrollment of students as approve, disapprove, or pending. Only pending accounts are shown after actions, such as approval or disapproval, were made.
Figure 46. Mark Non-Graduating Students Screen

Figure 46 shows the screen that will be shown when the Mark Non-Graduating Students icon is clicked. The registration clerks have the option of marking students as non-graduating depending on issues such as unpaid balances, failing grades, etc.
Figure 47. List Graduating Students Screen-A
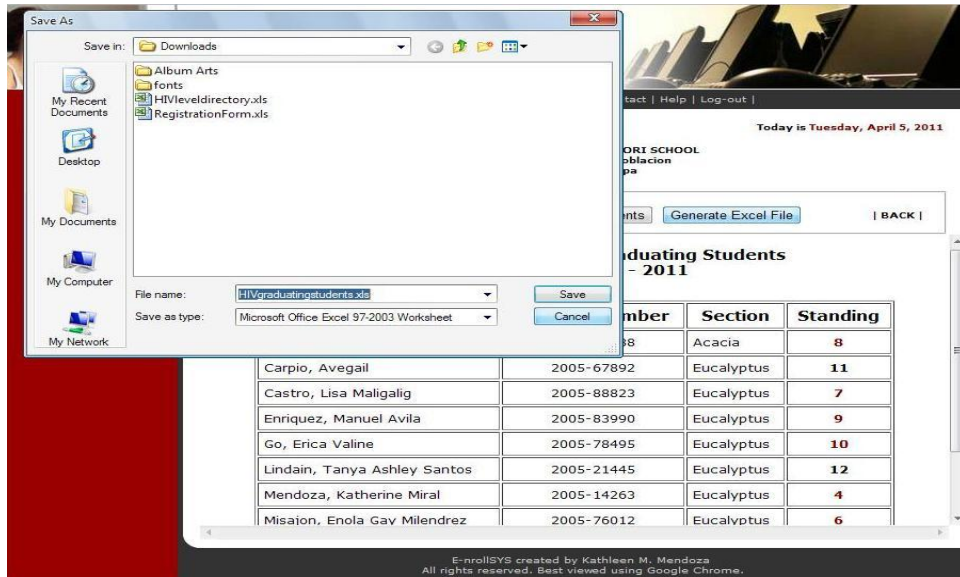

Figure 48. List Graduating Students Screen-B

Figure 47 shows the screen that will be shown when the List Graduating Students icon is clicked. It shows details like student number, section, and student ranking of graduating students. Excel file can be generated as in Figure 48.

- 74 -

Figure 49. View Academic Achievers by Level Screen

Figure 50. View Academic Achievers by Section Screen

Figure 49 and Figure 50 shows the screens that will be shown when the View Academic Achievers icon is clicked. It shows details like student number, section, and student ranking of the top 10 students per grade/year level.

Next, the cashier's different modules will be discussed. See Figure 18 for the Cashier's Corner.
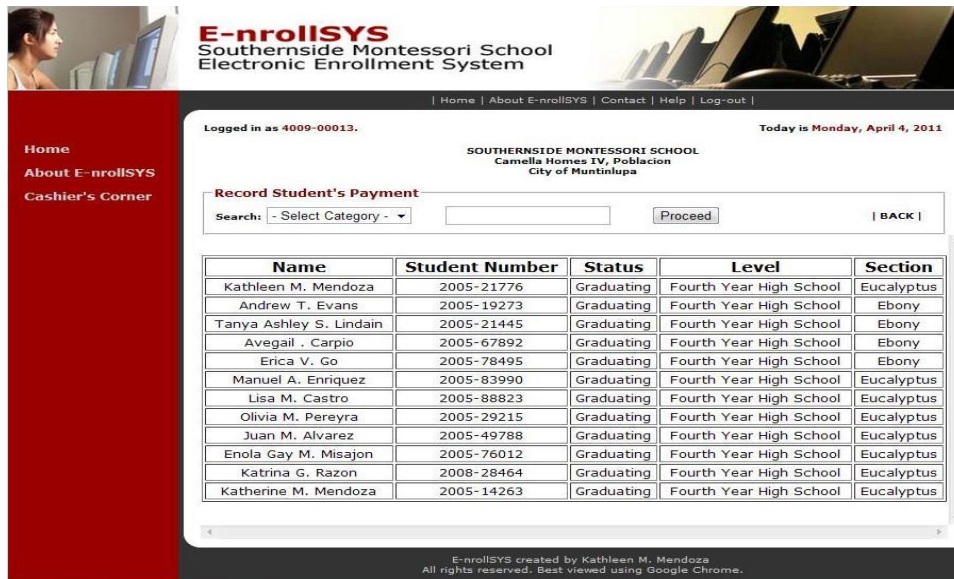

Figure 51. Record Payment Screen-A
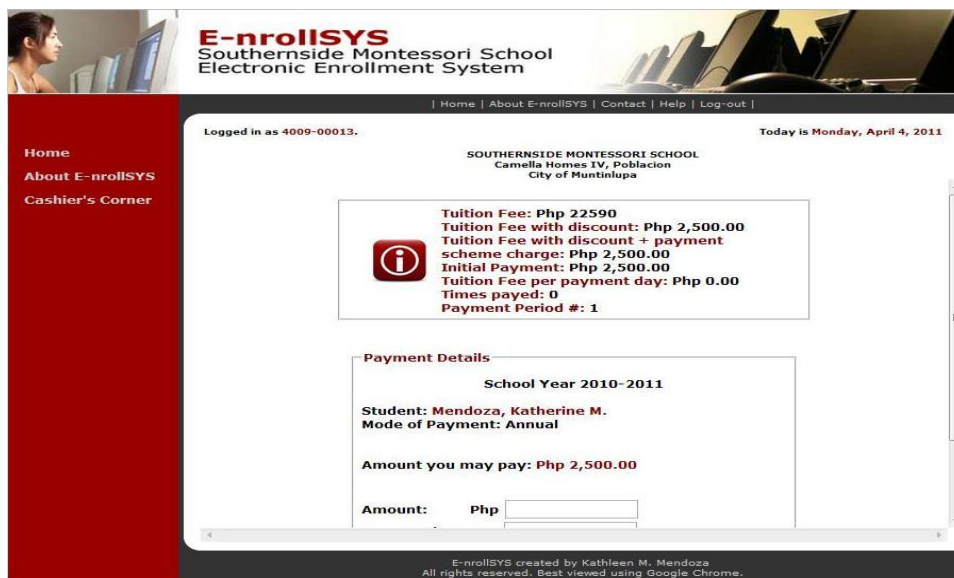

Figure 52. Record Payment Screen-B
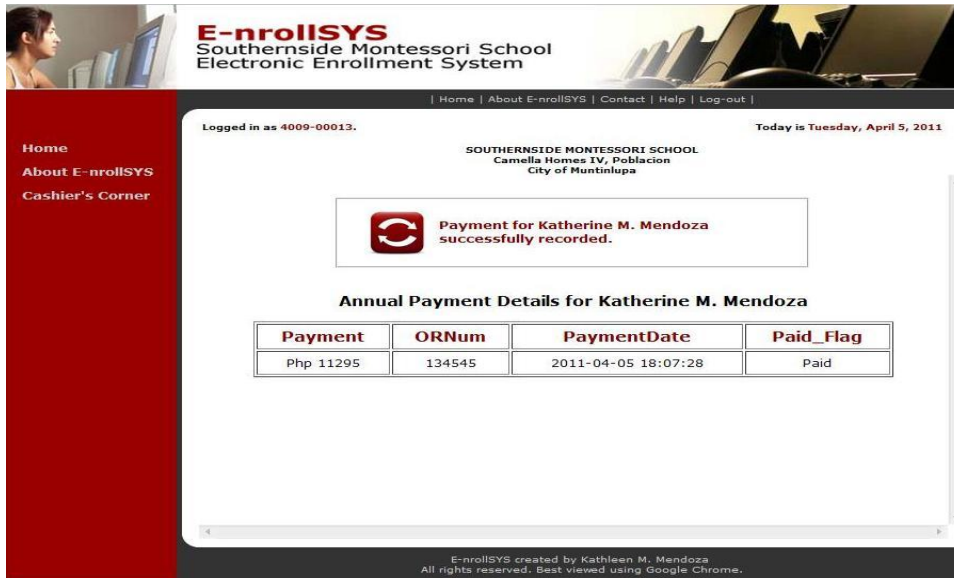

Figure 53 Record Payment Screen-C

Figure 51, 52, and 53 shows the screen that will be shown when the Record Payment icon is clicked. This shows the assessment based on the tuition fee list and scholarship/discount a student may receive, if applicable. It shows the amount expected on a particular payment period.

Figure 54. Update Fees Screen

Figure 54 shows the screen that will be shown when the Update Fees icon is clicked. Here the cashier can record adjustments on tuition fees per grade/year level.
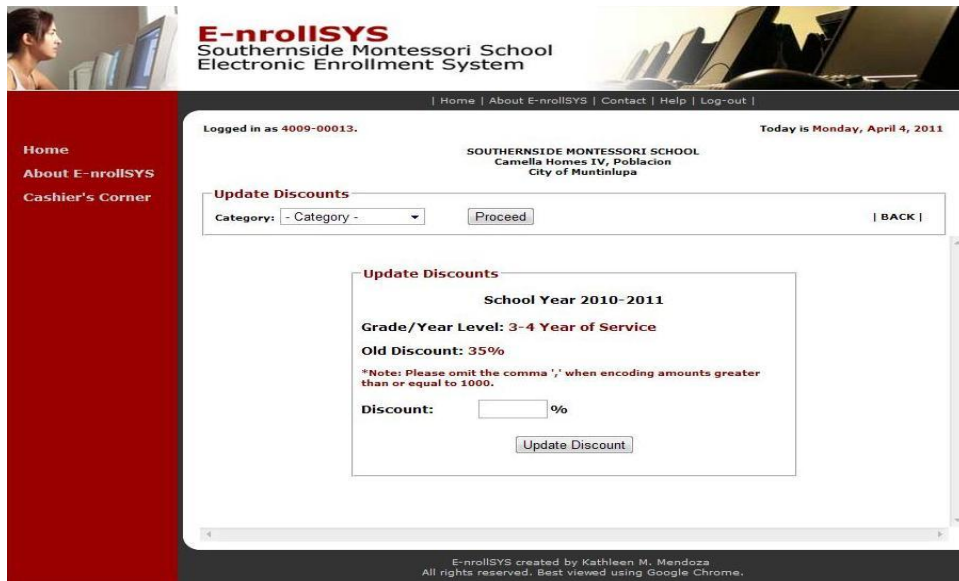

Figure 55. Update Dicounts Screen

Figure 55 shows the screen that will be shown when the Update Discounts icon is clicked. Here the cashier can record adjustments on discount rates given to different types of discounts like scholarships, employee discounts, and academic excellence discounts.

Figure 56. Monthly Payments Report Screen

Figure 57. Quarterly Payments Report Screen

Figure 56 to Figure 57 show the screen that will be shown when the Financial Reports icon is clicked. Figure 56 is the report of enrollees who availed the monthly payment scheme while Figure 57 a report on those who chose quarterly payment scheme.

Figure 58. Semestral Payments Report Screen

Figure 59. Annual Payments Report Screen

Figure 58 to Figure 59 show the screen that will be shown when the Financial Reports icon is clicked. Figure 58 is the report of enrollees who availed the semestral payment scheme while Figure 59 a report on those who chose annual payment scheme.

Next are the functionalities a faculty is allowed to do. See Figure 19 for the Faculty's Corner.
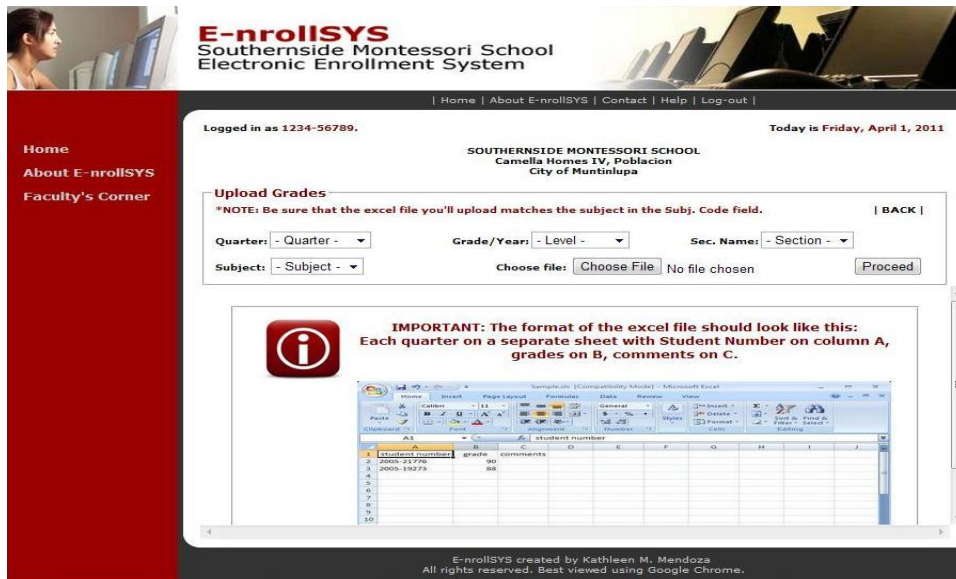

Figure 60. Upload Grades Screen
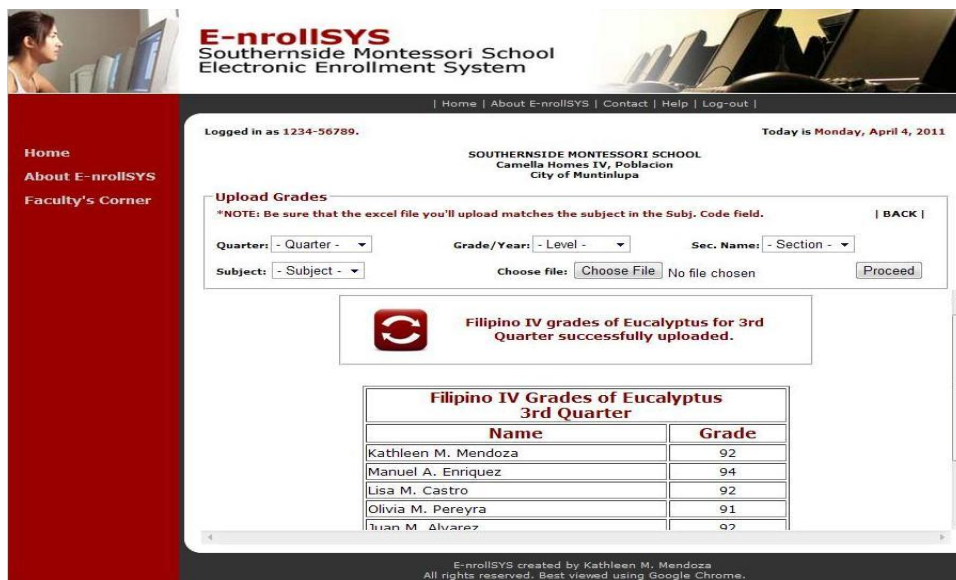

Figure 61. Upload Grades Screen

Figure 60 shows the screen that will be shown when the Upload Grades icon is clicked. Faculty members can upload the grade sheet of a section for a particular subject through an excel file. Figure 61 shows the summary of the upload grades module.

Figure 62. Compute GWA Screen

Figure 62 shows the screen that will be shown when the Compute GWA icon is clicked. This can be done every quarter. The General Weighted Average (GWA) of students will only be computed if their grades for the different subjects in a particular quarter are complete.
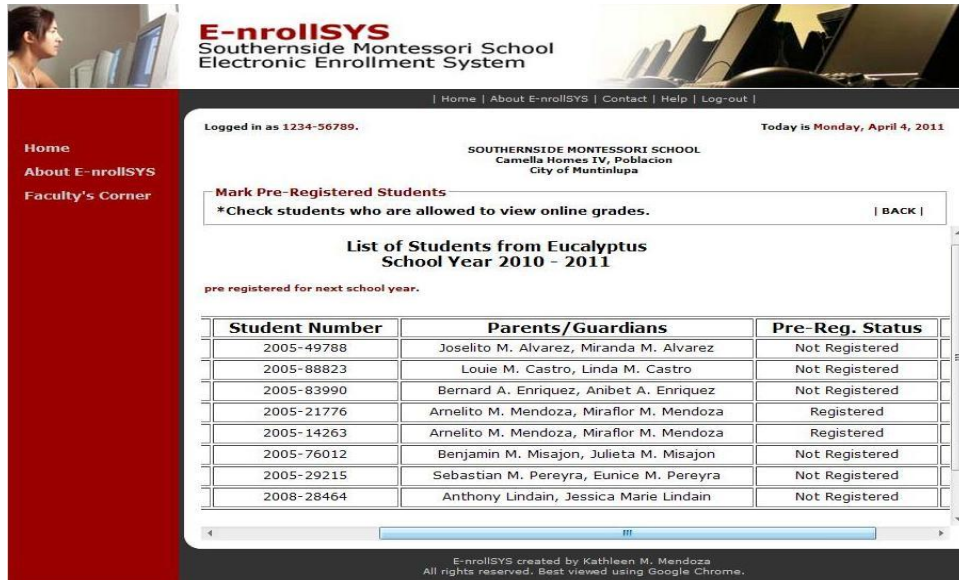

Figure 63. Mark Pre-Registered Students Screen

Figure 63 shows the screen that will be shown when the Mark Pre-Registered Students icon is clicked. This is done to assess how many students will possibly enroll in SMS the following school year.

Figure 64. View Student Ranking Screen-A

Figure 65. View Student Ranking Screen-B

Figure 64 and Figure 65 show the screens that will be shown when the View Ranking of Students icon is clicked. Teachers can view the overall grade/year level ranking of students or any particular section.

Figure 66. View Schedule Screen

Figure 66 shows the screen that will be shown when the View Schedule icon is clicked. It shows the schedule of the instructor containing the time, room, section, and subject the instructor is teaching.

Parents can do the following: a) update their information as well as their children's; b) view the enrollment status of their children; c) view student's grades and remarks, both by quarter and overall.

Figure 67. Update Guardian's Information Screen

Figure 68. Update Student's Information Screen

Figure 67 and 68 shows the screens when the Update Guardian's and Student's icons are clicked. These pages enable the guardian to change important information such as address and contact number on the records of their children.
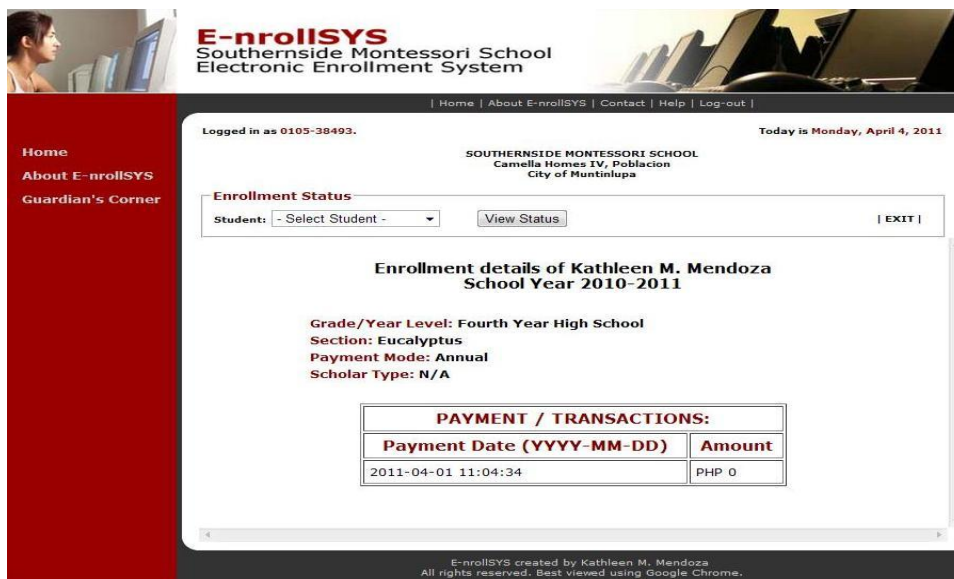

Figure 69. View Status of Enrollment Screen

Figure 69 shows the screen that will be shown when the View Enrollment Status icon is clicked. It shows details such as grade/year level, section, payment mode, as well as breakdown of payments made.

Figure 70. View Grades and Remarks Screen (Per Quarter)

Figure 71. View Grades and Remarks Screen (All Quarters)

Figure 70 and Figure 71 shows the screen that will be shown when the View Grades and Comments icon is clicked. It shows the grades and remarks of teachers on their children depending on the quarter they choose on Figure 70 and all the available grades on Figure 71.
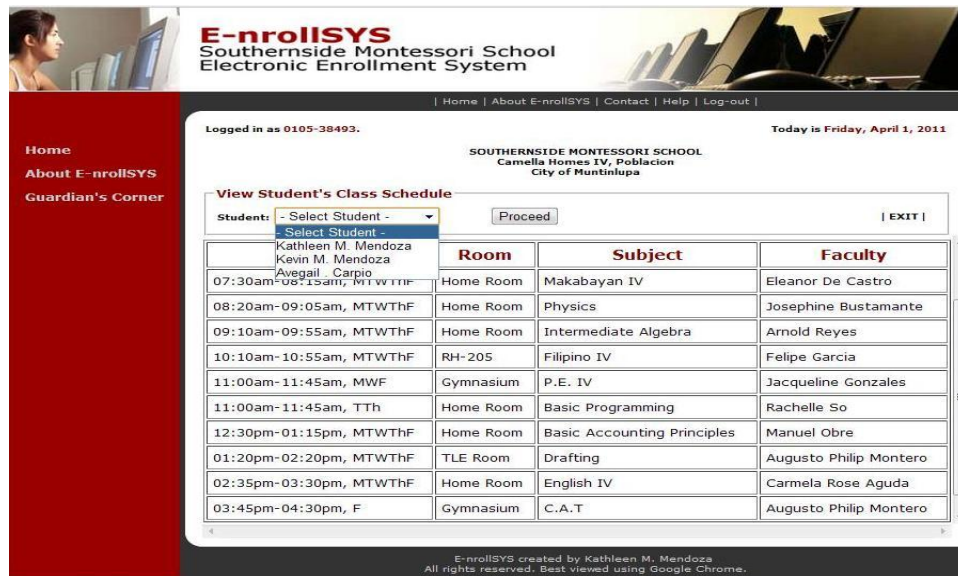

Figure 72. View Class Schedule Screen

Figure 72 shows the screen that will be shown when the View Class Schedule icon is clicked. It shows the class schedule of their children. It contains details such as days and time, subject, room assignment, and faculty in charge.

Below are the things a student can do with his/her account: a) view grades and remarks; b) view class schedule; c) view schedule of instructors.

Figure 73. View Grades and Remarks Screen

Figure 73 shows the screen that will be shown when the View Grades and Remarks icon is clicked. It shows the grades of the students on their subjects as well as their GWA depending on the quarter they choose.

Figure 74. View Class Schedule Screen

Figure 74 shows the screen that will be shown when the View Schedule icon is clicked. It shows their class schedule for the whole school year. It contains details such as days and time, subject, room assignment, and faculty in charge.

Figure 75. View Instructor's Schedule Screen

Figure 75 shows the screen that will be shown when the View Instructor's Schedule icon is clicked. It shows the schedule of their instructors for the whole school year. It contains details such as days and time, subject, room assignment, and faculty in charge. This can be used as basis for consultation hours with the instructor.

The Figures 76 to 78 are the common pages of each type of user account. These are the change password, view profile, and update essential information screens.
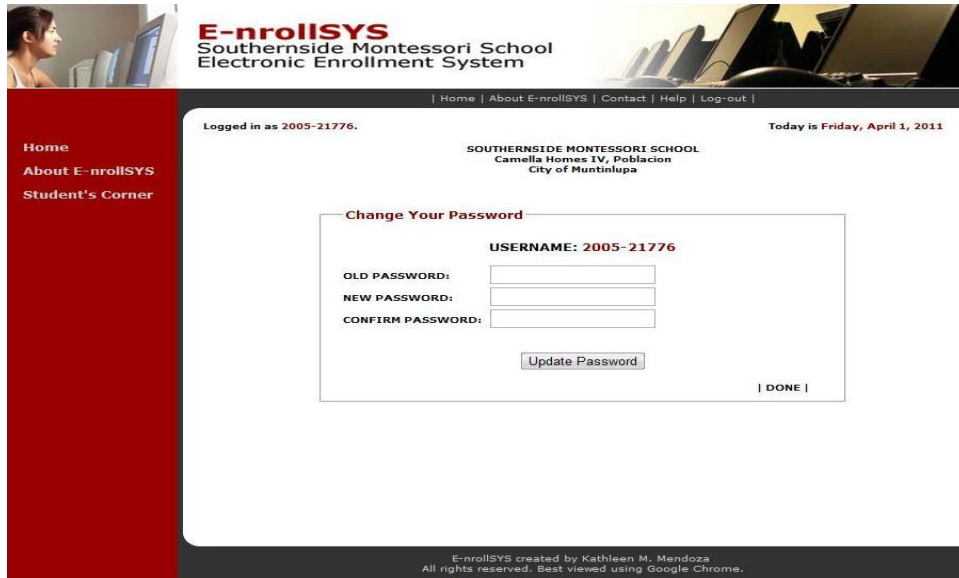

Figure 76. Change Password Screen

Figure 76 shows the screen that will be shown when the Change Password icon is clicked. Each user of the system may opt to change their password. Temporary passwords are given once accounts are made.
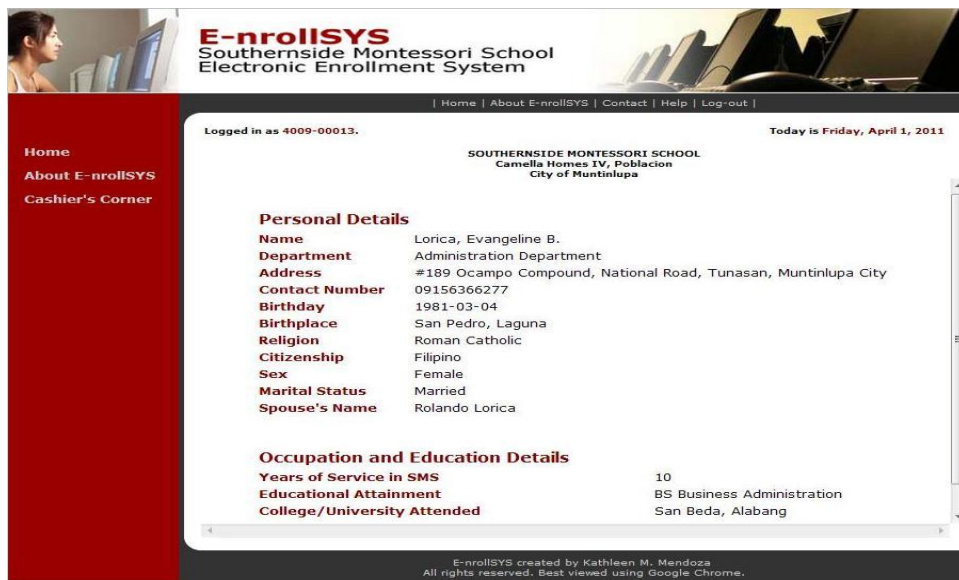

Figure 77. View Profile Screen

Figure 77 shows the screen that will be shown when the View Profile icon is clicked. Each user of the system may view their complete profile which consist of their personal details and other additional information that the system needs.

Figure 78. Update Essential Information Screen

Figure 78 shows the screen that will be shown when the Update Essential Information icon is clicked. Each user of the system may update or edit details found in their complete profile, except for student accounts. Changing student information if needed is the guardian's/parent's task.

VI. DISCUSSION

E-nrollSYS is an enrollment system and student information system combined. It takes care of enrollment processes as well as retrieval and storage of essential data about students.

By gathering sufficient information through research, interview, and company visitation, the proponent was able to develop a system that would help Southernside Montessori School for their enrollment process as well as their student records. The system also helped SMS from the risks and errors that are involved with the institution's existing manual enrollment system. The development of an online enrollment system requires an understanding and an analysis of the existing system; the problems, requirements, and specifications that the institution laid out. It also required ample amount of preparation that involves conducting interviews and company visits, obtaining necessary information through research, and coming up with a resolution for the requirements of the company.

The proposed system includes the transactions done in the Cashier's Office and the Registrar's Office, namely: payment and assessment of fees, class scheduling, generating directories and class lists, and selection of subject/schedule of the students. Also included in the system are Faculty Department transactions like: uploading grades

and comments, computing the GWA of students, ranking the students, and producing achievers list.

The registration clerks act as system administrator because they are the ones creating accounts in the system. Newly admitted students together with their guardians will be given new accounts with different access levels. After the issuance of username and temporary password they could access the online portal right away. Usernames of users are permanent because it corresponds to their employee number, guardian number and student number.

When creating user accounts, parent's/guardian's account is more important than the student's. Without this, creation of student's account will not be allowed. Registration clerks will be the ones encoding primary information about the users like name, address, contact number, birthday, etc. Other details will be supplied by the users themselves. In a student's case, their guardian/parent will be the one responsible for updating information.

E-nrollSYS offers search boxes to pages where searching records among a large number of stored records are needed. The main search box can filter searches in 4 categories, student number, last name, grade/year level, and section. Another filter for the user account details is available. This time, categories are the different types of users and last name is accepted in the search box. This will aid the user in searching for students and users records.

The system accepts excel file formats for transactions that require files for processing like adding students into a section and uploading grades and comments. Excel files are also produced whenever an output is needed like student directories, sibling directories, registration forms, etc. Excel file is chosen because it is a very familiar format for the users. They wouldn't need any other applications or reader because once MS Office, Open Office, or the likes is installed they could open the file easily.

Computation of GWA and ranking the students are also available in this system. Grades that are uploaded (in an excel file for the whole section) should be the final grade for each subject and GWA is only computed when the students have grades for all the subjects being taken. GWA per quarter is computed as: a) get the product of the subject grade multiplied by the number of units for all subjects of the students (varying number of subjects depending on the grade/year level). b) Get the total of the products and divide it with the total number of units. Final grade is the sum of the average of all the subjects from 1st to 4th quarter divided by the total number of subjects. [4]

Those who are considered full scholar are students with the following scholarship types: a) scholar B1; b) 4th child enrolled in SMS; c) beneficiary of an employee who has 7-9 years of service; and d) beneficiary of employee who served for at least 10 years in SMS. Although no payment is required, the cashier should record the payment by entering 0 in the record payment module as to record the transaction/enrollment made.

Ranking may be viewed by section or by grade/year level. The rank depends on the GWA computed and stored at a given time by triggering the processes from the teacher and registrar's pages which is why, it is necessary to check and update every quarter to make sure that the most recent standing and GWA is reflected in the database.

VII. CONCLUSION

In conclusion, E-nrollSYS reduces the problems of the current manual enrollment and student record keeping system of Southernside Montessori School. It makes retrieval of information easier compared with the old student records that take time to sort. It serves as a repository of important information like payment transactions, student records, grades, etc. This reduces the risk of data redundancy or inconsistent records.

Parents are allowed to view their child's academic performance, class schedule, and update essential information on their child's student record without going to the school personally. Registration clerks are the super users of the system because much of the activities in this system are being done by them. Creating class schedules and assigning advisers, as well as including students to that section are done faster giving them more extra time to attend to other tasks. Generating student directories for the institution can be done with just a few clicks of the mouse. The faculty's load of computing for a number of grades will be reduced. Cashiers can record transactions and generate financial reports right away.

The advantages of having automated enrollment system and student information database clearly benefit its users. E-nrollSYS provides fast and accurate answer to any student record related queries.

VIII. RECOMMENDATION

The system may be expanded by working on the connection with the receipt printer that the school currently uses. That way, they will completely deviate with the old system and use just one system which is E-nrollSYS. It will be more convenient for the registration clerks and cashiers.

A module that updates the subject list offered per grade/year level is also an additional expansion that should be implemented because as of the moment, a static set of subjects available is the basis of this system. This will allow the system to accommodate changes in the curriculum in the future.

Printing a certified true copy of grades of the students may also be done in the future since the system keeps the grades of the students. This will shorten the processing time of the said transaction.

XI. ACKNOWLEDGEMENT

Whoa so this is the thank you's part. ☺ I've never ever felt so exhausted in my whole life! Haha. This whole thesis thing drained everything of me. Oooops, no more rants. Finally this is it! I've never been much happier writing this. I've waited for this far too long.

First of all to Ms. Avegail Carpio, my adviser, my mentor. Thank you for guiding me in making this thesis as best as it can be. Finally ma'am, natapos din. ☺

Next, to my super duper wonderful friends who helped me. To my worst, JJ, Marvin, and super bear, Erika. ☺ Thank you for the impromptu overnights when I needed somebody to keep me awake, brainstorm with me, and every thing else. You guys are awesome!

To everyone who has encouraged me, to finish this thesis. Finally it's here! Yeah! This is for all of you! ☺

To ate Daal, who's my idol. ☺ We made it! Finally! No more sleepless nights coding or debugging. We can finally rest. A much deserved one. Haha. Twitter's gonna miss #hatethesis. ☺

To my high school barkada, girls this is for you. I made it! Haha. We can finally go out soon. No more thesis blues and excuses to not come with you.

To Denver, thanks for all the support. You know you've done so much too for this thesis. Even though I've been so pessimistic you've always believed that I can finish this. And yes, I did! Horaaaay! Let's celebrate. Haha.

Tita Rachelle and Tito Walter, 2 of the people I really look up to. Thanks for the encouragements, support, everything. I hope you're here for my graduation.

To my family, mama, papa, Kevin. This is it! I can finally say that I am graduating. Sorry for the disappointments, but I try to be the best daughter/sister. Yipeeeeeeeey! For all your love and support, this is my gift to you.

And most especially to the almighty God, this wouldn't be possible without you. Thank you Lord for all the blessings you showered me. I wouldn't be here if not for you. I believe this is the right time. ☺
