## **Customer Support Services Content Management System for Government Agencies**

A special problem in partial fulfilment  
of the requirements for the degree of  
**Bachelor of Science in Computer Science**

Submitted by:

Harold Brian S. del Castillo  
June 2015

Permission is given for the following people to have access to this SP:

Available to the general public	Yes
Available only after consultation with author/SP adviser	No
Available only to those bound by confidentiality agreement	No

## ACCEPTANCE SHEET

The Special Problem entitled "Customer Support Services Content Management System for Government Agencies" prepared and submitted by Harold Brian S. del Castillo in partial fulfilment of the requirements for the degree of Bachelor of Science in Computer Science has been examined and is recommended for acceptance.

## **Abstract**

The special project is a web-based application for lodging of requests, queries, complaints, issues, concerns, suggestions/opinions, tips, and etc., well as for tracking the status of redresses/comments from anywhere which utilized various systems as its foundation. The use of web-based application technology in government institutions has many benefits. However, in the Philippines, most of the government websites do not have facilities to enable online submission of questions, feedback, complaints, or suggestions. This is one major reason why many Filipinos are not happy with the services provided by the government. Thus it is high time that an “issue tracking system” or “customer support system” be established. This special project seeks to embark on the enhancement of government websites to make it more professional, dynamic and interactive, and user-centric to encourage citizen participation. The application will have four user types: the general public are the common masses, the head administrator, the department admin, and the department user. Moreover, it caters to four major fields of information and messages: petitioner, category, subject, and area.

## **I. Introduction**

### **A. Background of the Study**

Nowadays, government institutions are using web-based application technology to simplify resources and manage their data. They are using web-based application technology to increase efficiency, accuracy and productivity in the administrative tasks within any department in a variety of applications such as customer service support services, products, and assets. Administrative tasks like inventory maintenance, feedback, customer service support services, and document control, can be enhanced by applying web-based application technology.

Through this, administrators can easily and accurately record customer feedback and it also helps in maintaining accurate information about the records, time tables, and much more. It guarantees accuracy, saves time and also eliminates a lot of labour. Once the information gets uploaded into the database, it will be very easy for the administrators to identify nature of the feedback. Providing instant results, it helps the administrators to identify and communicate with customer. This kind of constant monitoring encourages the customers from using the system.

The use of web-based application technology in government institutions has many benefits. Irrespective of the size, all institutions can benefit from web-based application solutions to improve their operations. Web-based application technology provides better data management, reduces errors in administrative work and enhances security.

The key to make the most of the agency's website is to make it as accessible as possible, to enable its clients/stakeholders interact with the agency in a way that suits their information and service requirements. Nowadays, more and more clients/stakeholders are online 24/7, and as such they expect to be able to interact with the agency anytime, anywhere using any device (desktops, laptops, tablets, androids, mobile phones, etc.), platforms and browsers possible. In this light, every agency should embark on the enhancement of its website to make it more professional, dynamic and interactive, and user-centric to encourage citizen participation.

## **B. Statement of the Problem**

In any agency, clients frequently ask questions, have requests, some report complaints or issues, some provide suggestions, opinions, tips, etc. A responsive agency should be able to address these various types of concerns immediately in order to ensure customer satisfaction. Government agencies with a nationwide scope should have a means to enable their clients to interact with the agency using various modes (online, mobile, and face-to-face). In the Philippines, most of the government websites do not have facilities to enable online submission of questions, feedback, complaints, or suggestions. This is one major reason why many Filipinos are not happy with the services provided by the government. Thus it is high time that an “issue tracking system” or “customer support system” be established.

In line of the facts above, this study focuses on “Customer Support Services Content Management System for Government Agencies”.

## **C. Objectives of the Study**

The aim of the special project is to create a web-based application for lodging of requests, queries, complaints, issues, concerns, suggestions/opinions, tips, and etc., well as for tracking the status of redresses/comments from anywhere.

The application has four user types:

The general public are the common masses. They are usually customers or stakeholders of a government agency. (Ex. For LTO, potential clients are vehicle owners, drivers, insurance, car dealers, etc. For SEC, potential clients are companies, partnerships, etc.).

The system administrator is an employee of the government agency who manages and oversees the entire system.

The department admin is an employee of the government agency who is the administrator for his respective department. He/she is in charge of a specific department in the agency.

The department user is an employee of the government agency who works under that specific department. He/she is designated to a specific department.

The application caters to four major fields of information and messages:

Petitioner type is the type of the client submitting the ticket. For example in SEC, it can be a requestor, investor, or complainant.

Category refers to the type of message or information to be uploaded on the application. For example, it can be a request, query, complaint, issue, concern, suggestion/opinion, tip/alert, etc.

Subject specifies the category of the message. For example, for SEC, it can be for the company, broker, etc.

Area is the specific area of concern. This field will determine the department to which the ticket must be routed to. The system will automatically forward the ticket to a designated department based on the area. (Example: for SEC, it can be registration; certification; legal matter; capital market; securities; etc. For LTO, it can be for registration; renewal of registration; apprehension and adjudication cases; etc)

1. The general public should have the ability to:

- a. Register and create a user profile
- b. Login/logout
- c. Reset password, in case he forgets his password
- d. View and update his user profile including change privacy settings (i.e. remain anonymous especially when reporting a crime (ex. bribery, scam, falsification of documents, etc)
- e. View notification when somebody replies to his message/ticket.
- f. Send a message (create a ticket), which could be a request, query, complaint, issue, concern, suggestion/opinion, tip, etc. He also has the option to attach a file to his message.
- g. Reply or send a follow up message to his own ticket.
- h. Track the status of his message
- i. Close or Cancel the ticket

2. The system administrator should have the privilege to:

- a. Login/logout
- b. Reset password, in case he forgets his password
- c. Update his user profile
- d. View notifications when somebody replies to a ticket assigned to him.
- e. Perform user account management
  - i. View user profiles (both clients and government agency users)
  - ii. Add/edit/deactivate departments

- iii. Add/edit/deactivate department users
      - iv. Blocks customers (i.e. abusive users, spammers)
  - f. View, add, edit, and deactivate the following fields:
    - i. Petitioner type
    - ii. Subject
    - iii. Category
    - iv. Area
  - g. View the dashboard to know if there are new messages
  - h. Read the messages and reply to the messages
  - i. View or download the file attachments
  - j. Assign/Re-assign the ticket to another government agency user
  - k. Change ticket status (example: new, in-process, closed, cancelled)
  - l. Search ticket by ticket number
  - m. Show total number of tickets using the following filters:
    - i. Ticket Status
    - ii. Date Range
    - iii. Category
    - iv. Subject
    - v. Area
    - vi. Assigned to (government agency user to whom the ticket is currently assigned)
3. The department admin should have the privilege to:
- a. Login/logout
  - b. Reset password, in case he forgets his password
  - c. Update his user profile

- d. View notifications when somebody replies to a message assigned to him
  - e. View user profiles (both clients and government agency users)
  - f. View list of departments
  - g. View list of following fields:
    - i. Petitioner type
    - ii. Subject
    - iii. Category
    - iv. Area
  - h. View the dashboard to know if there are new messages assigned to his department
  - i. Read the messages and reply to the messages
  - j. View or download the file attachments
  - k. Assign/Re-assign the ticket to another government agency user
  - l. Change ticket status
  - m. Search ticket by ticket number
  - n. Show total number of tickets using the following filters:
    - i. Ticket Status
    - ii. Date Range
    - iii. Category
    - iv. Subject
    - v. Area
    - vi. Assigned To (government agency user to whom the ticket is currently assigned)
4. The department user should have the privilege to:
- a. Login/logout
  - b. Reset password, in case he forgets his password

- c. Update his user profile
- d. View notifications when somebody replies to a ticket assigned to him
- e. View user profiles (both clients and government agency users)
- f. View list of departments
- g. View list of following fields:
  - i. Petitioner type
  - ii. Subject
  - iii. Category
  - iv. Area
- h. View the dashboard to know if there are new messages assigned to his department
- i. Read the messages and reply to the messages assigned to him
- j. View or download the file attachments
- k. Assign/Re-assign the ticket to another system user
- l. Change ticket status
- m. Search ticket by ticket number
- n. Show total number of tickets using the following filters:
  - i. Ticket Status
  - ii. Date Range
  - iii. Category
  - iv. Subject
  - v. Area
  - vi. Assigned to (government agency user to whom the ticket is currently assigned)

Functionality	Client	System Administrator	Department Administrator	Department User
Register	✓	✗	✗	✗
Login / logout	✓	✓	✓	✓
Reset password in case he forgets his password	✓	✓	✓	✓
View and update profile	✓	✓	✓	✓
View notification if somebody replies to a ticket he submitted	✓	✗	✗	✗
View notification if somebody replies to a ticket assigned to him	✗	✓	✓	✓
Create and submit a ticket (file attachment optional)	✓	✗	✗	✗
View ticket logs	✓	✓	✓	✓
Close / Cancel ticket	✓	✓	✓	✓
Change ticket status to In-process or New	✗	✓	✓	✓
Perform user account management	✗	✓	✗	✗
View list of Petitioner type, Subject, Category, Area	✗	✓	✓	✓
View list of tickets he submitted	✓	✗	✗	✗
View all tickets	✗	✓	✗	✗
View new tickets assigned to his department	✗	✓	✓	✓
View tickets assigned to him	✗	✓	✓	✓
Read and reply to the ticket	✓	✓	✓	✓
View or download file attached to the message	✓	✓	✓	✓
Assign / Reassign the ticket	✗	✓	✓	✓
Show ticket report	✗	✓	✓	✓
Search by ticket number	✗	✓	✓	✓

**Table 1: Functionality per user type**

Please note that even though the Department Admin and the Department user have the same capabilities in the system, the Department Admin is still higher in the hierarchy since he acts as the supervisor/moderator for his department. He is also the one who receives the email notification once a new ticket is submitted to his department.

#### D. Significance of the Project

The system will benefit the following:

**Government Institution Clients.** The system would help the clients of different government institutions to provide feedback regarding the services of their chosen government institution. This system can help:

- a. Encourage client participation
- b. Lessen waiting time for reply (as opposed to going to the agency physically)
- c. Eliminate travel time (as opposed to going to the agency physically)
- d. Provide faster way of reporting or informing the agency of any immediate concerns

**Government Institutions.** The system would help the government institutions to be able to efficiently monitor and audit the status of customer concerns. This system can provide faster, more

immediate action on the government institution's end. This system could also help in immediately determining the productivity of each individual in the department.

#### **E. Scope and Limitations**

The system is limited to the following:

- a. It can only cater to specific type of messages (e.g. questions, queries, complaints, issues, concerns, suggestions/opinions, tips)
- b. Submission of documents required by the government agency to render service (Example: For LTO, photocopies of certificate of vehicle registration and OR Transactions to process car registration for the given period) is not covered. Thus client must personally submit such documents. However if the agency has an online system for that service already in place, then the customer should use that system instead this proposed system. Similarly, for some types of request that will require the client to go personally to the agency (For example, if a document requires to be signed the client needs to process such document in person), those will not be covered by the proposed system either.
- c. The message does not "automatically" expire; hence the status of the ticket needs to be manually changed.
- d. Interpretation of productivity report is not covered by the system.

#### **F. Assumptions**

1. There should be a clear-cut policy within the agency on how to handle each type of message. Similarly, there should be a policy regarding the process of answering the messages.
2. There should be qualified people (manpower) who will handle the system.
3. There should be proper designation among the staff with regard to addressing the tickets.

## **II. Review of Related Literature**

The governments' objectives and goals of bringing services online are same as that of commercial organizations, which involves bringing efficiency and effectiveness to the services. Apart from this, governments intend to bring transparency and gain citizen's trust and enhance democracy. The e government strategy revolves around, increased accessibility of information, enhancing government performance and efficiency, cost reduction, improving the competitiveness of the government, ICT sector promotions, e-skilling of the public sector and boosting e-commerce activities [1], however, compared with the abundant research examining the quality of face-to-face services, investigations of online service quality remains in their infancy [2].

Involving citizens in decision making has numerous advantages. It enables governments to understand public wants and determine preferences and priorities, reduce conflict and build confidence in the government, improve the quality of the decisions made, enhance transparency and accountability and enrich better perceptions of the governments' fairness and justice; are reasons put forward [3] to show the advantages of involving citizens' in decision making. Furthermore, he states that it is important and necessary for the public to get involved in decision making which impacts and affects them.

As information technology continues to advance, service providers can easily replicate or even leapfrog their competitors in Web site design, system functionality, and product offerings. Therefore, unique service experiences should become increasingly crucial because they can create sustainable competitive advantages [4]. System quality embraces important characteristics of an information system, invariant of system usage or applications, such as accessibility, flexibility, integration, reliability, and timeliness [5].

Researchers [6] concluded that the emergence of the Internet as both a distribution and a communication channel has created the opportunity for a range of online organization–customer interactions. These interactions occur during customer activities such as information search for company and/or product details, using online services, or participating in online communities or leisure pursuits. There is a body of literature that looks at website quality, including the development of measurement instruments.

This has been the subject of considerable interest among information system (IS) research, marketing academics, and practitioners, spurred by the original work of certain authors [7]. Due to the ever-increasing importance of customer service in customer satisfaction and loyalty, a number of IS – customer relationship management (CRM) research scholars [8] have begun to examine how to identify and use IT to manage customer service activities. At the same time, special attention has been given to electronic CRM [9]. This increased emphasis on IT may enable firms to change the way they interact and coordinate practices with customers, reflecting an appropriate implementation of IT.

This, in turn, could create more competitive services and serve as a strategic resource that facilitates major changes in competitive behavior, marketing, and customer service. Nonetheless, there is limited empirical research on how customer service may lead to superior firm performance and how IT may be exploited to facilitate customer service. Thus the relationships among these factors remain

incomplete and unclear. Furthermore, the fundamental elements of customer service are not well understood [10].

The demands of customers concerning the quality and innovativeness of products and services put firms under pressure. Together with the rising pressure to reduce service costs, this may require firms to redesign their organizational structure. One possible solution is to focus service innovation practices on the processes of service delivery. While many essential service processes that support customer service are invisible to firms, understanding how innovative service processes can facilitate competitive customer service is essential to attain superior firm performance. Despite substantial ISCRM and e-CRM research on IT applications for customer service, there is a lack of studies demonstrating the potential benefits and pitfalls of service innovation practices [11].

In particular, there is little information on the roles and contribution of service process innovation in managing and facilitating customer service. Furthermore, from the RBV, to maintain a competitive advantage, it is imperative for firms to possess rare and valuable resources. Interacting with customers is critical for firms to share resources and capabilities and develop new products/services, which in turn lead to competitive customer service. Firms should understand that customer value can be generated by (re) designing or innovatively utilizing resources and capabilities that may be embedded in service processes. Accordingly, developing a deeper understanding of service process innovation is but one of many challenges facing firms that attempt to redesign service processes and develop innovative service delivery methods [11].

The Internet presents a powerful new channel for improving the government's situational awareness by enabling citizens to efficiently and conveniently share knowledge with government. Such systems can facilitate deep collaboration between citizens and government. Governments have increasingly turned to online citizen consultations through "e-participation" and "e-rulemaking" initiatives to collect input from the public. e-Rulemaking not only makes it easier for citizens to provide comments by eliminating the constraints of time and space, but also enables participants to view, support, build from, and collaborate with the comments of others, resulting in a far more interactive process that significantly deepens and enriches stakeholder dialog; enabling government to collect citizen preferences with far greater levels of sophistication than periodic, binary votes [12].

Also the advent of digitized information and web-connected databases enables the government to deliver highly personalized information to help inform citizens' personal decisions. Government data mining, for instance, could notify users of relevant health risks, useful government programs for which they qualify, and neighborhood crime. Such personalized information can be particularly effective in "nudging" citizens to make socially-beneficial choices. Such data mining and dissemination helps citizens make more informed, socially responsible decisions while reducing the need for government intervention [13].

### **III. Theoretical Framework**

Philippine government agencies handle customer service support services, products, and assets differently as they have different protocols for their departments. As an example, when DTI receives a complaint, they would send notices of mediation to parties involved within five days. The whole process from receipt of the complaint to the arbitration decision is estimated to last for only 20 days. In that timeframe, DTI will make every effort to resolve the issue to save the complainant time and expense [17].

This application seeks to embark on the enhancement of government websites to make it more professional, dynamic and interactive, and user-centric to encourage citizen participation. Various systems serve as the foundation and bases of the special project. They are described below:

#### **Issue Tracking System**

An issue tracking system (ITS) is a software application that allows an enterprise to record and follow the progress of every problem or "issue" that a computer system user identifies until the problem is resolved. With an ITS, an "issue", which can be anything from a simple customer question to a detailed technical report of an error or bug, can be tracked by priority status, owner, or some other customized criteria. An ITS generally provides the user with a way to report an issue, track progression towards its resolution, and know who is responsible for resolving the issue. It also allows the manager of the system to customize the tracking procedure so that unnecessary documentation on the part of the problem solvers does not become a waste of time. Many kinds of enterprises use ITS applications, including software developers, manufacturers, IT help desks, and other service providers [14].

#### **Ticketing System**

A ticketing system tracks all events, failures and issues. It is a focal point for help desk communication, that is used to track all communications that are both internal and external. It can be used to also follow each case, including internal communication between technicians [15].

#### **Helpdesk System**

A helpdesk is a system that can be used for answering the technical questions of its users. Most major IT companies have set up help desks to respond to questions from their customers. The questions and their answers are usually transferred using e-mail, telephone, website, or online chat. Additionally, there are internal help desks aimed at offering the same form of help, but only for the employees within the organization. Generally, a helpdesk system consists of at least 3 parts, namely Ticket Management, Automation Suite, and Reporting & Optimization. Together, these three functions essentially form the crux of a helpdesk operation as well. [16].

#### **Customer Support System**

A Customer Support System is used to interact with a customer for their immediate benefit, including components such as the contact center, the help desk, and the call management system. It

also includes assistance in planning, installation, training, trouble shooting, maintenance, upgrading, and disposal of the product [14].

The mixture of these systems provide potential as effective and efficient managerial tools that collect, store, organize, and manage an enormous volume of data and information. By using the function of upload and download, the most up-to-date information and data can be displayed on the Internet on a real-time basis. The heads also can also provide information to employees through an intranet or Internet system. They can also do many mundane and routine tasks more easily and quickly, such as responding to queries.

The mixture of functionalities of the mentioned system also facilitates as the government's linkages with citizens (for both services and political activities). Hence, the application can serve as both a communication and a public relations tool for the general public. Information and data can easily be shared with and transferred to external stakeholders. In addition, the system will enable the government to promote public participation in policy-making processes by posting public notices and exchanging messages and ideas with the public.

The self-service component of the systems will provide interface to users to manage their own profile information, such as user registration, reset passwords, update contact information, and request for accessing user information, if required, etc. This application will then have the facility to send notifications – alerts to its registered users.

Lastly, the integration strategy used by the researcher in mixing the functionalities of the mentioned systems is very critical as most of the departments might have built their own application and run in silo form. These departments need to be integrated to the system to achieve better citizen service. The application works as a single source of information for all government content, and provides front end or start point for all the government services provided by the various government departments. The functionality of departmental applications and services provided by the departments is made accessible on the system as services using web services technologies. Therefore, the web service based implementation of transactional government services will make them reusable, easy to integrate, interoperable and easily accessible.

## IV. Design and Implementation

### A. Context Diagram

The users that interact with the proposed system are the general public, head administrator, department admin, and department user as shown in Figure 1.

**Figure 1: Context Diagram**

## B. Use Case

**Figure 2: Use Case Diagram for Client**

**Figure 3: Use Case Diagram for Government Agency User**

**Figure 4: Submission of Ticket to be answered by Department Admin**

**Figure 5: Submission of Ticket to be answered by Department User**

### C. Process flow of Ticket Status Change

The state transition diagram for ticket status change is shown in Figure 3.

**Figure 6: State Transition Diagram**

#### New

1. When creating a new ticket, the client/customer will select from a dropdown for the following fields:
  - a. Petitioner Type
  - b. Category
  - c. Subject
  - d. Area

The client shall also have the option to attach a file to his message.

2. When a client submits a ticket, it will be tagged as “new”.
3. There are no actions taken yet by the head administrator, department admin, or department user.
4. There will be an automatic email notification that will be sent to the client saying that “you have successfully sent your message to us”.

#### In- Process

1. This status denotes that the message has been read and is being examined by the head administrator, department admin, or the department user.

2. Tickets are manually acknowledged, meaning that their ticket status must be updated manually by the government agency user who will be handling that specific ticket.
3. Tickets sent can be forwarded/reassigned to the other department users.

### **Cancelled**

1. Tickets may be cancelled by the agency user if he feels that the ticket is SPAM.
2. The client can also cancel the ticket if he doesn't want wish it to progress. For example, if the client loses interest in the ticket, and doesn't wish to pursue it.

### **Closed**

1. Closing the ticket can either be client or agency initiated.
2. This will be the status when the ticket has been resolved or has be elevated to higher level (ex. Case already filed in court, case scheduled tor investigation).
3. If the ticket cannot be resolved because the client's concern is out of the agency's scope, the agency may still close the ticket once they have referred to client to the correct agency.
4. If the client has not responded for a certain number of days, the ticket can be closed. (client assumed no longer interested).

## D. Entity Relationship Diagram

Figure 7: Entity Relationship Diagram

## E. Data Dictionary

Field	Type	Description
lid	int	primary key; unique identifier of the user
lfirstname	varchar	first name
lmiddlename	varchar	middle name
llastname	varchar	last name
lusername	varchar	username
lpassword	varchar	password
lmobilenumber	varchar	mobile number
lphonenumbers	varchar	phone number
lemail	varchar	email address
ltype	varchar	type of user. Either 'user' or 'system'
lstatus	varchar	determines whether account has been activated yet
lgroup	varchar	determines whether user is 'system admin', 'department admin', or 'department user'
lcode	varchar	random code generated used for account activation and for password reset
lofficeaff	varchar	office affiliation
laddress	varchar	address
lphone	varchar	office phone number
lfax	varchar	fax number
lmailaddress	varchar	mailing address
lbdy	varchar	birthdate
lpersonal	varchar	privacy setting indicator. '1' if yes
ldepartment	varchar	department where user belongs to
lblock	varchar	determines if client is blocked or not. '0' if yes, '1' if no
lreason	varchar	reason for blocking a client
ldisable	int	indicator if user is disabled. '0' if no, '1' if yes

Table 2: tbluser table

Field	Type	Description
lid	int	primary key; unique identifier of the ticket
lpetitioner	varchar	petitioner/client name
lticketno	varchar	ticket number
lcategory	varchar	category
lsubject	varchar	subject
larea	varchar	area of concern
lmesg	text	content of message
lfile	varchar	file name of attached file
lstatus	varchar	status of ticket
ldate	varchar	date submitted
ltime	varchar	time submitted
lassign	varchar	assigned to whom
ldepartment	varchar	department where ticket is automatically routed to
lpettytype	varchar	petitioner type
llastdatechat	varchar	last date when a reply was submitted
llasttimechat	varchar	last time when a reply was submitted

Table 3: **tblticket** table

Field	Type	Description
lid	int	primary key; unique identifier of the department
lname	varchar	name of department
ldesc	varchar	description of department
ldisable	int	indicator if department is disabled. '0' if no, '1' if yes

Table 4: **tbldepartment** table

Field	Type	Description
lid	int	primary key; unique identifier of the category
lname	varchar	name of category
ldesc	varchar	description of category

## **V. Architecture**

### **A. System Architecture**

The system “Customer Support Services Content Management System for Government Agencies” was implemented using PHP. The GUI is developed using CSS and Javascript.

### **B. Technical Architecture**

The minimum system requirements:

**For the server:**

1. XAMPP with PHP 5.5 (PHP, MySQL, Apache, Sendmail)
2. 1.0 GB free hard disk space
3. 1.0 GB RAM
4. 1.67GHz single core processor

**For the client:**

1. 1.0 GB free hard disk space
2. 1.0 GB RAM
3. 1.67GHz single core processor
4. A web browser such as Internet Explorer, Mozilla Firefox, Safari, Google Chrome, etc.

## VI. Results

**Figure 8: Login page**

The login page will be the same for both the client and the government agency users. The client will use his email address to log in, while the government agency user will use his username.

The screenshot shows a registration form titled "Register". At the top, there is a section for "Required fields" with red asterisks. The required fields are: First Name\*, Middle Name\*, Last Name\*, Email Address\*, Password\*, Confirm Password\*, Mobile\*, Office Affiliation, Address, Telephone Number, Fax Number, and Mailing address (Country/City). There is also a field for Birthday\* with a date input and a calendar icon. Below these fields are two checkboxes: one for agreeing to Terms and Conditions and another for keeping personal information private and confidential. A CAPTCHA section follows, displaying the word "hamate" in red and asking to write it down in a text input field. There are "Register" and "Reset" buttons at the bottom, along with a link for "Already Registered? Login".

**Figure 9: Registration Page**

This is the registration page for the client. The required fields to enter are first name, middle name, last name, email address, password, mobile number and birthday. The system will display an error if the required fields are left blank. When the client clicks on the “Register” button, an account will be created for him, and the system will automatically send him an email for account activation. Once he confirms/activates his account, then he will be able to log in.

**Figure 10: Forgot Password page**

The forgot password page will be the same for both the client and the government agency users. The user must enter his email address, and then the system will send him a link where he can change his password. After he changes his password, he will be able to log in again.

**Figure 11: Home page for client**

This is the home page for the client. He can submit a message/ticket by clicking on the “Create New Ticket” button. He can view all tickets with “New” status of the home page. He can also view his other tickets by clicking on the “Tickets Tab”. On the upper middle part, he can see if there are new notifications. On the top right portion, he can click on it to view his profile and log out. Below that, he can see a summary of the number of tickets he submitted.

**Figure 12: Create new ticket**

To create a new ticket, the client must select a Petitioner Type, Category, Subject and Area. Then he can type in his message, and he also has the option to attach a file. After he submits his ticket, the system

will send him an email notifying him that the message was successfully sent. The system will also send an email notification to the Department Admin assigned to that specific area of concern that a new message has been submitted.

The screenshot shows the 'Customer Support System' interface. On the left is a sidebar with links: Home, Tickets (which is selected and highlighted in blue), In Process, Closed, and Cancelled. The main content area is titled 'In-Process'. At the top right, there are four circular icons with counts: 'New' (0), 'InProcess' (0), 'Closed' (0), and 'Cancelled' (0). Below these are two sections: 'Records' and a table. The table has columns for #, Ticket No., Petitioner, Petitioner Type, Category, Subject, Area, Date/Time Submitted, and Status. A message 'No ticket found' is displayed in the table area.

**Figure 13: Tickets page for client**

Here, the client can see the tickets that he has submitted. The tickets are segregated by ticket status (i.e. In-process, Closed, Cancelled).

The screenshot shows the 'Customer Support System' interface. At the top right, it says 'Welcome, Harold del Castillo'. Below the header, there are four status indicators: 'New' (green), 'InProcess' (blue), 'Closed' (grey), and 'Cancelled' (red), each with a count of 0. On the left, a sidebar menu includes 'Home', 'Tickets >', and 'Users'. The main content area is titled 'Petitioner' and contains a 'View Profile' dialog. The dialog form fields are as follows:

Firname :	Harold
Lastname :	del Castillo
Username :	harold.delcastillo@gmail.com
Password	(empty)
Confirm Password	(empty)
Mobile :	09158109445
Email :	harold.delcastillo@gmail.com
Office Affiliation :	(empty)
Address :	(empty)
Phone :	(empty)
Fax :	(empty)
Birthday :	01-01-2000
Privacy Setting :	<input checked="" type="checkbox"/> I would like my personal information to be kept private and confidential.
<b>Update Profile</b> <b>Close</b>	

**Figure 14: Profile page for client**

Here, the client can view and also update his user profile.

The screenshot shows the 'Customer Support System' interface. At the top right, it says 'Welcome, System Administrator'. Below the header, there are four status indicators: 'New' (green), 'InProcess' (blue), 'Closed' (grey), and 'Cancelled' (red), each with a count of 0. On the left, a sidebar menu includes 'Home', 'Tickets >', 'Users >', 'Settings >', and 'Reports >'. The main content area is titled 'Home / New Tickets' and contains a 'Records' table. The table has the following columns: #, Ticket No., Petitioner, Petitioner Type, Category, Subject, Area, Date/Time Submitted, and Status. A message at the top of the table area says 'No ticket found'.

**Figure 15: Home page for government agency user**

The home page for the government agency user will have more tabs compared to the client. These additional tabs are “Users”, “Settings” and “Reports”. Tickets with “New” status are displayed on the home page. On the upper middle part, he can see if there are new notifications. On the top right portion, he can click on it to view his profile and log out. Below that he can see a summary of the number of tickets.

Here, the government agency user can search for a ticket by typing the ticket number (whole or partial ticket number).

**Figure 26: Profile page for government agency user**

Here, the government agency user can view and update his profile.

## **VII. Discussions**

As previously mentioned, the aim of the special project is to create a web-based application for lodging of requests, queries, complaints, issues, concerns, suggestions/opinions, tips, and etc., as well as for tracking the status of redresses/comments from anywhere. With the use of this system, the government agency can provide another avenue for their clients to send in their concerns and interact with the agency. The agency's customer support services will no longer be limited to just face-to-face, phone or email interactions.

With the use of this system, the clients will be able to track the status of their concerns in a simple and efficient way. It would be similarly be beneficial to the government agency because they would be able to systematically and effectively provide feedback to the client, and they could also properly track or audit which types of concerns are mostly being brought up by their clients since the system has a way of generating summary of messages received and acted upon per category, per subject, per department on a daily, weekly or monthly basis.

## **VIII. Conclusion**

A government agency should be responsive to the needs of its clients/stakeholders. It should lay out platforms that would encourage citizen participation; thus, this system is a definite answer to such need.

This system is an online facility for citizen participation to receive requests, queries, complaints, issues, concerns, suggestions/opinions, tips. Establishment of this system site shall encourage users to send in their issues and feedback that are relevant to the concern government agency.

However, it is also vital that the agency who is going to adopt this system should have clear-cut policies for addressing the different issues raised, so that the implementation of the system would be successful.

## **IX. Recommendations**

Below is a list of possible enhancements/improvements that could be applied to the system:

1. One possible improvement might be to add SMS functionality to the system as well. Currently, the system only offers email notifications to both the client and the government agency users. Adding an SMS notification feature to the system could be considered a relevant enhancement.
2. The search function could be further enhanced by being able to search for tickets using words or phrases that are in the content/body of the message.
3. Archiving of tickets could be added as another functionality of the system.
4. Searching for archived tickets could also be added as another functionality of the system.

## **XII. Acknowledgment**

Finally, at long last! This is it!!! As the saying goes, better late than never.

First and foremost, I would like to give my thanks and praises to God Almighty, to whom we owe everything. I thank Him for giving me the strength and courage to finally finish my thesis.

Secondly, I would like to express my deepest appreciation and gratitude to my family, especially to my sisters, who have always been there for me. Thank you for the kindness, love and generosity, and for all the support --- moral, emotional and financial. You have been there for me during my darkest hours, and for that I am forever thankful.

I would like to thank my friends, who have constantly nagged me to finish my studies and earn my degree. You guys have motivated me to go back to school to complete my studies.

I would also like to thank the university, and the College of Arts and Sciences, for approving my readmission, and allowing me to re-enrol after a long hiatus.

To Dr. Vincent Peter Magboo, thank you for convincing me to continue my studies in UP. Had it not been for your wise counsel and persuasion, I would have otherwise filed for honorable dismissal and have applied to another school.

To my thesis adviser, Ma. Sheila Magboo, thank you for being a kind, understanding and supportive adviser. Thanks for all the help and the guidance. Thank you for believing in me, and for always motivating me to do my best.

To everybody who has inspired me in any way, big or small, and to everyone who has helped me in my personal or academic life, thank you, thank you, thank you!!! 😊
