CHAPTER I

INTRODUCTION

A. <u>Background of the Study</u>

Ugnayan ng Pahinungod is a program of the University of the Philippines which institutionalizes volunteerism among UP constituents through the rendering of free services to communities in greatest need. This program is being implemented in all autonomous campuses of UP except in Diliman. [1]

The Ugnayan ng Pahinungod Manila offers the following program packages: 1) Educational Assistance Program, 2) Community Health Programs, 3) Community Social Welfare Programs and 4) Advocacy Program. Please see Figure 1 for a summary.

The **Educational Assistance Program** seeks to improve the quality of public educational system in terms of skills enhancement and manpower augmentation. Volunteers may serve under the following components: 1) Tutorials, 2) Teachers' Development and 3) Gurong Pahinungod.

The **Community Health Programs** are held to provide direct assistance and sharing of knowledge through empowerment of communities to take active role in alleviating the existing health concerns in underserved communities. Among its components are: 1) Health Missions, 2) Health Training/ Health Education, and 3) Emergency Room Volunteers.

The **Community Social Welfare Program** promotes the interest and welfare of some marginalized sectors of the society through activities targeting identified needs of the

community. The components of this program are: 1) Summer Immersion Service Program and 2) Program for the Street Children.

The fourth program is the **Advocacy Program** which aims to promote and campaign for volunteerism among different units of the University concerned sectors. Among the works done under this programs are documentation of volunteer works, publications and networking with other organizations, offices and individuals.

Time and number of volunteers available are the main concerns of the office. There is much to do and the staff personnel are limited in number. To maximize the manpower available, the Program Deployment Management System for Ugnayan ng Pahinungod is proposed. This aims to help the program coordinator who at the same time acts as a regular volunteer to missions. This will aid in managing the requests for missions, from deciding if requests should be approved to scheduling them.

The Program Deployment Management System for Ugnayan ng Pahinungod seeks to assist in decision-handling and documentation. The system will eliminate the tedious need of manually checking for conflicting schedules of new program requests to the already approved programs and searching for volunteers who are available for the desired date.

B. Statement of the Problem

The Program Deployment Management System is a database monitoring system which seeks to answer the problems in program management.

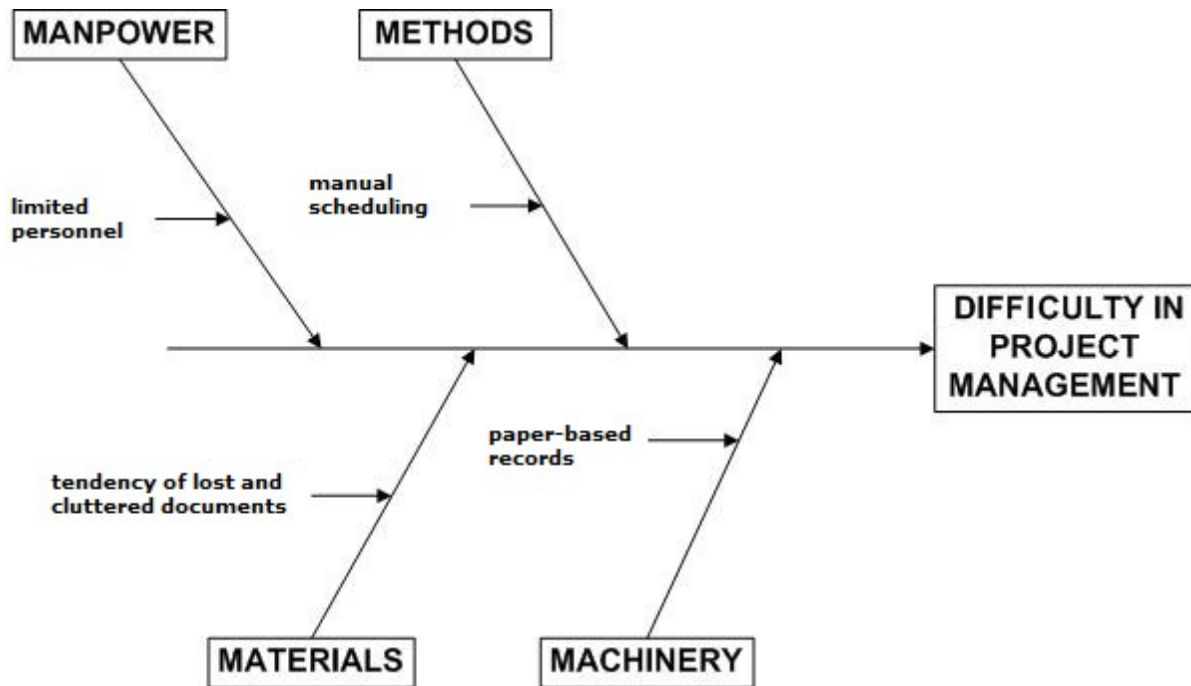

Figure 2. Cause and Effect Diagram

The office of the Ugnayan ng Pahinungod is composed of volunteers and office personnel. The office personnel and some volunteers who are appointed as coordinators are the people who coordinate with the volunteers and other stakeholders of an event deployment. There are only a few of them and there is a lot of coordinating to be dealt with.

The task of scheduling a program is done manually. The program coordinator manually checks for conflicting schedules to the desired date and also manually checks for volunteers that are suited for the program. Some programs have special volunteer needs so the coordinator has to be

particular with this, i.e. nurses and doctors for medical mission, surgeons for surgical missions, etc.

At present, the records of the programs accomplished by the office and the information about the volunteers are available as hard copy and as .doc files. Possibilities of cluttering or losing these documents are also high.

For report generation, officers are asked to fill up the accomplishment report form (see Appendix) that asks the accomplishments that were done for that month. The Administrative Officer II will then collate them and make the final monthly report. The annual report will also be derived from the collated monthly reports.

In light of these, I would like at this point to summarize the things required of a software solution that would satisfactorily meet the requirements for an Ugnayan ng Pahinungod program management system, as follows:

- System should be a searchable online repository of events and volunteer profiles
- System should show progress of every event entered into it, from its initiation to post-deployment by showing statuses of tasks needed to be accomplished which includes fund solicitation, ocular evaluation, volunteer gathering, deployment and accomplishment recording
- System should allow the office to accept online requests for event deployment made by volunteer organizations external to Pahinungod
- System should store organization profiles for future reference, i.e. taking account of past reputation (good or bad) of organizations

- System can produce detailed monthly and annual reports for events successfully deployed

C. Objectives

The Program Management System aims to save time and effort in organizing programs and missions. It will also be publicly available so even non-members can be informed of the activities the office has accomplished. The proposed system offers online submission of requests to organization representatives.

The system will assist the office staff in verifying and managing several aspects of a program, e.g., the organization's background, conflicting events, result of ocular visit, to the selection of required volunteers, and also to the sufficiency of funding if applicable. (In an ocular visit, volunteers and the office staff check the location of the deployment and make their evaluation about the place.) Only administrators can key in the locations. The system will send notifications to the appropriate members.

The main actors in the system are:

- Guest – unregistered member and a prospect volunteer/representative interested in knowing more about the organization
- Representative - a member of a third party organization that can be of partnership with the organization in deploying events
- Volunteer - confirms availability for an event and checks coming events
- Program Coordinator – in-charge of coordinating with the third party organizations, and volunteers of a program

- Administrative Officer IV - in-charge of regulating funds

- Program Chairperson - initiates programs, approves/rejects requests

- Administrative Officer II - in-charge of documentations and monitoring of status of requests

- Director - dictates what necessary actions are to be undertaken after receiving an event request

In summary, the following are the use cases for each user:

Admin – Admin Officer II, Director
AOIV – Admin Officer IV
CP – Chairperson
PC – Program Coordinator
Vol - Volunteer
Rep – Representative
G - Guest

System Function / User	Admin	AOIV	CP	PC	Vol	Rep	Guest
Search							
View upcoming and archived events	X	X	X	X	X	X	X
Search for an event	X	X	X	X	X	X	X
Search for an organization	X	X	X	X	X	X	X
Search for a user	X						
Manage account							
Add/delete all accounts	X						
Edit own account information	X	X	X	X	X	X	X
Edit membership/ availability to a mission	X	X	X	X	X		
Manage organization							
Add/Edit/Delete all organizations	X						
Add/Edit/Delete own organization	X	X	X	X	X	X	

Edit remark/ reputation	X						
Manage request							
Submit request for a program *	X	X	X	X	X	X	
Submit cancellation request	X	X	X	X	X	X	
Approve/disapprove requests	X		X				
View statuses of tasks	X		X		X		
Add additional task for an event	X		X				
Update status of a task	X		X				
Select volunteers for a program	X		X				
Make an ocular evaluation	X						
Manage event							
Add/edit/delete events	X		X				
Suggest a location for a program **	X		X				
Add/Edit/Delete sponsor funding	X						
View volunteers involved in an event	X		X				
Generate reports	X						

* Health Training, Teachers' Development Program and Health Missions
** Tutorial, Gurong Pahinungod, Summer Immersion Service Program, Program for Street Children

- View upcoming and archived events – this shows the events that volunteers can join in, and also the past events where the other volunteers who were not able to join can know what had taken place in that event.

- Search for an event – viewers can have an specific event in mind and wish to know more about it. They can search for it in the system.

- Search for an organization – a personnel may wish to get the location of an organization,or other contact details to set a meeting with them

- Search for a user – administrators can check if a specific user has his account confirmed, or wish to disable login for an account. The Search for a user functionality is useful for that.

- Edit account – users may want have their contact details updated. They can edit their own account so their details will be updated.

- Edit/Mark a reputation – some organizations may have had a bad reputation like cancelled an event without notice. The office may add this remark to a company's profile so they would be reminded in the next time that organization makes a request.

- Suggest a location – before an event gets a go, the location has to be evaluated. So an event may have a few prospect locations.

- Sponsor Funding – some events needs funds to push through, and the monitoring of funding helps with that.

- Generate reports – Reports are done monthly and annually to show all the accomplishments of the office.

D. <u>Significance</u>

The proposed system solves the two major problem areas for the office of Pahinungod: time and manpower constraints.

The system greatly simplifies the following aspects of program management, among other things: verifying volunteers' and organizations' statuses, checking for conflicting events and keeping track of amount accumulated as funds for events. These tasks would normally require looking at several files and folders. Time allotted in performing such tasks manually can now be used to accomplish other tasks.

Because the schedule is to be managed electronically, optimization of resources becomes possible. With the numbers of staff personnel being limited, the assignment of tasks can be done in a way that maximizes their time. This simple but necessary strategy is often times ignored due to limited time allotted for task scheduling.

The status of programs involving multiple steps can be tracked by indicating which tasks are or are not completed. Thus, documentation of programs, as they are taking place, will be made simpler and more effective. Monthly and annual reports can be generated by the system.

The web-based nature of the system will also broaden the scope of individuals that will know about Ugnayan ng Pahinungod, increasing the chances of a larger number of volunteers joining the volunteer effort, as well social and civic organizations that can be their partners in reaching out to communities.

E. Scope and Limitation

1. The scheduler cannot automatically assign schedules to volunteers, i.e., it does not employ a timetabling algorithm.

2. The general procedure for evaluating an event request is

   - checking calendar for conflicting event on desired date

   - checking organization's background

   - making ocular evaluation

   - checking sufficiency of required volunteers.

3. For events initiated by the office, fund sufficiency is another criterion to determine event deployment. Incoming funds will be monitored by the system, but how the funds will be dispensed will not be recorded.

4. Only representatives can fill up an event request form. Guests will be requested to sign-up for a representative account which should be verified by the administrative officer.

5. Events are expected to fall into the available set of event categories. Adding additional categories will not be supported and would need technical support.

6. Applications and requests are not done automatically. Human intervention is needed.

7. Volunteers can create an account online. Account created will also be subjected to verification by the administrative officer. Pending accounts will be approved after its owner has submitted required documents and made personal appearance on the office of Pahinungod.

8. A volunteer (member of Pahinungod) can also be a representative for an outside organization. He just has to enlist himself as a contact person for that organization.

9. Names of volunteers will be queued if their program preference matches the requested event. If the program requires specific type of volunteer, i.e. dentist, surgeon, etc., the volunteers' professions will be displayed

10. The Chairperson/ Administrative Officer II will have the final decision as to approve/reject a request.

11. This study is focused only on the optimization of manpower with regards to program scheduling and management. Other resources, such as medicines, medical/surgical supplies and equipments needed in the programs are not monitored.

F. <u>Assumptions</u>

1. It is the responsibility of the Administrative Officer II to update the system regularly.

2. It is also his responsibility to validate new representative accounts and create accounts for requesting users. Same with the volunteer accounts.

CHAPTER II

REVIEW OF RELATED LITERATURE

Event management comprises the coordination of all the tasks and activities necessary for the execution of an event regarding its strategy, planning, implementation and control, based on the principles of event marketing and methods of project management. [2] Proprietary software solutions for word processing, spreadsheets, project management or e-mail communication do not provide an integrated approach for event management. These are essential parts of a system for event management since they are automated versions of the each of the manual processes applied. The integration of these standalone applications will make up the proposed system. This literature review examines the different components that will be incorporated to the proposed system. This also addresses some of the fundamental questions surrounding the benefits of deploying such a system.

One of the components that will be included is the Record Management System. Records management is the practice of maintaining the records of an organization from the time they are created up to their eventual disposal. The record pertained here is the digital form of information: for example, office documents, databases, application data and email. A record management system is a record keeping system that maintains and provides access to records over time. It could be considered as an archive. Over the years, the use of electronic record management system has already established benefits. Electronic document management systems provide benefits over paper filing including cost savings, security, disaster recovery, remote access and process consistency. [3] A review of case studies, and some unpublished results

identifies the main principles applied by the cases that showed clear benefits by implementing an electronic records management system (ERMS) or an electronic document management system (EDMS). First, the record system must include the people, or the policy makers and users. Second, the record system must be integrated with the process of the organization. Third, frequently, the role of the record managers is to educate, advise and support the users. [4]

Records management is primarily concerned with the evidence of an organization's activities. As to the proposed system, it will store the different events deployed by the office. This will also be used in the system for the profile of each member to store information about them. These includes the application forms and the document requirements they submit either as proof that they are affiliated to the university or proof that they had graduated from a four-year course on another university. The system will follow the footsteps of the successful ERMS's and have the principles applied. There will be accounts for the members that will use it and it will be an integral part of the operation of the office.

Another component is the scheduling component. Manual scheduling is done in many fields. Personnel scheduling problems occur in a variety of service delivery setting, including the scheduling of airlines and hotel reservation personnel, nurses in hospitals, coastguards, patrol officers and others. [5] Workforce schedules have an impact on the health and satisfaction of employees as well as on their performance at work. Therefore, computerized workforce scheduling has interested researchers for over 30 years. [6] The problem is characterized by assigning workers to jobs on different shifts given a restricted time-frame.

There are commercially available software applications that solve timetabling problems. These applications arrive at satisfactory solutions within a specific model. Several algorithms have to

be applicable to timetabling but they are nearly all designed to address specific problems. For each specific situation, the model has to be redesigned. This hinders reuse of software to problems for which it was not specifically designed for.[7]

Despite decades of research into automated methods for employee scheduling problems and some academic successes, many institutions still resort to manual practices. Only 30 percent of systems that research articles discuss are implemented, and there is very little academic involvement in systems that third-party vendors offer.[8] In a study done to classify the different scheduling problems, the authors concluded about the general desires of planners. "In general there is no wish for a fully automated planning. Instead, support will be strongly appreciated. Most planners prefer evaluation tools that indicate possibilities and that warn for mistakes such as double bookings." [9] The system will give guidance as needed, reminding planners what tasks are already done and checking the requirements for a program request like conflicting schedules and insufficiency of volunteers and/or funds.

This function of the system makes it resemble an enterprise resource planning software, or ERP. An enterprise resource planning software attempts to integrate all departments and functions across a company onto a single computer system that can serve all those different departments' particular needs. Each of those departments typically has its own computer system optimized for the particular ways that the department does its work. But ERP combines them all together into a single, integrated software program that runs off a single database so that various departments can more easily share information and communicate with each other. [13] This will be how the proposed system will function. Each stakeholder in the system represents a 'department' and the system will integrate the jobs done by these stakeholders to complete an event's cycle. Among

the system's stakeholders are the administrative officer that will relay request for event deployment to the director and to the appropriate chairperson, the chairperson for each program that decides whether to approve a program deployment, the mission coordinator that will contact people that will be involved and the volunteers that will be the part of the event's deployment.

Enterprise resource planning systems have become a vital application and are adopted by business to manage their operations and resources. But ERP implementation faces several key challenges such as processes reengineering, IT infrastructure, integration, etc.[10] During the past few years, ERP implementation has resulted in an increase in the volume of literature devoted to it. According to a study, 70 percent of the ERP implementations fail to provide the expected benefits. In a research done to explore the current literature base of critical success factors (CSFs) of ERP implementations, the two most cited out of the 26 categories are 1) top management commitment and support and 2) change management.[11] These two factors for successfully adopting ERP are related to "misfit": the gap between pre-written functionality offered and that required by the adopting firm. This results from the customer organizations requiring unique business solutions and ERP vendors having a generic solution sold to a broad market. [12] Due to the fact that customization is expensive, organizations commit to implementing the "vanilla" version of an ERP. This is the basic version or the version with the minimum customization. Most companies installing an ERP need to adapt or even rework their processes to fit the requirements of the package. Under such circumstances, the study suggested that for a better "fit", the client firm adapting the ERP should hire a consultant that will help them re-engineer their business processes to adapt better with the ERP. The basis was that this will ensure them a more effective knowledge transfer and thus will lead to better satisfaction of

the client's needs. The proposed system, though do not anymore need a consultant as it will be tailored-fit to their business processes.

CHAPTER III

CONCEPTUAL /THEORETICAL FRAMEWORK

UGNAYAN NG PAHINUNGOD

The Ugnayan ng Pahinungod offers a number of community-oriented programs that wishes not only to help to others but also to facilitate learning to its corps of volunteers. These programs may be organized either through the initiative of one of its members or through an outside organization. At present, the program relies on social and civic organizations to reach out to communities in need on these three: health missions, the teachers' development program and health education/training. The others, namely the tutorial services, Gurong Pahinungod, Summer Immersion Service Program and the Program for the Street Children are initiated by the office.

The Emergency Room Volunteer is also initiated by the office but for some years now, it had been a year-round partnership between the office and the ER department.

MEMBERSHIP

An interested individual can be a volunteer provided that he is an affiliate of the University of the Philippines Manila or Philippine General Hospital. He is required to submit a photocopy of any proof of his affiliation with UPM or PGH, i.e. ID, form5, diploma, alumni id, etc. If he is not an affiliate, he should be a graduate of any four year course from any university. Additional requirements for non-UP affiliate are photocopy of transcript of records/ diploma, photocopy of

any valid ID, and photocopy of recent antibody for Hepatitis B or Hepatitis profile from any laboratory clinic.

FUND-DRIVEN

The programs initiated by the office are restricted by funds and therefore will not pursue without sufficient funding. The office sends letters requesting for funding to organizations and individuals that can be a sponsor to an event.

One of the fund-dependent activities is the tutorial. Previous tutorials are conducted to street children within Metro Manila but the office is planning to make it outside NCR and host it not to street children anymore but to elementary school pupils. The chairperson of the committee will create a list of candidate places for the program. Evaluation is done on each place and from there, the chairperson will choose where to deploy the program. The number of locations chosen will depend on capacity of the funding received. The same process is done on choosing locations for deployment of the Gurong Pahinungod, Summer Immersion Program and Program for the Street Children.

OCULAR VISIT

Ocular visit is done on all possible locations for any type of program, regardless if it was a requested event or initiated by the office. In ocular visits, a number of volunteers go to the location and evaluates them according to 1) safety, 2) accessibility and 3) need of service on the place. Active participation of the community is also essential for the place to be chosen. Active participation includes continuation of what the office has started doing in the place.

DUTIES OF THIRD PARTIES

The request-driven activities needs the requests in written form and should contain necessary details for the requested program. On health missions, the requesting party has the following duties:

· Coordination with the local government and/or NGOs for the information dissemination

· Recruitment of additional volunteers from local or surrounding hospitals

· Making arrangements with the local hospital/clinic for the post-operation care of patients after the mission team has left

· Close follow-up with the Pahinungod office until the conclusion of the mission

· Provision of medicines, medical and/or surgical supplies and equipments as needed

· Transportation of the mission team from the PGH to the mission area and back

· Compilation of a list of patients' data i.e. name, age, sex and pre-operative diagnosis

On the Health trainings and teachers' development, the requesting party also has the duty of 1) securing a place to conduct program, 2) transportation of the team from PGH to the mission area and back and 3) close follow-up with the Pahinungod office until conclusion of the program.

Requests are to be followed-up after three working days after submission. Requests not followed up within the said period are assumed to have been withdrawn and will no longer be entertained. Requests for surgical missions must be received at least eight (8) weeks prior to the scheduled

date of mission, while request for medical-dental missions should be received five (5) weeks prior to the mission date. Same with Health Training request which should be done five (5) weeks before. For Teachers' development, it should be done six (6) months before. [14]

The final arrangements for programs should be discussed by the requesting party with Pahinungod seven days before and two days before the scheduled date of the program. It is usually the mission coordinator that cooperates with the requesting party and other people involved in accomplishment of event. Failure of the requesting party to finalize details on the designated dates will result in cancellation of the mission.

PROCESSING OF REQUESTS

Four positions in the administrative position of the office can be given almost all the privileges to the proposed system, namely the 1) Director, 2) University Extension Specialist 1, 3) Administrative Officer 2 and 4) Chairpersons of each program since in practice they are the ones who decide which programs are to be organized. The recommendation states what other actions besides the usual is/are to be done, who to talk to, what departments to contact, etc. for the accomplishment of the program.

The administrative officer II is managing the advocacy program. In addition to this, he is the first to know about incoming requests and just relay them to the right person, which are usually the director and the chairperson for that program. The director will make his recommendations and the volunteers will carry this out. In scheduling the events, the routine is checking background of the requesting party, making ocular visit, checking availability of desired date then selecting

volunteers. For the Health Training, letters are sent to departments that have expertise on the requested subject.

For non-requested events, the process starts from choosing locations and making ocular visits on them. Letters for prospective sponsors are sent after. Then same procedure as the requested programs is done.
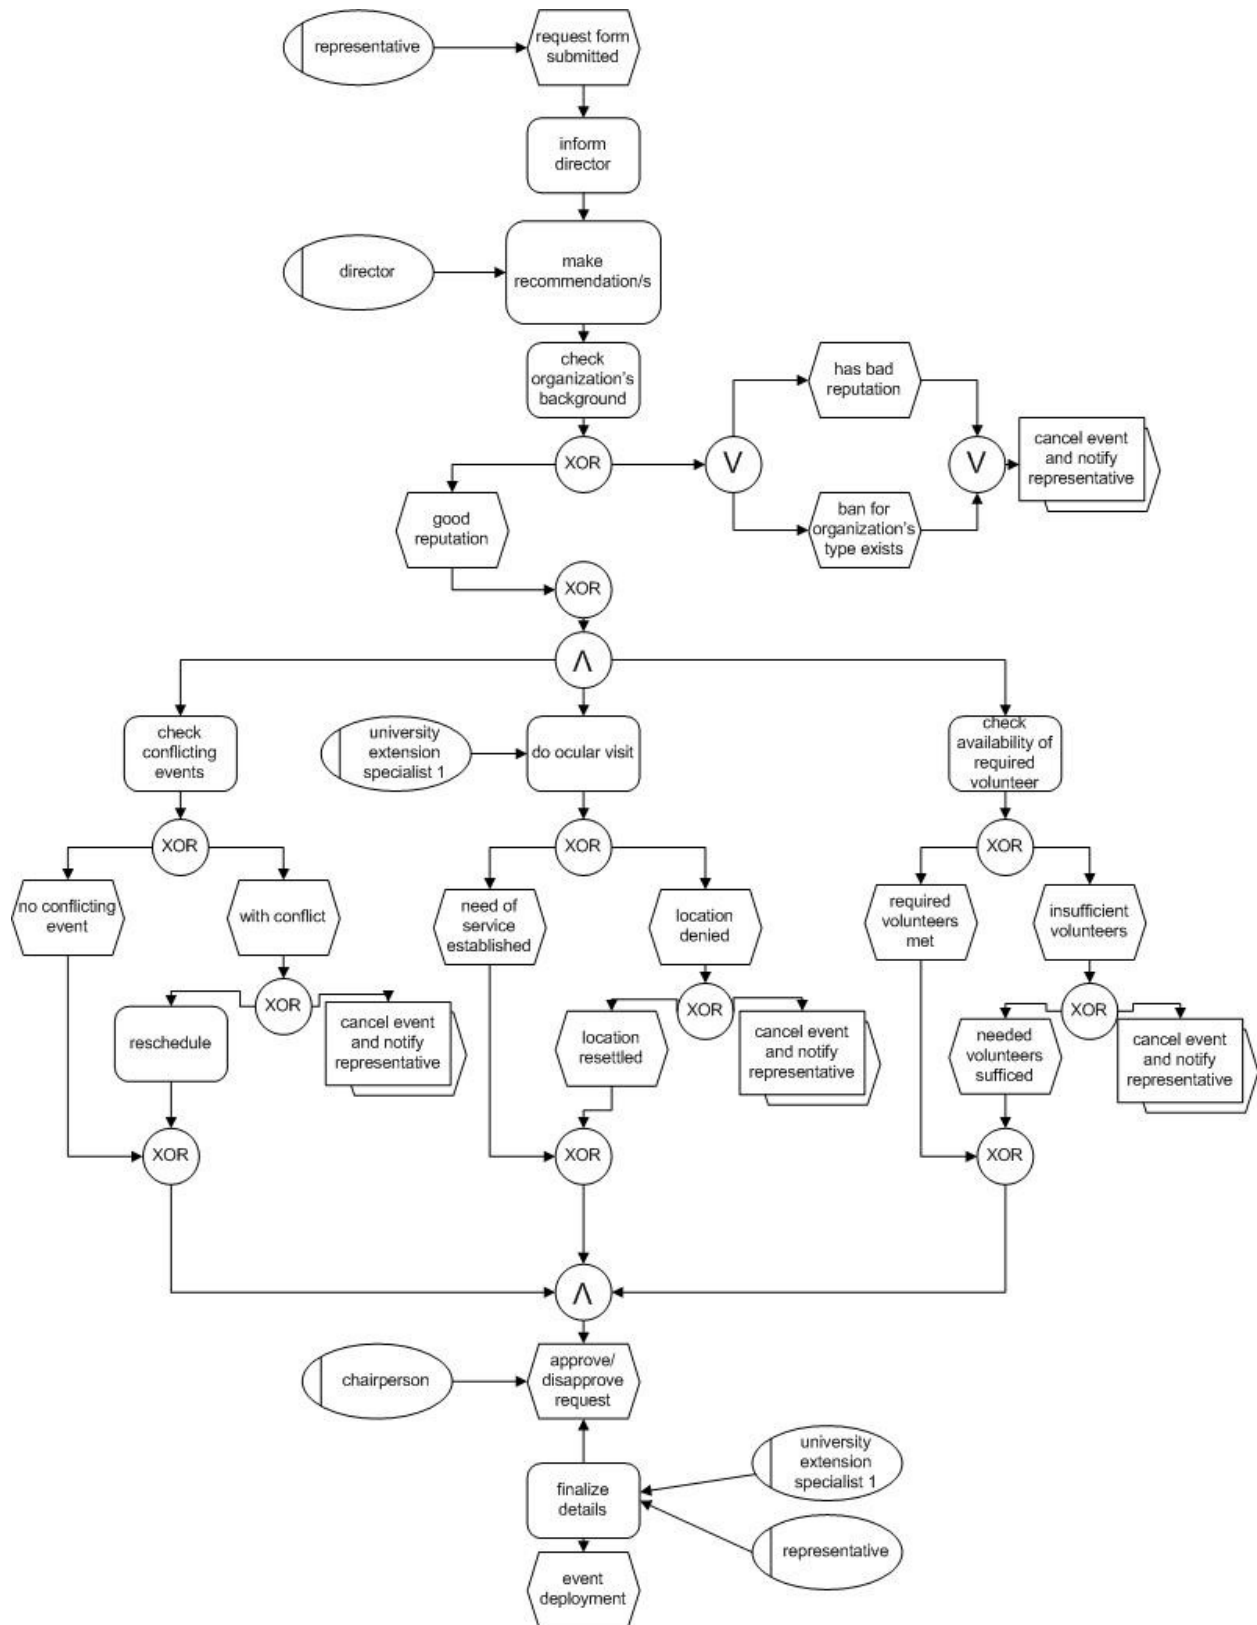

Figure 3. Event-driven Process Chain (EPC) diagram for Processing of Requested Event
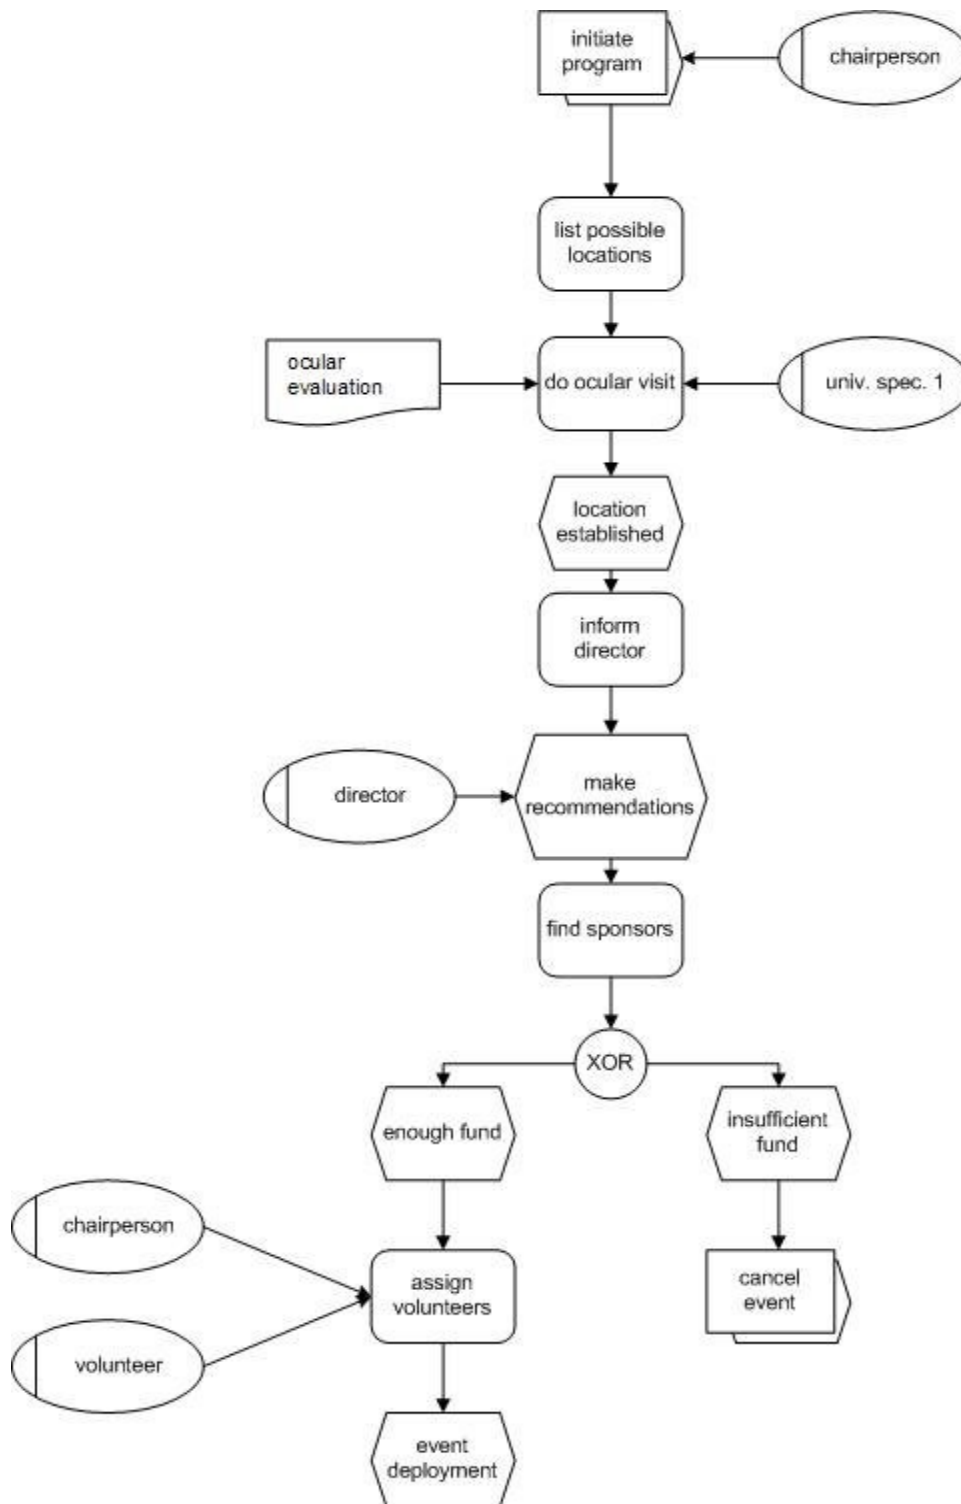

Figure 4: Event-driven Process Chain (EPC) diagram for Processing of Event Initiated by Ugnayan ng Pahinungod

The volunteers had chosen the programs they would want to be part of upon registration as member. The selected volunteers will be notified about the event. They either confirm or deny their membership on that event depending on their availability at the date of the event. If they are available, their records are checked for the forms needed for that event, if there are any. If they do not have a record, a copy of the form/s will be sent too along with other necessary documents like list of requirements. When there is sufficient number of volunteers already, the program is ready to be deployed.

AVAILABILITY OF VOLUNTEERS

Volunteers' availability for missions is determined by their free time. In some cases, volunteers adjust their schedule according to missions. This is most apparent in the cases of health missions where there are required types of volunteers. Volunteers that match the type required are informed as soon as possible because some of them have to schedule leaves on their jobs to accommodate the program. This is one of the reasons behind the week/month allowances needed upon submission of an event request.

DATABASE MANAGEMENT SYSTEM (DBMS)

A database management system is the software that allows a computer to perform database functions of storing, retrieving, adding, deleting and modifying data. [11] It provides facilities for controlling data access, enforcing data integrity and consistency, managing concurrency controlled, restoring database. Database Management Systems employ the use of a query language and report writers to interrogate the database andanalyze its data. Queries allow users to search, sort, and analyze specific data by granting users efficient access to the required

25

information. The DBMS also provides security features that protect against unauthorized users trying to gain access to confidential database information; and prevent data loss in case of a system crash. Furthermore, the DBMS is also responsible for the database's integrity, ensuring that no two users are able to update the same record at the same time, as well as preventing duplicate entries. [12]

INFORMATION SYSTEM

Information systems are the software and hardware systems that support data-intensive applications. It is made up of the database, application programs and manual and machine procedures. It also encompasses the computer systems that do the processing. The database stores the subjects of the field it is used for (master files) and its activities (transaction files). The application programs provide the data entry, updating, query and report processing. The manual procedures document how data are obtained for input and how the system's output is distributed. Machine procedures instruct the computer how to perform scheduled activities, in which the output of one program is automatically fed into another. At the end of the day or other period, programs print reports and update files that were not updated on a daily basis. Periodically, files must be updated for routine maintenance such as adding and deleting employees and making changes to product descriptions. [13]

CHAPTER IV

DESIGN AND IMPLEMENTATION

JOOMLA! INTEGRATION

The proposed system will make use of the content management system Joomla!. The information about the office can easily be published using the framework, in the form of articles.

Another of its key features is its extension ability. Developers can install extensions in form of modules and plug-ins to broaden the ability of the system. The proposed system will make use of a calendar module for a more presentable view of the programs being handled. In calendar modules, events can readily be added. This though has to be configured since details of input events are limited only to its title, start date and time, end date and time, and location. Additional information about events handled by the system will be added to the field needed to be filled-in when inputting events.

USER ACCESS

Access on certain parts of the system is restricted to certain types of user. Their privileges will be established according to what type of user they are (i.e. guest, representative, or volunteer, admin). This would mean that if a volunteer has a change in position, i.e. promotion, his privileges will automatically change along with it. With this in mind, only the administrators can change a volunteer's position. Administrators also have the permission to block/unblock a user.

The Joomla! Framework provides user management. Restrictions can be done by assigning a user group to a user. Each user group has its own set of privileges. Though the user groups

available in the core of Joomla! don't fit the user groups needed for the system, it can be configured. The proposed system can use the framework's way of assigning user privileges by customizing the user groups.

EVENT / PROGRAM LIFECYCLE

Different programs have different set of tasks to be accomplished. The system will monitor an event's lifecycle by keeping record of the accomplished tasks for that event. For each type of program, the generic steps that are needed to be accomplished will be stored in the system and will be rendered to the administrator as a checklist. There will only be differences between events of the same type when there are recommendation/s received from the director.

Recommendations are additional tasks that should be done to make the event possible, i.e. contact the Department of Education, coordinate with the different department heads involved, etc. These recommendations are the main source of the tasks for that event. Status of the tasks can either be done/not yet done. The tasks will be set as links leading to further details about that task.

The same functionality of adding tasks to be accomplished can be done by an administrator. This can be the case when the director gives additional instructions verbally.

ORGANIZATION

Information about the third party organizations will be entered by the representatives. A representative will also have privilege of editing information on the sponsor's profile. Incurring a bad reputation will be reflected on the profile of the organization.

FUND MONITORING

For office-initiated programs, there will always be a fund solicitation done. Under the task of finding sponsors, an estimated cost will have to be keyed-in. The list of sponsors who responded to their requests should be entered with the corresponding amount they are willing to give. The system will then show a comparison between the estimated cost and the accumulated funding as either sufficient or insufficient. If insufficient, the amount needed will also be displayed.

REPORT GENERATION

Annual and monthly accomplishment reports can be generated from the system. Monthly reports follow the pattern of the present monthly accomplishment report. Annual report will show the statistics and compiled accomplishments for a given year.

MISSION SPECIAL CASES

Professional volunteers are requested to input the profession they are in. This is for event assignment purposes. The event organizer will find volunteers with the required profession based on his profile data. The same will be true on the system since the same exact form data will be stored.

SITE MEMBERSHIP APPROVAL

After users has successfully filled a form, they have to show up to the Pahinungod office and bring original copies of required documents to verify their identity and affiliation. The representatives on the other hand also have to initiate personal contact with the officer personnel before their membership be approved.

CONTEXT DIAGRAM
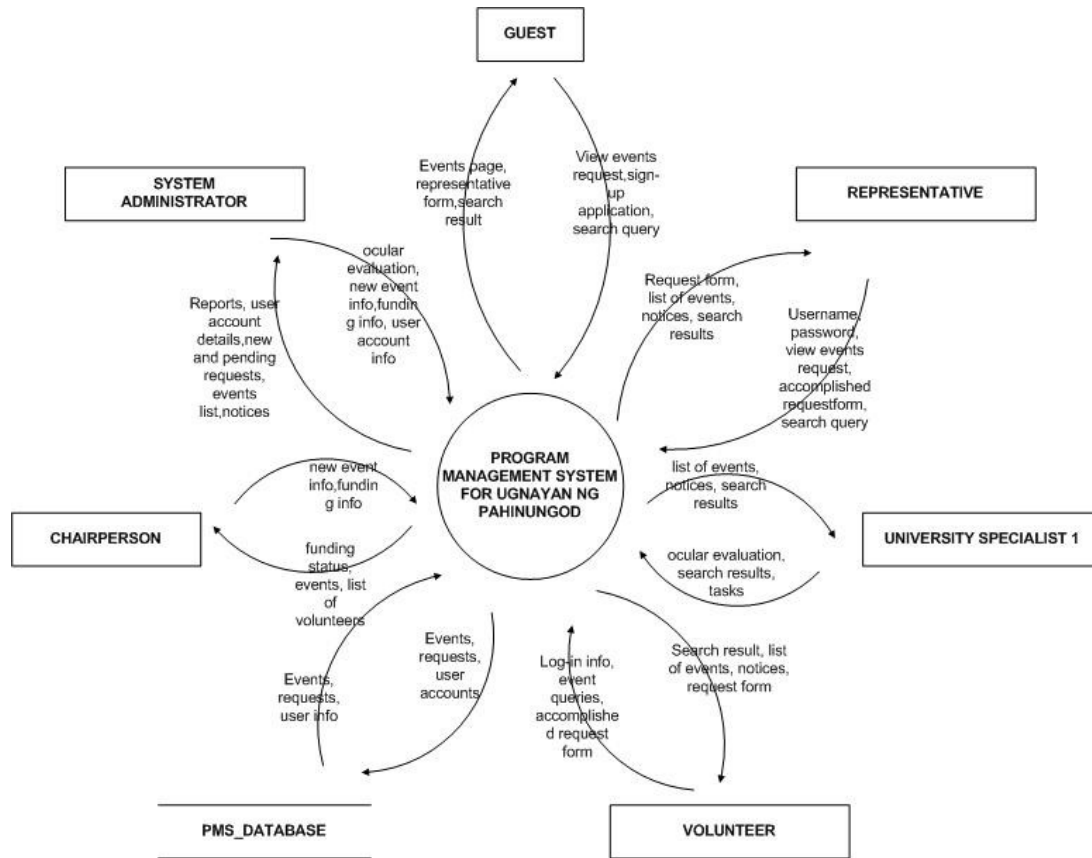

Figure 5: Context Diagram

The system's context diagram is shown on figure 5. There will be technically 7 users in the system: guest, representative, ordinary volunteer, university extension specialist 1, chairperson and the system administrator. The system administrator will have all the privileges. The director is also a system administrator. The chairperson will have the privileges of a volunteer plus the capability of adding/ deleting events, approving/ disapproving events and assigning volunteers. The university extension specialist 1 will have the privileges of a volunteer plus the ability to make ocular evaluation. A volunteer will have the capability of viewing event details including list of volunteers joining an event, searching and requesting for event (as representative). A representative on can do what a guest user can do plus request an event deployment. The guest

users will have the viewing and searching capability on events, representatives and organizations.

TOP LEVEL DATA FLOW DIAGRAM
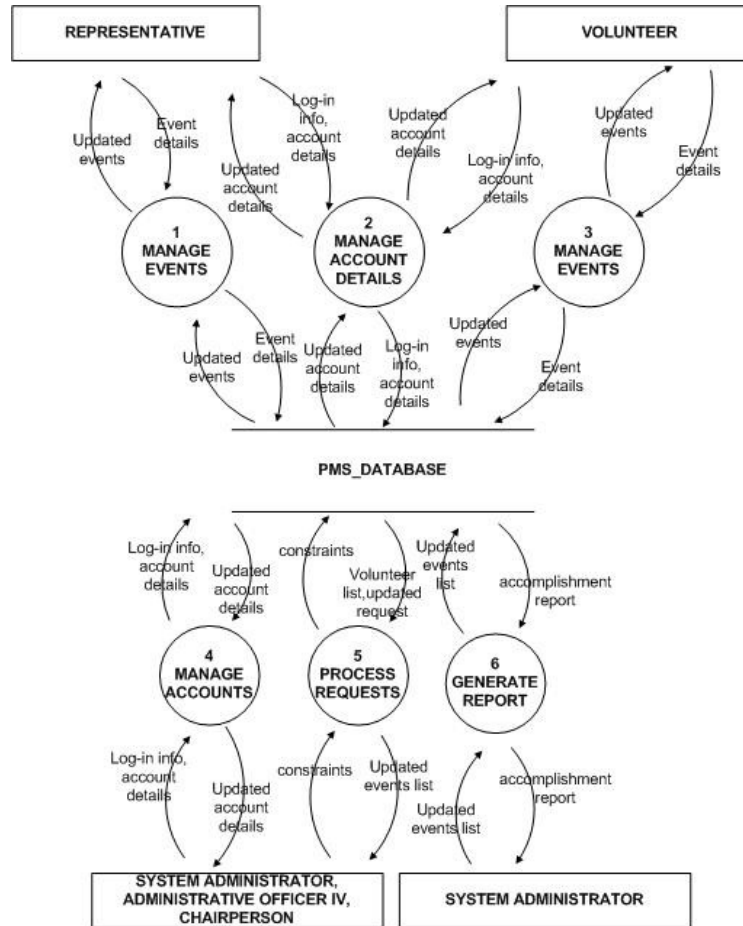

Figure 7: Top Level Data Flow Diagram

The Top Level Data Flow Diagram is shown on Figure 7. The processes indicated are the functionalities that the users are allowed to perform. Not shown in the diagram is the need for logging in into the system before access is allowed.
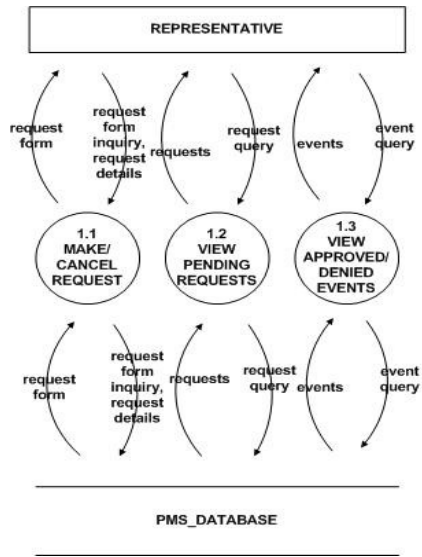

Figure 8: Sub-explosion of Process 1: Manage events (Representative)

Shown in Figure 8 is the sub-explosion of the process Manage Event for Representative account. A representative can make a request and can also cancel it. View for pending requests will also be shown on representative's page. Notifications received by the representative will allow him to view his approved/ denied requests.
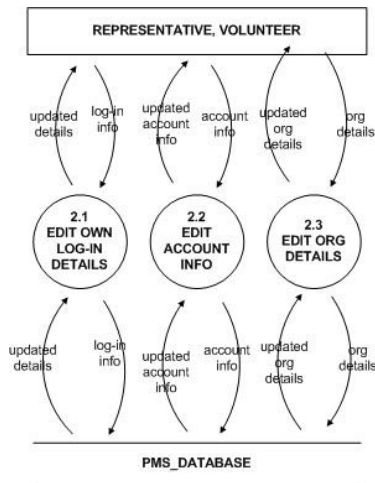

Figure 9: Sub-explosion of Process 2 : Manage Account (Representative and Volunteer)

A representative can change his login and account information. Representatives are the contact persons for a specific organization. He is then granted the privilege of editing the details about

his organization. Storing the company profile is mainly for verifying the reputation of the company, i.e. they have a bad record in Pahinungod. It is also important to take note of an organization's type. In certain periods such as election period, missions with politics-related organizations are prohibited by the law.
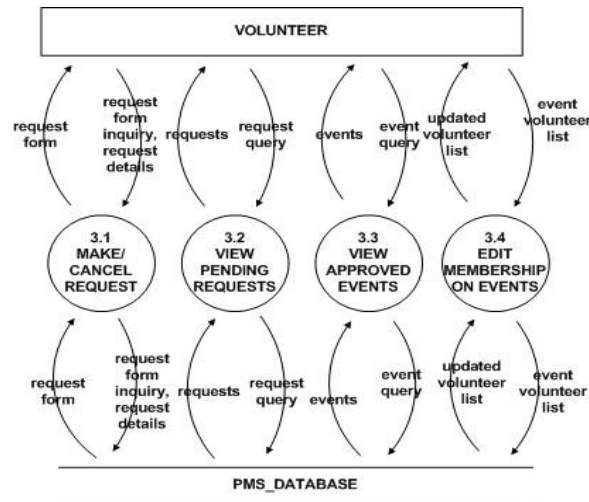

Figure 10 : Sub-explosion of Process 3 : Manage Events (Volunteer)

Volunteers are given the privilege of changing their account information. If they are also representatives for organizations other than the Ugnayan ng Pahinungod, they will also have the privilege of making requests. They will be allowed to view their requests. As volunteers, they will be invited by the administrators to join events. The notification that they will receive alongside the event details is the instruction on how to confirm or deny joining the event.
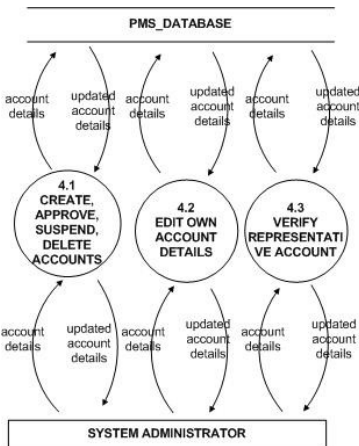

Figure 11: Sub-explosion of Process 4 : Manage accounts (Administrator)

The administrator uses all the functionalities of the system including creation of accounts, suspending a user and deleting a user. The representative accounts will have an icon that will indicate if it was verified or not. This is to ensure reliability. If an account is verified, the administrator had already proven in some way, i.e. physical meet-up, that the representative is who he says he is.
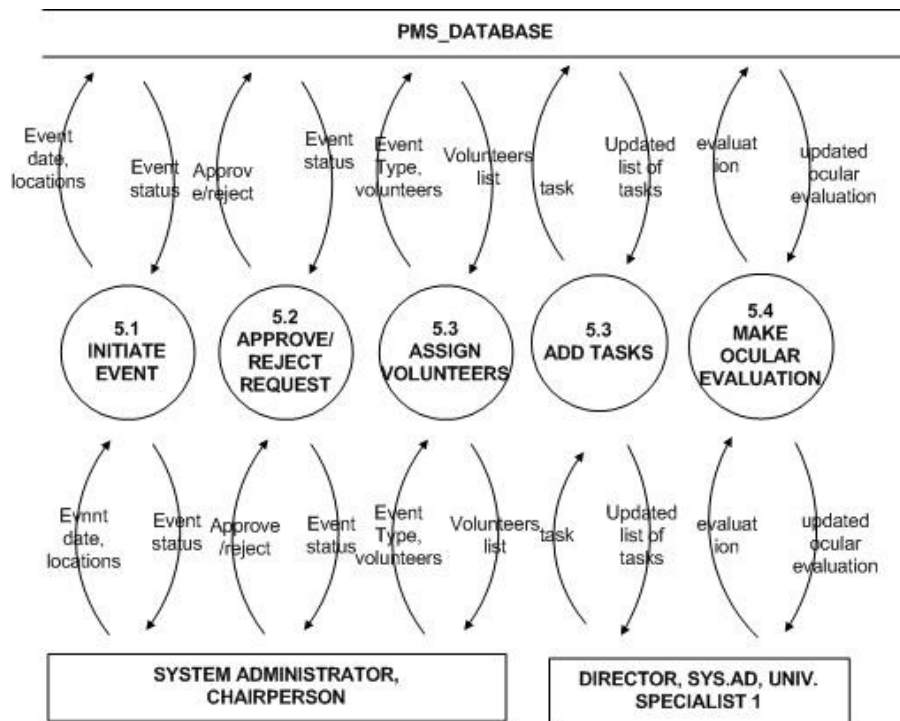

Figure 12: Sub-explosion of Process 5 : Process Events

34

The processes shown are the processes involved in the processing of a request and the users who are allowed to do it. Initiate event involves setting a date for the event and keying-in the suggested locations. For both the initiated and requested events, the next step will be to inform the director and get additional tasks to accomplish. Then the administrator or the chairperson will just click a link to view the status of tasks in an event. If all the tasks are done, it will show the details needed for approving the event namely: approved/disapproved location, available/conflicting date, names of volunteers, and/ or funding sufficiency/insufficiency. It will then be up to the chairperson to decide if he will approve or disapprove based on the presented data.
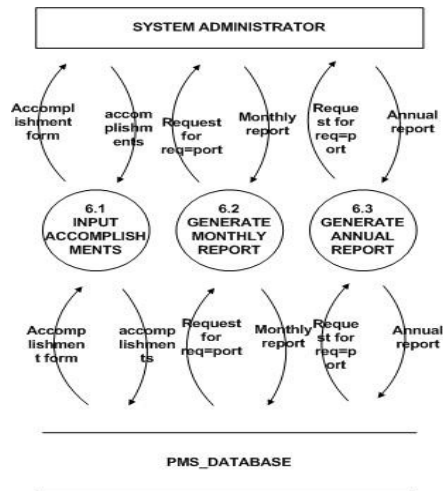

Figure 13. Sub-explosion of Process 6: Generate Reports

The administrator can input event accomplishments and generate monthly and annual reports derived from them.

ENTITY-RELATIONSHIP DIAGRAM
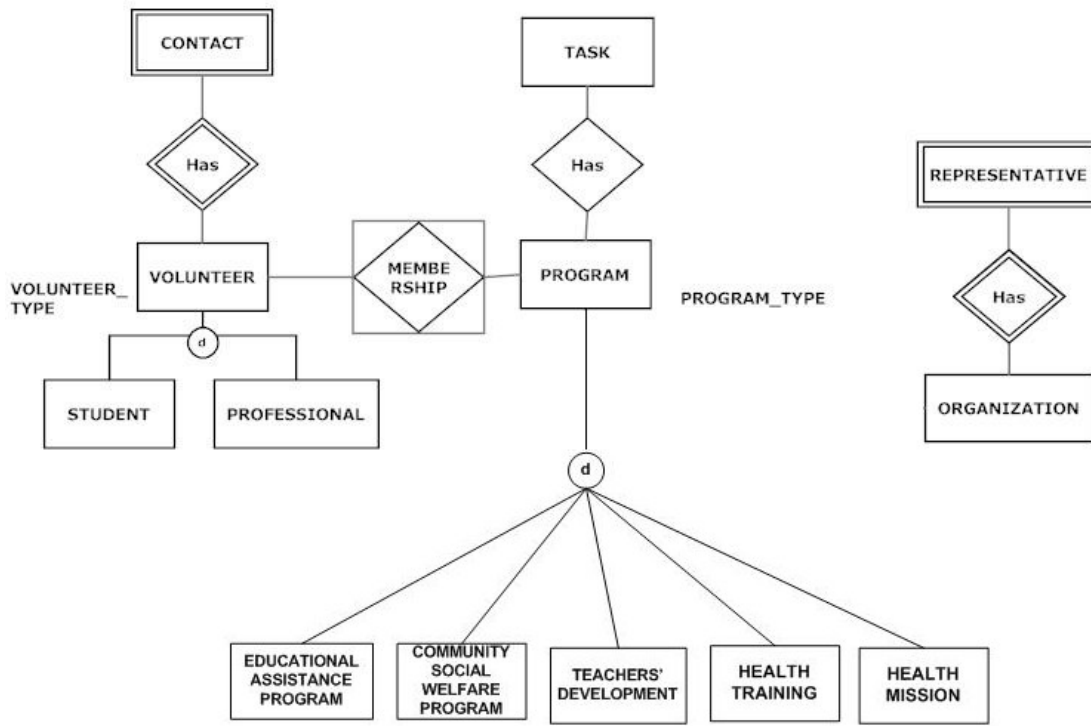

Figure 14: Entity Relationship Diagram

The entity relationship diagram for the proposed system is shown on Figure 6. There are four main entities: volunteer, organization, program and task.

A volunteer can either be a student or a professional. And a volunteer has one contact person, in case of emergency. He can join one or more programs.

A program should be one of its subtypes: initiated or requested. An initiated program can be Summer Immersion, Program for the Street Children, tutorial or Gurong Pahinungod. A requested program on the other hand can be a Teachers' Development Program, Health Training or Health Mission. A requested program is requested by a partner organization. And each organization has a representative.

A program can have many tasks.

DATA DICTIONARY

jos_accomplishments_ervp – stores the accomplishments for ERVP

Event_ID	numeric	Event id
Level	enum	1st,2nd,3rd
Patients	numeric	Number of patients catered
Departments	string	Department assigned for each level

jos_accomplishments_gp– stores the accomplishments for Gurong Pahinungod

Event_ID	numeric	Event id
Academic_year	string	School year the volunteers will serve
Batch	numeric	Batch number of the group deployed

jos_accomplishments_hm– stores the accomplishments for Health Mission

Event_ID	numeric	Event id
Medical_cases	numeric	Number of medical patients catered
Dental_cases	numeric	Number of dental patients catered
Minor_surgical	numeric	Number of minor surgical patients catered
Major_surgical	numeric	Number of major surgical patients catered

jos_accomplishments_sisp– stores the accomplishments for Summer Immersion Service Program

Event_ID	numeric	Event id
Vol_ID	numeric	Volunteer id
Loc_ID	numeric	id of the location the volunteer was assigned to

jos_accomplishments_tut– stores the accomplishments for Tutorials

Event_ID	numeric	Event id
Program	numeric	Tutorial program
Term	numeric	Term the volunteers served
Academic_year	string	School year volunteers served

jos_allow_multiple_locations – stores the events and if they have allow multiple locations

Event_ID	numeric	Event id
Multiple_loc	Numeric	Loc_ID

jos_archive_article – stores which articles are assigned to an event

created_by	numeric	User id
article_id	numeric	Id of the article
Event_ID	numeric	Event ID
Catid	Numeric	Category id

jos_attachements– stores article downloadables

id	Numeric	Attachment id
filename	String	Filename of attachment
filename_sys	String	File location
file_type	String	File type
file_size	Numeric	File size
url	String	URL of file on the system
uri_type	String	URI type
url_valid	Boolean	If url is valid
display_name	String	Display name of attachment
description	String	File
icon_filename	String	Filename of attachment icon
uploader_id	String	ID of uploader
published	Boolean	If published or not
parent_id	Numeric	Article id
create_date	Datetime	Date and time attachment was uploaded
modification_date	Datetime	Date and time attachment details was modified
download_count	Numeric	Number of times attachment was downloaded

jos_batch_membership – contains which volunteer belongs to a gp batch

Vol_ID	numeric	Volunteer ID
Batch	numeric	GP Batch Number

jos_beneficiaries- stores institution name and number of beneficiaries for an event

Event_ID	numeric	Event id
Institution	string	Name of benefiting institution
Num_of_attendees	numeric	Number of attendees

jos_comprofiler – stores details about the user

Id	numeric	Unique id
user_id	numeric	User ID from jos_users table
firstname	string	First name
middlename	string	Middle name
lastname	string	Last name
hits	numeric	Number of profile views
message_last_sent	string	Timestamp when user sent last message
message_number_sent	numeric	Number of messages sent
avatar	string	file path of the user's

		avatar
avatarapproved	boolean	Avatar approved or not
approved	boolean	User approved or not by an administrator
confirmed	boolean	User clicked link sent to mail or not
lastupdatedate	timestamp	Last date the user edited profile
registeripaddr	strng	User ip address
cbactivation	string	Activation code for a new user
banned	boolean	If user is banned or not
banneddate	timestamp	Date when user was banned
unbanneddate	timestamp	Date user was unbanned
bannedby	numeric	Id of user who banned the profile
unbannedby	numeric	Id of user who unbanned the profile
bannedreason	string	Reason for banning profile
cb_usertype	string	usertype
cb_mobilenumber	numeric	Cellular phone number of the user
cb_nickname	String	Nickname of user
cb birthday	string	Birthday, Format: [Month number Date, Year]
cb_civilstat	String	User's civil status
cb_gender	enum	Male or female
cb_bloodtype	enum	A, O, AB, B
cb_religion	string	religion
cb_presentaddress	string	Present address
cb_permanentaddress	string	Permanent address
cb_upaddiliation	Enum	Yes or No (UP Affiliation)
cb_specialskill	string	skills
cb_hobbies	String	hobbies
cb_volunteertype	enum	Student or professional
cb_orgname	string	Name of organization
cb_position	string	Position on organization
cb_orgtype	string	Organization type
cb_programname	string	Name of program
cb_prclicenseno	numeric	PRC license number
cb_department	string	Department user is working/ studying in
cb_officecontactno	string	Office contact number
cb_profession	String	Profession of the user
cb_otherprofession	string	Other profession
cb_studentno	string	Student number

cb_course	string	Student's course
cb_college	string	College
cb_yearlevel	string	Ordinal number of year level
cb_school	string	school
cb_cfirstname	string	Contact Person's first name
cb_clastname	string	Contact Person's last name
cb_cmiddlename	string	Contact Person's middlename
cb_relationship	string	Relationship of contact person to user
cb_contactno	string	Contact number of the contact person
cb_address	string	Contact Person's address
cb_alumnus	enum	Alumni? Yes or No
cb_campus	string	Campus, if alumni
cb_graduation	Numeric	Year of graduation

jos_cswp – stores the additional fields for Community and Social Welfare Programs

Event_ID	numeric	Event id
Estimated_cost	numeric	Estimated cost of event
Service	Enum	'Program fpr the street children' or 'Summer Immersion'
Accumulated	numeric	How much dun is already accumulated

jos_eap– contains further details about an EAP event or request

Field Name	Data Type	Description
Prog_ID	Numeric	Program ID Primary Key
Subject	String (required)	Program's target subject
School	String (required)	Program's target school
Service	Enum (required)	Tutorial or Gurong Pahinungod

jos_ervp_attendance – contains attendance of ervp volunteers to debriefing, feedback, orientation and training

Field Name	Data Type	Description
Event_ID	numeric	Event ID
Vol_ID	Numeric	Volunteer ID
Orientation	Enum	-1 - pending 0 – did not attend 1 - attended

Training	enum	-1 – pending
		0 – did not attend
		1 – attended
More_trainings	Varchar	Collection of enum separated by '|',
		-1 - pending
		0 – did not attend
		1 - attended
Deployment	enum	-1 - pending
		0 – did not attend
		1 - attended
Feedback	enum	-1 - pending
		0 – did not attend
		1 - attended
Debriefing	enum	-1 - pending
		0 – did not attend
		1 - attended

jos_ervp_level   - stores on which level an ervp volunteer has achieved

Field Name	Data Type	Description
Vol_ID	Numeric	Volunteer ID
ERVP_level	Enum	Levels: 1,2 or 3

jos_events   - stores details about events common to all categories

Field Name	Data Type	Description
id	Numeric	Event ID
catid	numeric	Event Category ID
title	string	Title of event
content	string	Description of event
adresse_info	string	Venue of event
extra_info	string	Additional details of event that are not fit for other fields
coloruseCatColor	boolean	If to use category color
state	boolean	If published as private (0), public (1) or archive (-1)
created	datetime	Date and time event was created
created_by	Numeric	User ID
created_by_alias	string	Username of creator
modified	datetime	Date and time event was modified
modified_by	numeric	User ID
publish_up	datetime	Start date of event

publish_down	datetime	End date of event
alldayevent	boolean	If event is an all day event
participants	numeric	Expected number of volunteers needed
Estimated_cost	numeric	Estimated cost of event
has_report	boolean	If has report
etype	string	What program type
Accumulated	numeric	Accumulated funds
Admin_in_rep_of	numeric	Representative ID when an admin created the event and assigned to a representative
Multiple_loc	boolean	If multiple locations

jos_events_categories – contains event categories and details about each

Field Name	Data Type	Description
id	Numeric	Event Category ID
color	string	Hexadecimal representation of category color
name	string	Category name

jos_extra_reports – contains extra reports about an event

Field Name	Data Type	Description
Event_ID	Numeric	Event ID
Extra_report	string	Additional report
Date_submitted	timestamp	Date and time additional report was input
Reporter	Numeric	User ID
Date_modified	datetime	Date and time report was modified
modifier	Numeric	User ID

jos_funding- contains information about funding on an event

Field Name	Data Type	Description
Event_ID	Numeric	Init_prog_ID Primary Key
Sponsor_name	String (required)	Name of sponsor
Amount	Numeric (required)	Amount

jos_health_mission - contains further details about a health mission event or request

Field Name	Data Type	Description
Event_ID	Numeric	Program ID Primary Key
Status	Numeric (required)	1 followed-up 2 confirmed

		3 finalized
No_of_patients	Numeric (required)	Estimated number of patients to be seen
Area_population	Numeric	Population of the area
Health_problem	String	Any health problem particular to the community to be visited
Service	Enum (required)	Dental, medical, dental-medical, surgical
Org_ID	Numeric (required)	ID of requesting org
Date_submitted	Date (required)	Date request was submitted
Assistance	string	Kind of assistance representative can provide
Expectation	String	Expected help from Pahinungod

jos_health_training- contains further details about a health training event or request

Field Name	Data Type	Description
Event_ID	Numeric	Program ID Primary Key
Subject	string	Topic to be taught
Num_of_participants	numeric	Estimated number of participants to be taught
Org_ID	Numeric	ID of organization
Participant_type	String	Type of participants
Assistance	string	Kind of assistance representative can provide
Expectation	String	Expected help from Pahinungod
Date_submitted	Date (required)	Date request was submitted

jos_location – contains information and general evaluation of a location

Loc_ID	numeric	Location ID
Location	String	Location
Safety	enum	-1, 0,1
Accessibility	enum	-1, 0,1
Need_of_service	enum	-1, 0,1
Gen_comment	string	General evaluation
A_date_start	date	Start date of ocular evaluation
A_end_date	date	End date of ocular evaluation

jos_location_membership – stores which location is assigned to an event, along with its evaluation

Event_ID	numeric	Event id
Program	numeric	Tutorial program
Term	numeric	Term the volunteers served

jos_major_surgical – contains number of patients operated for a major surgery case

Event_ID	numeric	Event ID
Case_num	String	Number of catered patients for surgery case
Case_name	String	Major surgery performed

jos_membership - contains records of volunteers' assignment to events

Field Name	Data Type	Description
Event_ID	Numeric	Event's ID Composite Primary Key (1) Foreign Key from table EVENT
Vol_ID	Numeric	Vounteer's ID Composite Primary Key (2) Foreign Key from table VOLUNTEER
Status	Enum	If pending, joining, not joining
Deployed	boolean	If deployed or not
Is_staff	boolean	If member of staff when event took place
Remarks	string	Additional Remarks

jos_organization - contains information about partner organizations

Field Name	Data Type	Description
Org_ID	Numeric Auto Increment	Unique organization ID Primary Key
Org_name	String (required)	Org's Name
Sec_reg_no	Numeric	Org's Sec. Registration Number
Org_type	String (required)	Organization type
Tel_no	Numeric (required)	Org's telephone number
Fax_no	Numeric (required)	Org's fax number
Email_address	String (required)	Org's email address
Office_address	String (required)	Org's office address
HO_address	String	Head office's address
HO_tel_no	Numeric	Head office's telephone number
HO_fax_no	Numeric	Head office's fax number

HO_email_address	String	Head office's email address

jos_party_membership – stores users who are affiliates of an organization outside Pahinungod

Org_ID	numeric	Organization id
Rep_ID	numeric	Id of the user
Status	enum	Rejected, Pending, Approved
Position	String	Position in the organization

jos_preferred_program – keeps track of volunteer's preferred programs

Field Name	Data Type	Description
Volunteer_ID	Numeric	Volunteer ID
Preferred_prog	Enum	Volunteer's preferred program Tutorial Service, Teachers' Development, Gurong Pahinungod, Health Mission, Health Training, Health Education, Emergency Room Volunteer, Summer Immersion Service, Program for the street Children, Advocacy Program

jos_profession – stores profession of volunteer

Field Name	Data Type	Description
Volunteer_ID	Numeric	Volunteer ID
profession	Enum	'Physician', 'Pediatrician', 'Surgeon', 'Anesthesiologist', 'OB-Gyne', 'Anesthesia Technician', 'Pharmacist', 'Nurse', 'Dentist', 'Faculty Member', 'Employee', 'Other'
Other	string	Other profession

jos_recommendation – stores director recommendations

Field Name	Data Type	Description
Event_ID	Numeric	Event ID

Recommendation	String	Recommendation
Date_created	timestamp	Input date and time of recommendation
Uploader	numeric	User ID
Uploader_username	string	Username of uploader
Date_modified	datetime	Date and time recommendation was modified
Modifier	numeric	User id
Modifier_username	string	Username of modifier

jos_request – stores details about a request

Field Name	Data Type	Description
Event_ID	Numeric	Event ID
Event_title	String	Title of Event
Rep_ID	numeric	Representative's ID
Org_ID	numeric	Organization's ID
Date_created	timestamp	Input date and time of request
Date_processed	datetime	Date and time request was processed
Status	enum	'Pending', 'Approved', 'Rejected', 'Acknowledged', 'Cancelled'
Comments	string	Comments upon acknowledgement or rejection

jos_signups – stores users who signed up for an event

Vol_ID	numeric	Volunteer ID
Event_ID	numeric	Event ID
Date_queued	timestamp	Date use signed up
Date_acknowledged	timestamp	Date acknowledged by admin
Status	string	Status of signup
Remarks	string	i.e. Reason why rejected
Deployed	boolean	If user was deployed

jos_staff – stores office staff and their administrative position

Vol_ID	numeric	User ID
Position	string	position
Remarks	string	Category if coordinator or chairperson

jos_users – stores account login info of user

id	numeric	User id
name	string	User's full name
username	string	User's username
email	string	User's email address
password	string	password
usertype	string	Type of user
block	boolean	If user is blocked from login
sendMail	boolean	Send admin emails?
gid	numeric	Group id
registerDate	timestamp	Date user registered on the system
lastvisitDate	timestamp	Date user last logged in
ac		

jos_task– stores event and miscellaneous tasks

Task_ID	numeric	Task id
Event_ID	numeric	Event ID
catid	numeric	Category id
User_ID	numeric	ID of creator
Description	string	Task title
Status	boolean	Status of task, if done or not yet done
Instruction	string	Task instructions
Partner	string	Partner on task
Accomplishment	string	Task Accomplishment
publish_up	date	Start Date when task was accomplished
publish_down	Date	End Date when task was accomplished
MonthOnly	boolean	If no specific date on task accomplishment
Location	string	Location where task was accomplished
ERVP	boolean	If an ERVP task
Report_user_ID	numeric	Accomplishment Reporter's user ID

jos_tdp_attendees– stores number of tdp attendees

Event_ID	numeric	Event ID
Attendees	numeric	Number of attendees from a school
School	String	School

jos_tdp_attendees– stores details about teacher development event request

Event_ID	numeric	Event ID
Date_submitted	timestamp	Date request was submitted
Number_of_participants	numeric	Number of participating teachers
Number_of_participating_institutions	numeric	Number of participating schools/institutions
Org_ID	numeric	Partner Organization
Subject_area	string	Subjects
Participant_type	string	Type of participants attending
Assistance	String	Kind of assistance they can provide
Expectation	String	Kind of help that they want from Pahinungod
Count_type	enum	'count' or 'breakdown': count if only total count of participants are available, breakdown if participating schools/institutions are available

TECHNICAL ARCHITECTURE

Architecture: Web Client-Server

The system will be deployed to the official server of the University of the Philippines Manila.

Minimum requirements for the major server-side and client-side components are given:

Client:

Hardware:

An Internet Connection

Software: any modern (major) web browser (Firefox, IE, Opera, Safari, Chrome) that supports javascript and / or has it enabled

Server:

PHP 4.3.10 or higher

MySQL 3.23.x or above

Apache 1.3 or above

At least 1GB available extra disk space for application data

Joomla!

DEFINITION OF TERMS

1. Program

Programs are generic term for the activities that is offered and/or deployed by the Ugnayan ng Pahinungod. When requests for programs are processed and deployed, they will be termed as events.

2. Mission

Mission refers to any of the health missions under Community Health Program package; can be medical, dental or surgical.

3. Sponsor

A sponsor is an outside organization that is willing to provide funding for a program.

4. Partner

A partner is a third party organization that requests for deployment of a program to a desired area. They will be closely working with the office until the conclusion of the program.

5. Push

Pushing (data to a user) term in computer science that pertains to system's action of taking information from its database and rendering it to the user.

6. PGH

PGH stands for Philippine General Hospital and is where the office of the Ugnayan ng Pahinungod is located. It is often the pick-up and drop-off point of volunteers when they are deployed on a mission.

CHAPTER V

RESULTS

Figure 15. Home

The PDMS Homepage provides an introduction to the organization, stating the origin

of the organization and their logo to briefly but wholly state the purpose that they

want to fulfill. It also provides menu for easy navigation of the users. The latest

events and news are also put into the homepage to facilitate dynamism and website "stickiness" along with the Login and Who's Online sections.

Figure 16. Search Section

Figure 17. Search Results

The search tool searches the whole website of what the user might want to know including articles, events and third party organizations that are involved in the missions of the organization.

Manage Staff

Figure 18. Manage Staff Page which controls User Access

There are different levels that an office staff can manage. The Director will have access to everything being the highest in the officer hierarchy. But since **Administrative Officer II** is the one responsible for all office records and he is also given the access to all the functionalities of the application. The **Administrative Officer IV**, being the one responsible for fund management in the office will have access to the management of the fund records for the events. The **chairperson**, having the decision of foregoing with the event or not will have the capability of creating events, approving or disapproving events and also volunteer and resource management. The **event coordinators** are the ones getting in touch with the people involved, and thus is granted the privilege of controlling invitations and recording fund accumulations from sponsorships.

The site access and privilege depends on the position of a member and control of which is given to the Administrative Officer II.

Teachers Development Program

Event Summary and Statistics	
Category	Teachers Development
Partner	Tacurong Pilot Elementary School
Venue	Brgy. Poblacion, Tacurong City, Sultan Kudarat
Date	May 08 - 13, 2011 at 8:00am - 5:00am
Number of participants	75
Type of participants	public elementary school teachers
Estimated expenditure	PhP 5000
Volunteers needed	10
Committed volunteers	No confirmed volunteers yet. [Sign-up]
NOTE: This event is viewable for registered members only as some factors (funds, volunteer availability, location evaluation, etc.) are still being polished.	

Back

Figure 25. Event Details Page for Volunteers

A wide description section is provided to be able to provide room for artistic and strategic advertising of the events. A summary of the details for quick viewing is available to the possible volunteers of the event, which are the members of the site. Some event will be published and made visible only to members and thus only the members of the site will have access to them. The **volunteers** can control the events they will be attending in. The **representatives** will have access to their requests.

Figure 27. Event Tasks Management Page – Director's Recommendation

Usually there are four aspects that the chairperson will consider to say go for the event. These are enough volunteers, enough funds, and if the location is found well-suited for the event. These are compacted into one page which provides an overview of all the four aspects. The recommendation would be coming from the director and will be the tasks that the office staff and volunteers will have to accomplish so that the event may successfully pursue.

Figure 34. Accomplishment Form (ERVP)

Report Generation

- Annual Report

Year: 2011

- Monthly Report

Figure 35. Report Generation Section

70

The accomplishments are input on forms like on Figure 34. There are two main reports generated by the system - the annual report and the monthly report. The data are derived from these accomplishment reports. The monthly report is patterned on the monthly report made by the office that details the events deployed and tasks accomplished for the month chosen. The annual report is patterned on the annually released book of the organization which summarizes the accomplishments of the organization for the whole year.

CHAPTER VI

DISCUSSION

The system provides easier ways of report generation. The monthly report is a compilation of records done by each coordinator. This report includes the events successfully deployed that month and the tasks accomplished for each event grouped according to their program type. Along with the tasks is the time, date and place where it took place, partners who helped in the accomplishment of the tasks and the report on what actually took place. Along with the events are the details of the actual event: location, date, place, funds accumulated, sponsors, actual number of volunteers who attended, total number of beneficiaries and their breakdowns.

The annual report on the other hand provides the summary of the accomplishment of the organization for the whole year. It serves as an outline of the accomplishments with the events that took place grouped according to their program type. The calculated total number of beneficiaries and their breakdown, total volunteers who took part in that program, the locations reached and the sponsors and donors who helped and made it possible for the organization to reach out more communities.

The system provides also an easy quick summary page of the status of an event request or events that are still in the planning stage on the events task management page. The page utilizes the organizational benefit of writing down and to aid in the decision making and successful planning of the event. They can now see on which part of the event should they focus more as this page displays the summary of each aspect, and a list of what tasks are still to be done.

The users can apply as a registered volunteer or a representative of a third party organization. When the application is approved, they can request for events.

72

The volunteers can also manage the events that he or she will be attending. The feed that shows on the users' dashboard is also customized, following the user's program preference and showing only the upcoming programs that are of his interest [which he initially set up upon registration and can anytime be updated].

The system provides information on what kind of organizations are taking part in the events. It also provides a more convenient and direct way of expressing interest for third party organizations to make an event possible. The ability to see which organizations are already part of the missions can give a sense of confidence to the third parties on the organization.

The web-based management system provides effective means of information dissemination and helps boost publicity as it provides a wider audience as opposed to personal face to face campaign. The system takes facilitating the volunteers' passion to share their advocacy to the next level as the system shows the accomplishments of the past events and how it benefitted their less fortunate counterparts.

CHAPTER VII

CONCLUSION

PDMS is a web-based system that can be a useful application for the Ugnayan ng Pahinungod in achieving their mission. The website provides a broader range of possible volunteers and third party organizations or willing individuals who shares the same advocates.

The website helps the events chairpersons by giving a more organized perspective of the things they should think about. Instead of being busy thinking of things that they might have missed, they can focus more on each of the aspects and clearly mark out which things were already done and which needs more attention.

The site helps in instilling the volunteerism to its users, both volunteers and outside parties, as it provides all the means and resources that they might need to start up. And boost the already existing calling to the volunteers as they see how each event changes the lives not only of their colleagues but more so of the people they have helped. Thus helping the organization in its mission to reach and benefit more people.

CHAPTER VIII

RECOMMENDATION

The Program Deployment Management System may be better if additional categories can be catered. The system could make use of the capability of having customized fields on the events page for each new category just as the existing categories have different fields for each. It should also automatically reflect on the report and staff positions and program links on the homepage.

The PDMS can also make use of improved scheduling, improved interface for events, and possible integration with billing systems. On the improved scheduling, functionality of asking for volunteer's free time and employing automatic scheduling of the volunteers according to the event date which matches their program preference and their input free time.

Since the incoming funds for the events are monitored, outside billing systems could be integrated with it. There could be a functionality such that expenses incurred could be imported by the system and thus be monitored.

CHAPTER X

APPENDIX

A. University of the Philippines Manila Ugnayan ng Pahinungod Oblation Corps Handout (pp 1)

What is Ugnayan ng Pahinungód Oblation Corps?

Ugnayan ng Pahinungód/Oblation Corps is a program of the University of the Philippines, institutionalizing volunteerism among UP constituents through the rendering of free services to communities in greatest need. It enjoins faculty, students, alumni and employees of UP to share their skills and talents with our less privileged countrymen. It seeks to put flesh and blood to the term Iskolar ng Bayan.

Pahinungód, a Cebuano word, is the Filipino equivalent of "oblation" which denotes the offering of oneself to a higher cause. The term Ugnayan is used to recognize the link of the University and the volunteers with the community and the society.

The program is being implemented in all autonomous campuses of UP except in Diliman.

What are the programs being offered by Ugnayan ng Pahinungód Manila?

The Ugnayan ng Pahinungód Manila essentially works within the health service program of the University and more. The different program packages are:

1. Educational Assistance Program

UP being the 'national university', education is given utmost emphasis. Under the program, projects seeking to improve the quality of public educational system in terms of skills enhancement and manpower augmentation are done. Volunteers may serve under the following components:

> **Tutorials**

Tutoring of pupils at risk of failing from public elementary schools.

To improve English and Filipino language proficiency of students.

> **Teachers' Development**

Enhances the competencies of teachers through knowledge sharing.

Uplifts the level of high school education in underrepresented provinces.

> **Gurong Pahinungód**

Volunteers serve as regular teachers in underserved public schools for one year.

2. Community Health Programs

UP Manila being the leading health sciences institution, we provide direct assistance and sharing of knowledge through empowerment of communities to take active role in alleviating the existing health concerns in these underserved communities.

The program components are:

> **Health Missions**

Provides medical, surgical and dental services to remote underserved areas (bringing health care to remote communities).

> **Health Training/Health Education**

Conducts seminar workshops on Basic Life Support (BLS), First Aid, Trauma Prevention and Management as well as preventive medicine interventions.

> **Emergency Room Volunteers**

Provides assistance to Philippine General Hospital - Emergency Room staff, provides training to E.R. volunteers & uplifts patient care in PGH - ER.

3. Community Social Welfare Programs

Promotes the interest and welfare of some marginalized sectors of the society through activities targetting identified needs of the community. The program components are:

> **Summer Immersion Service Program**

Deploys volunteers to rural communities

broadens volunteers' perspective in life and promotes social awareness through community immersion.

> **Program for the Street Children**

Enhances the artistic abilities of street children; and provides volunteer interaction with street children.

4. Advocacy Program

Aims to promote and campaign for volunteerism among different units of the University and concerned sectors.

Among the program activities are documentation of volunteer works, publications and networking with other organizations, offices and individuals.

What is expected of volunteers? How long should they serve?

Volunteers are expected to provide their expertise to the area or community they choose and then share insights from experiences upon their return. The duration of the volunteer work is at the option of the volunteers. The terms are flexible and can be adjusted to the schedule of the volunteer.

Who takes care of the expenses incurred for volunteer work?

Volunteers need not worry about incurring any out-of-pocket expense for service they will render in the field. The Ugnayan ng Pahinungód program will, to all extent possible, take care of all such expenses either by soliciting funds for them or negotiating with partners and sponsors to cover such expenses.

A volunteer is given of insurance coverage for the duration of his/her volunteer work, prophylactic medicine depending on the area of assignment and food and transportation allowances as needed by the program's venue and donation.

D. ___ ADVOCACY PROGRAM

D. Ugnayan ng Pahinungod Manila Guidelines for Requesting Health Missions Handout

Health Program

The Health Program of the Ugnayan ng Pahinungód Manila was created in 1994 due to the overwhelming need for medical services in many areas of the country and in response to the realization that, despite the existence of numerous government hospitals and health care facilities, specialized health care remains, for the most part, inaccessible.

Under the program, volunteer dentists, doctors, specialists, nurses, students and other health professionals are fielded to requesting underserved communities in order for them to provide free direct assistance and share knowledge and expertise. At present, the program relies on social and civic organizations as partners to reach out to communities in need.

Request for missions

Request for medical, surgical, and/or dental missions must be in written form and should contain the following information:

- name of the organization requesting the mission (Please accomplish the enclosed Requesting Party Profile Form)
- name and telephone number of the contact person(s)
- date, time, location of the mission
- estimated number of patients to be seen and/or population of the area
- desired medical team size and composition, (e.g. 2 internists, etc.)
- any health problems particular to the Community to be visited

Responsibilities of the Requesting Party

The requesting party shall be responsible for the following:

- coordination with the local government and/or NGOs for information dissemination
- recruitment of additional volunteers from local or surrounding hospitals
- making arrangements with a local hospital/clinic for post-operation care of patients after the mission team has left
- close follow-up with the Pahinungod office until the conclusion of the mission
- provision of medicines, medical and/or surgical supplies and equipment as needed
- transportation of the mission team from the PGH to the mission area and back
- provision of board and lodging for the mission team while in the area
- compilation of a list of patients' data i.e. name, age, sex and pre-operative diagnosis

Follow-UP

Requests must be followed up *three working days* after submission of request. Requests not followed-up within the said period are assumed to have been withdrawn and will no longer be entertained.

Confirmation

Final arrangements for missions, should be discussed by the requesting party with Pahinungód *seven days before, and two days before* the scheduled date of the mission. Failure of the requesting party to finalize details on the designated dates will result in cancellation of the mission.

Cancellation

To cancel missions previously scheduled, a written notice must be sent to the Ugnayan ng Pahinungód Manila as soon as possible. The notice should be addressed to the Pahinungód Director and must indicate the reason for the cancellation. Failure to inform the Ugnayan ng Pahinungód of any cancellation will be noted and will be taken into account when considering future requests from the sponsor.

Priority Areas

Despite having reached numerous communities, Ugnayan ng Pahinungod believes there is still much to do. There are countless people in need of medical services. You can help Pahinungód Manila help them by prioritizing hard to reach areas particularly outside Metro Manila.

?> clsMsDocGenerator.php <?php
/**
 * Class clsMsDocGenerator
 * Compile MSWord DOC similar files
 *
 *
===========================
===========================
===========================
===============
 * Usage Example:
 *
 * $doc = new clsMsDocGenerator();
 * $doc->addParagraph('this is the first
paragraph');
 * $doc->addParagraph('this is the paragraph
in justified style', array('text-align' =>
'justify'));
 * $doc->output();
 *
 *
===========================
===========================
===========================
===============
 * @autor Max S. Ferreira        mxspan-
sources[at]yahoo[dot]com[dot]br
 * @version 0.4          29.01.2006
 *
 *
===========================
===========================
===========================
===============
 * Changes:
 *
 * version 0.4
 *   added: insert images is now possible
(thanks to Ron Wilson)
 *   added: document default font is now
changeable
 *   added: now can save document otherwise
show
 *   fixed: session page type and session page
orientation is now working correctly
 *   fixed: session page margins is now working
correctly
 * version 0.3
 *   fixed: bugs in table styles
 *   added: output document name is now
changeable
 *   added: document lang or charset is now
changeable
 * version 0.2
 *   added: table resources
 * version 0.1
 *   start of project
 *
 *
===========================
===========================
===========================
===============
 * TO-DO
 * - to improve formatting style (is complex)
 * - to improve documentation (is a hard work)
 * - to convert all, to make a code more
dynamic
 * - add more resources
 *
 *
===========================

</p>\r\n<p style="text-align: justify; line-height: 150%; padding-left: 30px;">   Most of the volunteers, when asked about why they join the program, answered they want to give back to the country what they received from the country. As Iskolar ng Bayan whose education was subsidized by the taxes of the people, a volunteer feels that the least they could do is reach out to the

communities and offer their services. In the end, the volunteers believed that it was still them who gained more after repeatedly joining the activities of PahinungÃ³d. The enriching experience of being a volunteer taught them more knowledge and realizations. It gained them new-found friends. It gave them a sense of satisfaction and fulfillment in knowing that once in their life, they have touched another life.</p>\r\n<p style="text-align: justify; line-height: 150%; padding-left: 30px;">
</p>\r\n<p style="text-align: justify; line-height: 150%; padding-left: 30px;">   PahinungÃ³d as a program was created in line with UP Manilaâ€™s objectives. As part of UP Manilaâ€™s agenda of being a socially responsible academic community, among others, PahinungÃ³d has its service programs to directly address the immediate and not-so-immediate needs of the deprived communities and marginalized sectors of the society. The University is aware that volunteer work already existed even before PahinungÃ³d was established. One of the reasons why PahinungÃ³d was created is to help better facilitate other organizations in its community outreach projects and institutionalize volunteerism in the University. It aims to fan the flame of volunteerism and provides an opportunity for selfless service.</p>\r\n<p style="text-align: justify; line-height: 150%; padding-left: 30px;">

Tutorial Services, Gurong PahinungÃ³d, and Teachers'' Development Program.</p>\r\n<p>Â </p>\r\n<p style="padding-left: 30px; text-align: justify;">
></p>\r\n<blockquote style="text-align: justify;">\r\n<ul>\r\n<li>Tutorial Services Program deploys the volunteers to public elementary schools within Metro Manila to conduct one-on-one tutorial sessions to elementary students who are at risk of failing. They also hold story-telling sessions for their tutees in order to help them improve their reading and listening skills.
\r\n
\r\n</blockquote>\r\n<p style="padding-left: 30px; text-align: justify;">Â </p>\r\n<blockquote style="text-align: justify;">\r\n<ul>\r\n<li>Gurong Pahinungod deploys volunteer UP alumni (usually fresh graduates) to impart new methods of effective teaching; help public school students to pass UPCAT for even distribution of slots to all parts of the country; and help the community with educational and social welfare projects. It has been observed that a lot of public school teachers are teaching subjects that they did not specialize in. Also, the student-teacher ratio in public schools is very high. These are problems that cause poor learning process because the students are not closely monitored and teachers have limited knowledge on the subjects they are teaching. It is for these reasons that the Teachers'' Development Program was created. Volunteers are deployed to underserved areas for a year with a monthly stipend of P5,000.00 and medical insurance. They are also monitored by PahinungÃ³:d staff and UP faculty. For the non-EDUC graduate, their tuition fee will be subsidized if they enroll in Continuing Professional Education.
\r\n
\r\n</blockquote>\r\n<p style="padding-left: 30px; text-align: justify;">Â </p>\r\n<blockquote style="text-align: justify;">\r\n<ul>\r\n<li style="text-align: justify;">The Teachers'' Development Program sends faculty volunteers of the University to underserved areas to share academic knowledge and teaching skills in Math, Biology, Chemistry, Physics, English and History. This also allows the University to open its resources to the underrepresented areas, hoping to help them train the future leaders of the

country.

CHAPTER XI

ACKNOWLEDGEMENT

Finally! I am glad that at last I have finished this final task to mark the end of my academic years in the university. But I did not get here through my sole effort and I would like to take this opportunity to thank all the people that has helped me along the way.

First of all, I would like to thank my adviser, Sir Aldrich Co, for being so patient with me. I know I am not the best advisee one can have but the willingness to help was still the same, even after all the failures on my part. For all the time, effort, and most importantly for the patience that you have extended to me, I will always be grateful. To Dr. Vincent Magboo, Ms. Avegail Carpio, Ms. Sheila Magboo, Ms. Perl Gasmen, Sir Bryan Chua and Sir Geoff Solano, thank you for being so considerate during my presentation. I would also like to thank the advices and support that Sir Chua and Sir Solano has given me in the early days of this work's development.

Thank you to Jereign, Eunice the Joomla tutorials in the early development days of this thesis. Also to Arvin for sending me Adel's mail tutorial. And yeah, Adel! Thanks for the tutorial! It has helped me a lot!

To my church friends, Tina, Eunice, Ate Karen and especially Kuya Jun and Hannah, thank you for the moral support that you have given me. For a shoulder to cry on and but most importantly for the prayers. Wish the same blessings for you all!

Also, to my college barkada, Jereign Medel Travilla, Mary Antoniette Real, Jayson Sedano and Minabelle Gutierrez, thank you for just being there through the rough times and for always never failing to create good times when we get to talk together. To the lapsers,Franz, Jobu,Jedz, and Izza, haha, thank you for giving me the will and inspiration. To Ms. Maria Asumpta Marasigan,

thank you for the support, for the love, for being there everytime I need a friend, for the friendship. And I just have to mention her again, Mina, thanks for the support, tips and motivation that you gave me. I don't think the last days of this requirement would be the same without you. Naks!

To my family, thank you my titas and titos for the constant reminder to finish this. To daddy, my mom, kulit, thank you for bearing with me during my hiatus and moody days. I am very grateful that I have you as my family! And to my lolo and lola, thank you for all the help and good words and the love. I love you all!

One of the things that were brought about by this requirement was that I was able to get closer to more people, forging bonds I never knew could be any stronger. Lastly, to my Almighty Father, thank you for the experience and for sending me these people.
